(All colleges)

23 credits

Code	Title	Credits
Core		
CHM 103	General Chemistry I	5
CHM 104	General Chemistry II	5
CHM 301	Analytical Chemistry	5
Select one of the following:		5-8
Option A (8 credits)		
CHM 303 & CHM 304 & CHM 305	Organic Chemistry Theory I and Organic Chemistry Theory II and Organic Chemistry Laboratory	
Option B (7 credits)		
CHM 303 & CHM 304 & CHM 302	Organic Chemistry Theory I and Organic Chemistry Theory II and Fundamental Organic Chemistry Laboratory	
Option C (5 credits)		
CHM 300 & CHM 302	Fundamental Organic Chemistry and Fundamental Organic Chemistry Laboratory	
Select three additional credits in chemistry at the 300-level or above.		3
CHM 489 and CHM 499 may not count toward this requirement.		
Total Credits		23-26

Clinical Laboratory Science Program (CLI)

College of Science and Health
Department of Microbiology
Program Director: Michael Lazzari
3003 Cowley Hall, 608.785.6479

Email: mlazzari@uwlax.edu

www.uwlax.edu/microbiology/clinical-laboratory-science/what-is-a-clinical-laboratory-scientist/ (<https://www.uwlax.edu/microbiology/clinical-laboratory-science/what-is-a-clinical-laboratory-scientist/>)

Clinical laboratory scientists perform complex biological, microbiological, and chemical tests on patient samples. They also use, maintain, and troubleshoot sophisticated laboratory equipment that is used to perform diagnostic tests. Clinical laboratory scientists analyze these test results and discuss them with the medical staff. They also possess the skills required for molecular diagnostic tests based on DNA and RNA technologies. In addition, they find opportunities in test development, experimental design, administration, and education.

The curriculum requires a minimum of six semesters and a summer session on campus to complete the pre-professional and pre-clinical courses. Students spend an additional nine months of clinical education in a hospital-sponsored, accredited program during their senior year. A Bachelor of Science degree is awarded at the satisfactory completion of all required course work.

General education writing emphasis

This department incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete a major in this department will fulfill the general education writing emphasis requirement (p. 66).

Majors

- Clinical laboratory science - BS (p. 430)

Dual degree program

- Dual degree program in clinical laboratory science and clinical microbiology (p. 433)

Clinical Laboratory Science - Bachelor of Science (BS)

Major requirements

(College of Science and Health)

Clinical laboratory science admission policy

Admission to the clinical laboratory science major is on a competitive basis. Students apply for admission early in the spring semester of the academic year just prior to the beginning of their professional studies, typically in the sophomore year. Formal acceptance into the major, effective at the beginning of the fall semester, is based on the submission of an application for admission to the major, personal recommendations, review of academic performance, and an interview with the program admission committee. A minimum cumulative grade point average of 2.75 is strongly recommended.

Admission to clinical requirement

The application process for the clinical year in the hospital-sponsored program is similar to the process required for acceptance to the clinical laboratory science major. Acceptance into the hospital program is not

guaranteed by the university. The hospital programs affiliated with UWL are accredited by the National Accrediting Agency for Clinical Laboratory Sciences (NAACLS).

During the clinical component, in an accredited hospital program, students will register for (or be allowed to transfer in from Mayo's CLS program) the equivalent of, at minimum, 31 UWL credits. The clinical phase routinely begins in late August with anticipated graduation the following spring. Graduates of the program are eligible to sit for certification examinations offered by national certification agencies.

NAACLS accredited hospital affiliates of UWL:

- Hennepin Healthcare, Minneapolis, Minn.
- Marshfield Laboratories, Marshfield, Wis.
- Aspirus Wausau Hospital, Wausau, Wis.
- Ascension St. Elizabeth Hospital, Appleton, Wis.
- Mayo Clinic, College of Medicine and Science, School of Health Sciences, Rochester, Minn.¹

UWL is affiliated with the University of North Dakota, an accredited program, which provides access to many other hospital affiliates throughout the upper Midwest.

