This Appendix provides background information on hazardous waste laws and their application at UWL. Environmental Health and Safety assists the campus with compliance through internal inspections, record keeping, and proper disposal. In Wisconsin, the Department of Natural Resources (DNR) has adopted U.S. Environmental Protection Agency (EPA) regulations. The EPA and DNR regulations are nearly identical.

This Appendix only deals with “hazardous waste” as it is defined by the EPA and DNR. Legally, EPA defines hazardous waste to include certain code specified hazardous ***chemical*** waste.

To limit the scope of this Appendix, this Appendix does not address other dangerous waste from laboratories, such as infectious, biological, radioactive, or sharps waste. Part H of this Guide describes disposal procedures for animals and Part I describes disposal procedures for sharps and other waste that can cause physical hazards.

EPA regulations focus on industrial waste types. As a result, many laboratory chemical wastes are not regulated by EPA as hazardous chemical waste. However, many unregulated chemical wastes do merit special handling and disposal procedures, so Part G and Appendix A of this Guide require the disposal of many unregulated wastes as if they were EPA hazardous wastes.

Contact Environmental Health and Safety for any questions you have related to proper disposal of wastes generated in UWL laboratories.

## **IMPORTANT WASTE DEFINITIONS**

Hazardous waste is a specific legal term established by EPA and DNR regulations. In order to define “hazardous waste”, there is value in first knowing how to define “hazardous material” and “waste”.

A hazardous material is any material or substance that, if improperly handled or disposed, could be damaging to the health and well-being of people or the environment.

Hazardous materials are a general category of chemicals that do not necessarily mean waste materials.

A waste material is any material or substance that is no longer wanted and cannot be either redistributed, recycled, or used in any other manner.

Contact Environmental Health and Safety if you require assistance with determining if a waste is hazardous waste.

You might think that a hazardous waste is a hazardous material that cannot be redistributed, recycled, or reused, but you would be wrong. Hazardous waste is a legally defined term that is not as obvious as you might think. While all hazardous wastes are hazardous chemicals, not all unwanted hazardous chemicals meet the legal definition of hazardous wastes.

Under the 1976 Federal Resource Conservation and Recovery Act (RCRA) and amendments to the Act, a hazardous waste is generally defined as any waste that exhibits certain hazardous characteristics such as ignitability, corrosivity, reactivity, or toxicity. In addition, a hazardous material can be considered a hazardous waste if it is listed on one of four lists included in the EPA/DNR regulations. The lists include a variety of toxic chemicals, acutely toxic chemicals, and chemicals from specific and non-specific processes.

For further information, see the United States Environmental Protection Agency regulations in the Code of Federal Regulations - 40 CFR part 261, or the Wisconsin Department of Natural Resources Regulations in Wisconsin Administrative Code - Chapters NR600-699.

## **CATEGORIES OF CHARACTERISTIC HAZARDOUS WASTES**

A hazardous waste includes any waste that exhibits one or more of the four hazardous characteristics of ignitability, corrosivity, reactivity, or toxicity.

### **Ignitable**

A waste is ignitable if it has any of the listed properties.

1. A liquid, other than an aqueous solution containing less than 24% alcohol by volume, and has a flash point less than 60 degrees C (140 degrees F);
2. not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard;
3. an ignitable compressed gas; or
4. an oxidizer.

Ignitable chemical examples include, but are not limited to acetone, white phosphorus, and benzoyl peroxide.

### **Corrosive**

A waste is corrosive if it has any of the listed properties.

1. Aqueous and has a pH less than or equal to 2 or greater than or equal to 12.5; or
2. a liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 mm (0.250 inch) per year at a test temperature of 55 degrees C (130 degrees F).

Corrosive chemicals include, but are not limited to hydrochloric acid and ammonium hydroxide.

### Reactive

A waste is reactive if it has any of the listed properties.

1. The material is normally unstable and readily undergoes violent change without detonating;
2. reacts violently with water;
3. forms potentially explosive mixtures with water;
4. generates toxic gases, vapors or fumes, when mixed with water, in a quantity sufficient to present a danger to human health or the environment;
5. is a cyanide or sulfide bearing waste, which, when exposed to pH conditions between 2 and 12.5, can generate toxic gases, vapors or fumes in a quantity sufficient to endanger human health or the environment;
6. is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement;
7. is readily capable of detonation or explosive decomposition at standard pressure and temperature; or
8. is a Class A, Class B, or forbidden explosive.

Reactive chemicals include, but are not limited to lithium metal, sodium polysulfide, trinitrotoluene, and nitroglycerine.

### Toxic

EPA hazardous waste includes any waste that fails the Toxicity Characteristic Leachate Procedure (TCLP). This procedure simulates the ability of a compound to leach out of a landfill into groundwater. Any material that you dispose that contains any of the following listed chemicals is a hazardous waste if the concentration exceeds the value included in parentheses after the chemical name. All values are in milligrams/liter (mg/L). Dilution cannot be used to lower the chemical concentration in the waste.

The TCLP test is a multi-step procedure involving extraction, filtration and, in the case of some organic analysis, a second extraction before analysis.

