

Since 2009, the Gateway to the Atlantic International Archaeological Field School has served as a focal point for interdisciplinary, cooperative research and teaching by scientists from the UK and USA.

Human Ecodynamics – past, present, future

We use the results of our studies to aid in present issues of Sustainability. Humans faced climate change and rising sea levels in the past, and we can learn from their responses to such changes. Understanding how they adapted will help us make sustainable choices in our future.

The Pictish anvil. Look at the handprints! The first of its kind...we made news in 2018 when we removed this from the smithy. See Smithsonian online: <https://www.smithsonianmag.com/smart-news/1000-year-old-handprint-europes-lost-people-discovered-scotland-180969752/>

See our Blog and find other great info about the site: <https://www.swandro.co.uk/>

The 4,500 year old Neolithic chambered tomb when first discovered in 2012. Today, it's proving to be quite an amazing structure! With your help, we'll be getting into the middle in 2019.