¹ Clinical laboratory science students who select to complete the required year-long clinical at the Mayo School of Health Sciences (MSHS) enroll at MSHS rather than at UW-La Crosse. The courses taken during the year-long clinical at MSHS meet UW-La Crosse CLI program requirements. The student must request an official transcript be sent to UW-La Crosse from MSHS. Upon successful completion of the clinical and all other graduation requirements, the students are awarded the Bachelor of Science degree from UW-La Crosse. The Mayo School of Health Sciences (MSHS) grants a Certificate of Completion in Clinical Laboratory Science.

Graduation requirements

Core courses in the pre-professional curriculum must be completed with a grade of "C" or above. UWL students must meet all university graduation requirements including those for general education, college core, and university degree requirements. However, students in the clinical laboratory science major are exempt from the College of Science and Health core requirements.

Curriculum

93-105 credits including clinical phase

Pre-professional curriculum (39-46 credits)

All pre-clinical lab science program majors are strongly encouraged to take CLI 120 Introduction to Clinical Laboratory Science.

Code	Title	Credits
Biology core:		
BIO 105	General Biology	4
BIO 306	Genetics	4
BIO 312	Human Anatomy and Physiology I	4
BIO 313	Human Anatomy and Physiology II	4
Chemistry core:		
CHM 103	General Chemistry I	5
CHM 104	General Chemistry II	5
Select one of the following:		5-8

CHM 300 & CHM 302	Fundamental Organic Chemistry and Fundamental Organic Chemistry Laboratory	
CHM 303 & CHM 304 & CHM 302	Organic Chemistry Theory I and Organic Chemistry Theory II and Fundamental Organic Chemistry Laboratory	
CHM 303 & CHM 304 & CHM 305	Organic Chemistry Theory I and Organic Chemistry Theory II and Organic Chemistry Laboratory	
Microbiology core:		
MIC 230	Fundamentals of Microbiology	4
Math core:		4-8
MTH 150	College Algebra (or placement above MTH 150)	
STAT 145	Elementary Statistics	
Total Credits		39-46

Pre-clinical lab science program students must have completed a substantial portion of these requirements in the semester that they apply for formal admission to the clinical lab science program major. Students who lack only a few credits are encouraged to consult the clinical lab science program advisor to determine when they should apply.

Professional curriculum (54-59 credits)

Code	Title	Credits
Preclinical phase (on campus):		
CLI 395	Urinalysis and Body Fluids	2
CLI 410	Clinical Hematology	3
CLI 420	Immunochemistry	3
CLI 440	Clinical Parasitology	1-4
or BIO 406	Parasitology	
CLI 461	Capstone in Clinical Laboratory Science	1
MIC 310	Immunology	3
MIC 407	Pathogenic Bacteriology	4
MIC 410	Immunology Laboratory	2
Select one of the following:		4-6
CHM 325	Fundamental Biochemistry	
CHM 417 & CHM 418	Biochemistry I: Macromolecules and Biochemistry II: Metabolism and Genetic Information	
Clinical phase (at an accredited hospital):		
CLI 450	Clinical Chemistry	6
CLI 455	Clinical Hematology/Hemostasis	6
CLI 460	Clinical Immunochemistry	6
CLI 465	Clinical Immunology	2
CLI 470	Diagnostic Microbiology	8
CLI 480	Laboratory Management and Education	3
Total Credits		54-59

The following courses are recommended to complement the clinical laboratory science major:

Code	Title	Credits
CLI 484	Laboratory Management	2
MIC 420	Introductory Virology	3
MIC 421	Virology Laboratory	2
BIO 413	Medical Mycology	3
BIO 435	Molecular Biology	3

BIO 436	Molecular Biology Laboratory	1
BIO 466	Human Molecular Genetics	3
BIO 424	Human Endocrinology	3
CLI 495	Independent Study in Medical Laboratory Science	1-3
CLI 496	Special Topics in Clinical Laboratory Science	1-3
MIC 416	Prokaryotic Molecular Genetics	4
MIC 454	Mechanisms of Microbial Pathogenicity	2
ECO 110	Microeconomics and Public Policy	3
PHL 201	Ethical Theory and Practice	3

Degree requirements

All students must complete the general education, college core (waived for clinical laboratory science majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 432)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Two sample plans are provided below. The first plan is for students who have placed into MTH 151 Precalculus or higher, and the second example is for students who need MTH 150 College Algebra in their first semester.