### Toxicity Characteristic Chemicals

Arsenic (5.0)	1,4-Dichlorobenzene (7.5)	Methyl Ethyl Ketone (200.0)
Barium (100.0)	1,2-Dichloroethane (0.5)	Nitrobenzene (2.0)
Benzene (0.5)	1,1-Dichloroethylene (0.7)	Pentachlorophenol (100.0)
Cadmium (1.0)	2,4-Dinitrotoluene (0.13)	Pyridine (5.0)
Carbon Tetrachloride (0.5)	Endrin (0.02)	Selenium (1.0)
Chlordane (0.03)	Heptachlor (and its epoxide) (0.008)	Silver (5.01)
Chlorobenzene (100.0)	Hexachlorobenzene (0.13)	Tetrachloroethylene (0.7)
Chloroform (6.0)	Hexachlorobutadiene (0.5)	Toxaphene (0.5)
Chromium (5.0)	Hexachloroethane (3.0)	Trichloroethylene (0.5)
m-Cresol (200.0)	Lead (5.0)	2,4,5-Trichlorophenol (400.0)
o-Cresol (200.0)	Lindane (0.4)	2,4,6-Trichlorophenol (2.0)
p-Cresol (200.0)	Mercury (0.2)	2,2,5-TP (Silvex) (1.0)
Cresol, total (200.0)	Methoxychlor (10.0)	Vinyl Chloride (0.2)
2,4-D (10.0)		

Note: Values in parentheses are in milligrams/Liter (mg/L)

**Practical Applications of TCLP:** Testing a waste material to see if it exhibits the characteristic of toxicity can be very expensive. If a waste contains a toxicity characteristic chemical, and it is a small volume, we assume that it is an EPA hazardous waste. If you generate a large volume of waste containing toxicity characteristic chemicals, contact Environmental Health and Safety to coordinate sample collection and analysis to determine if it is an EPA hazardous waste exhibiting characteristic of toxicity.

An unwanted laboratory chemical or other hazardous materials is a hazardous waste if the waste is ignitable, corrosive, reactive, or if it fails TCLP.

## **LISTED EPA HAZARDOUS WASTES**

By definition, EPA hazardous waste includes hazardous wastes from non-specific sources and discarded commercial chemical products that are listed as acute hazardous wastes (Table IV) and toxic wastes (Table V). EPA lists these chemicals as hazardous waste based primarily on toxicity. In order for substances included on these lists to be hazardous wastes, they must have any of the properties.

- Unused and pure substances or the sole active ingredient.
- Spill residue.
- The unused rinsate from triple rinsing any Table IV acute hazardous waste (P-code) containers. After triple rinsing the container can then be placed in the normal trash.
- Any container containing the pure unused and pure substance or sole active ingredient of any Table IV hazardous waste (P-code) that has not been triple rinsed.

An alphabetical compilation of the lists is included at the end of this appendix.

## **STORAGE OF HAZARDOUS WASTE**

The storage of EPA hazardous waste should first adhere to the guidelines for safe storage of chemicals, as explained in Part D of this Guide.

Additional EPA requirements for accumulation of hazardous waste in laboratories (otherwise known as satellite accumulation) follow. All EPA hazardous waste containers must have any of the listed properties.

- Be clearly marked “Hazardous Waste”.
- Be stored close to where the waste is generated.
- Stored in a secure area that you have supervision over (i.e. not in the hallway).
- Be securely capped except when waste is being added. This will reduce the risk of fire, your exposure to toxic chemicals, and spills in case the container is tipped. This also prevents the illegal disposal of waste by evaporation.
- If a container holding hazardous waste begins to leak, the contents must be transferred immediately to another container.

## **WASTE VS. SURPLUS CHEMICALS**

Most laboratory chemicals that are unwanted, unused, sealed, properly labeled, and not past a labeled storage date are not necessarily waste. Such unused or unwanted chemicals can be used by others. When

Environmental Health and Safety removes a chemical from your laboratory, we examine it to determine if others on campus can use the material. The surplus chemical only becomes a waste if no other laboratory is likely to accept the surplus chemicals. You can also work with and provide unwanted chemicals directly with your colleagues.

Please do not mark a surplus chemical as a “waste” unless you are certain it is not usable. Contact Environmental Health and Safety to request “Unwanted Chemical” labels. One exception to identifying material as waste is when your lab places waste chemicals in carboys or other waste containers. Because these used wastes are difficult to reuse, they are designated as a waste when they are generated in your laboratory. All Environmental Health and Safety provided carboys and other containers are tagged with the words “Hazardous Waste”.

On occasion, you may generate other wastes that cannot be reused. If so, please label these as “Unwanted Chemicals”. These labels are available from your department stockroom or Environmental Health and Safety. Environmental Health and Safety will determine if a waste is regulated as an EPA hazardous waste.

Please do not mark a surplus chemical as “hazardous waste” unless requested to do so by Environmental Health and Safety. Most waste laboratory chemicals should be labeled with “Unwanted Chemical” labels.

## **PROHIBITED DISPOSAL METHODS**

According to Federal and State law, hazardous waste must not be disposed of by the following methods.

- Hazardous waste must not be disposed in the normal trash, garbage cans, refuse bins, recycling bins, sharps containers, or infectious waste bags.
- Hazardous wastes must not be disposed by evaporation.
- Hazardous waste must not be disposed of or managed by dilution. If hazardous wastes are diluted or combined with a non-hazardous material, the larger volume is regulated as an EPA hazardous waste.

Only dispose of chemicals according to the procedures in **Part G** of this Guide.
