

Math Club

Calling all Models!

Mathematical Modelers that is!

Thursday Oct. 8th
5pm in 102 Cowley Hall

How can we use the stuff we learn in our math classes to model real world applications? Dr. Bennie, Dr. Wendt, and Dr. Peirce will present at least three different mathematical models. They will talk about the modeling process: how to make good assumptions, how to describe observations mathematically, and how to check our model for accuracy.

There are many outstanding opportunities for you to create your own models of real world applications. If you want to learn more, come to the meeting!

Cookies and soda will be provided.