Sample Plan 1 - students who placed into MTH 151 or higher

Year 1

Dual Degree Program in Clinical Laboratory Science and Clinical Microbiology

Major requirements

The Dual Degree Program in Clinical Laboratory Science and Clinical Microbiology enables a UWL student to earn both a Bachelor of Science degree in clinical laboratory science (CLS) and a Master of Science degree in microbiology with emphasis in clinical microbiology in six years.

After students have been accepted into the CLS Program and completed 90 undergraduate credit hours, they may be accepted into the dual degree program. Students must maintain a 3.00 GPA to remain in the program. The Bachelor of Science degree will be awarded after completion of 120 undergraduate credits, the CLS major requirements, and the general university requirements. Students must have graduate student status before registering for their third graduate course (normally in the second semester of their senior year). The Master of Science degree will be awarded after completion of the B.S. and M.S. requirements.

Contact the Department of Microbiology (<http://www.uwlax.edu/microbiology/>) for application information. See the online graduate catalog (<http://catalog.uwlax.edu/graduate/programrequirements/microbiology/>) for more information about the program.

Dual degree timeline:

- Sophomore (spring semester): apply to the CLS Program
- Junior (fall semester): apply to the hospital-sponsored program for clinical year
- Junior (summer after): apply to the dual degree program. Applications due July 1.
- Senior: admitted students apply for graduate special status in order to register for CLI 570 and CLI 580
- Senior (May): students have completed the undergraduate portion of the program upon completion of the clinical internship. After the clinical internship, students register for graduate classes.

Curriculum

Required courses for the Bachelor of Science

1

Students in this dual degree program should complete the following by the end of their junior year.

Foundational science courses

Code	Title	Credits
Biology core:		
BIO 105	General Biology	4
BIO 306	Genetics	4
BIO 312	Human Anatomy and Physiology I	4
BIO 313	Human Anatomy and Physiology II	4
Microbiology core:		
MIC 230	Fundamentals of Microbiology	4
MIC 310	Immunology	3
MIC 407	Pathogenic Bacteriology	4
MIC 410	Immunology Laboratory	2
Chemistry core:		
CHM 103	General Chemistry I	5
CHM 104	General Chemistry II	5
Select one of the following:		5-8
CHM 300 & CHM 302	Fundamental Organic Chemistry and Fundamental Organic Chemistry Laboratory	
CHM 303 & CHM 304 & CHM 302	Organic Chemistry Theory I and Organic Chemistry Theory II and Fundamental Organic Chemistry Laboratory	
CHM 303 & CHM 304 & CHM 305	Organic Chemistry Theory I and Organic Chemistry Theory II and Organic Chemistry Laboratory	
Select CHM 325 OR CHM 417 and 418:		4-7
CHM 325	Fundamental Biochemistry	
CHM 417 & CHM 418	Biochemistry I: Macromolecules and Biochemistry II: Metabolism and Genetic Information	
Math core:		
MTH 150	College Algebra	4
STAT 145	Elementary Statistics	4
Total Credits		56-62

Junior & senior year courses

Code	Title	Credits
Clinical laboratory science core:		
CLI 395	Urinalysis and Body Fluids	2
CLI 410	Clinical Hematology	3
CLI 420	Immunohematology	3
CLI 461	Capstone in Clinical Laboratory Science	1
CLI 440	Clinical Parasitology	1
At clinical internship site (senior year), including graduate credits:		
CLI 450	Clinical Chemistry	6
CLI 455	Clinical Hematology/Hemostasis	6
CLI 460	Clinical Immunohematology	6
CLI 465	Clinical Immunology	2
Graduate credits: ¹		11
CLI 570	Diagnostic Microbiology	
CLI 580	Laboratory Management and Education	
Total Credits		41

¹ Graduate level credit credits do not count toward the 120 credits needed for an undergraduate degree, but do satisfy major requirements. Undergraduates will be taking 11 graduate credits total while still undergraduate students.

