RE: Final Report of Activity

The Graduate Curriculum Committee met twice monthly throughout the 2004-2005 academic year to discuss seventeen graduate curriculum proposals. The bulk of our curriculum review consisted of revisions to courses within existing programs in order to deliver current knowledge and skills. New courses were reviewed and accepted from various departments across colleges.

Three proposals asked for consideration of new programs: Doctor in Physical Therapy Program, Middle School Mathematics Certificate Program and an online option for the CSDA program. The Committee supported further work on each of the new program proposals.

The Committee reviewed a proposal for a web-based LX form process. The committee raised initial concern for lockout of submitted LX forms and workflow for the process, but supported further investigation into the new format/process development.
