IS 220 Course Learning Objectives

Information Systems for Business Management

At the completion of this course, the student will be able to:

- Understand the vital role played by information systems in supporting and facilitating business activities.
- Recognize the technical underpinnings of information systems: including software, hardware, data, people, networks, and security.
- Form knowledgeable opinions on the ethical, legal and moral challenges facing a digital society.
- Apply spreadsheet and database applications to support business decision making.