After completing the coursework listed above, all general education requirements, and all other college and university degree requirements, students in the dual degree program will be awarded the Bachelor of Science with a major in clinical laboratory science. At the start of their final semester of undergraduate work, dual degree students must apply for admission to graduate school at UWL in order to register for the graduate courses required for the Master of Science degree.

Required courses for the Master of Science

Students must complete the following in order to earn the Master of Science in microbiology with emphasis in clinical microbiology:

Code	Title	Credits
CLI 570	Diagnostic Microbiology (applies to both BS and MS)	8
CLI 580	Laboratory Management and Education (applies to both BS and MS)	3
MIC 554	Mechanisms of Microbial Pathogenicity	2
MIC 753	Epidemiology of Infectious Disease	2
MIC 755	Advanced Immunology	2
MIC 751	Graduate Seminar	1
MIC 751	Graduate Seminar	1
MIC 780	Clinical Microbiology Practicum II	2
MIC 790	Clinical Microbiology Practicum III	2
MIC 799	Research: Master's Thesis	6
Electives		4
Total Credits		33

Degree requirements

All students must complete the general education, college core (waived for clinical laboratory science majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 434)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}

5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA¹,² in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete,

to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

MIC 753	2	MIC 780	2-4
MIC 755	2	MIC 790	2
MIC 751	1	MIC 799	6
Electives	4		
	11		11

Total Credits: 151

¹ At the start of the final semester of the undergraduate work, students must file an application for admission to graduate school at UWL in order to register for the graduate level courses required for completion of the Master of Science degree.

Computational Science Program (CMP)

In many scientific disciplines, direct computation has become the tool of first choice for studying and simulating phenomena. Adequate preparation for graduate study in the sciences now includes a background in computation. Moreover, undergraduates seeking employment with corporations involved in applying science often find themselves confronted with day-to-day use of computational methods.

The minor in computational science provides students an opportunity to distinguish themselves by augmenting their scientific studies with a background in computation. Similarly, computer science and mathematics students will be provided a new option to study scientific applications of their fields. The computational science minor is highly interdisciplinary, combining the study of computer science and mathematics with the study of specific problems in the sciences and the computational methods required for their solution. This minor is one of a handful in the U.S. at this time.

Minor

- Computational science minor (p. 436)

Computational Science Minor

Minor requirements

(All colleges)

34-39 credits

Code	Title	Credits
CS 120	Software Design I	4
CS 220	Software Design II	4
CMP 390	Survey of Computational Science	3
CMP 490	Senior Computational Science Project	2-3
MTH 207	Calculus I	5
MTH 208	Calculus II	4
	or STAT 405 Statistical Methods	

Additional requirements: 12-16

1. One two-semester introductory sequence in natural science (BIO, CHM, ESC or PHY)

2. Two courses in natural science (BIO, CHM, ESC, PHY) not from the same department as the preceding sequence

3. One computational science advanced elective from the student's primary major department

4. One computational science advanced elective from outside the primary major department

Total Credits

34-39

Computer Science Department (CS/CPE/CT)

College of Science and Health

Department Chair: Kenny Hunt

221 Wing Technology Center; 608.785.6805

Department Email: compsci@uwlax.edu

www.cs.uwlax.edu (<http://www.cs.uwlax.edu/>)

Software is an integral part of our society in both visible and invisible ways. Take a look at some of the modern conveniences of our life: cell phones, video games, medical imaging systems, and engines. The way we interact with information through software leaves very little that computer science does not touch. In computer science, students will learn the foundational material for software development, computer systems, and theory of computation so they, too, can harness the power of computers to solve the world's problems. This creative discipline is for anyone who wishes to work hard and use logic, software, and hardware to solve problems.

