

We are a not-for-profit organization providing state-of-the-art outpatient medical, academic, and developmental rehabilitation to North Texas and Southern Oklahoma. From the Early Childhood Intervention program to our Aquatics programs, these services are designed to help our patients achieve their highest level of independence.

Cutting edge equipment and therapy practices, combined with a caring attitude, create an environment in which excellent outcomes are the norm. In a world where accidents occur, and friends, family, and neighbors sometimes face the challenges of disabilities and the effects of diseases, our team has led the way to a better tomorrow for each and every client for more than 60 years.

The OT position is a mixture of pediatrics, general adult, and lymphedema clients.

Principles of Treatment:

Treatment is based on four principles:

- pain reduction
- neurological rehabilitation
- improved range of motion
- increased strength

Treatments:

- Stroke
 - Joint Replacement
 - Orthopedic/Sports Injuries
 - Back and Neck Injuries
 - Progressive Neurological Diseases (Parkinson's, Multiple Sclerosis, etc.)
 - Amputations
 - Repetitive Trauma
 - Arthritis Pain and Stiffness
 - Visual Perception/Loss of coordination/Falls
 - Work-site Assessments and On-site Training
- We also feature a state-of-the-art Balance & Mobility Center featuring the NeuroCom system. This system examines all the components involved in maintaining balance: eyes, inner ear and muscles and joints, and can determine whether one or more are abnormal. National studies have found that 80 to 90 percent of people with these problems can benefit from vestibular and/or balance therapy.

Children receiving physical therapy services get individual attention and group treatments focused on improving motor skills, range of motion, strength, balance and other skills. The program also includes our sports injury clients and traumatic injuries (car accidents) as well as developmental disabilities. The setting is age appropriate.
