How Many SMART BOARDS?

"How many smart boards does it take to change a light bulb?"

"It sure beats me. What's the answer?"

"None, stupid. It takes a human to do that. We can only change classrooms, not light bulbs."

The cartoon depicts three square smart boards with faces standing on a checkered floor. A light bulb hangs from the ceiling above them. A sign above the boards asks, "How Many SMART BOARDS?". The dialogue below shows one board asking the question, another board responding that it's a tough one, and a third board replying that it takes a human to change a light bulb, not smart boards.
