

## **Student Supervision Policy**

The medical dosimetry student must be supervised by a qualified practitioner (e.g., certified medical dosimetrist, credentialed medical physicist, licensed radiation oncologist) during all procedures that have direct patient contact.

All clinical procedures/tasks (e.g. dose calculations, treatment plans, etc.) performed by the students must be approved by a qualified practitioner prior to implementation.

I have read and agree to abide by the Student Supervision policy as stated above.