We think there is no better place to pursue your degree than UWL. Small class sizes and accessible professors give students a level of attention not available on larger campuses. We have outstanding faculty who have many different interests, but who all share a love for teaching. A history of talented students, great facilities and undergraduate research opportunities, make for an ideal learning environment. The department is the second oldest in Wisconsin, only behind Madison, and has a fine reputation within the computing industry for over 50 years.

The job market for computer scientists has always had plenty of opportunities and the demand continues. The National Bureau of Labor Statistics, in its rolling ten-year horizon Occupational Outlook Handbook, consistently projects the software industry to be among the fastest growing sectors of the economy.

Computer Science internship policy

Students majoring in computer science who wish to enroll in CEI 450 Cooperative Education/Internship (1-15 cr.) or CEI 475 University-wide Cooperative Education Internship (3-15 cr.), University Internships, must have completed 15 credits of computer science course work, including CS 220, and must have a minimum GPA of 2.50 in computer science courses to be eligible for departmental approval and supervision. Credits earned in internships do not apply to major or minor requirements.

General education writing emphasis

This department incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete a major in this department will fulfill the general education writing emphasis requirement (p. 66).

2022-23 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

Majors

- Computer engineering major - BS (p. 438)
- Computer science major - BS (p. 440)
- Computer science major: computer engineering technology emphasis - BS (p. 443)
- Computer science major: cybersecurity emphasis - BS (p. 444)
- Computer science major: embedded systems emphasis - BS (p. 447)

Dual degree programs

- Dual degree program in computer science and master of software engineering (p. 452)
- Dual degree program in computer science: cybersecurity emphasis and master of software engineering (p. 454)
- Dual degree program in computer science: embedded systems emphasis and master of software engineering (p. 457)
- Dual degree program in computer science and engineering (p. 450)

Minors

- Computer science minor (p. 459)

Computer Engineering Major - Bachelor of Science (BS)

Have you ever seen pictures of computer chips, circuit boards, wires, and wondered how these machines work? For students that enjoy math and physics, have a keen attention to detail, think logically, and enjoy a challenge, the **computer engineering major** at UWL might be a perfect fit.

Computer engineers develop new computer hardware systems and write the software to support these systems. Students will take classes in software development, digital and analog circuit design, hardware/software integration, and will complete a year-long senior project within a team of other well-trained computer engineering students.

Graduates will be experts in writing low-level systems software and experts in digital circuit design - subfields of computer science and electrical engineering, respectively. This new program at UWL leverages existing expertise and courses within the computer science department, as well as in the physics department. Additionally, several new courses specific to engineers will round out the curriculum.

The computer science department at UWL has an over 50 year history of delivering innovative curriculum, and their computer engineering program continues that tradition. The program includes a course sequence culminating in a senior level virtual machines offering. A virtual machine uses one computer to pose as another. Virtual machines are important because they are the backbone of the cloud, they help in making secure systems, and they make computers compatible with other systems and software. For efficient virtual machines, both hardware and software need to be finely-tuned - making this a perfect topic for computer engineers. While a few other universities have virtual machines as an elective topic, UWL is the only known undergraduate program to require topics in virtual machines - making graduates highly desirable to employers.

Nationwide, computer engineering graduates are employed in a wide variety of industries, not just at companies that research and develop computers. Automotive, aerospace, medical equipment, agriculture equipment, defense, renewable energy, home and office appliance, manufacturing automation, and many other industries employ computer engineers. Anywhere you find a computer integrated into a product, you'll find computer engineers. Computer engineers find careers in most regions of the United States, and across the world. Upon entering the field, computer engineers also enjoy salaries that are at the upper end of starting salaries for 4-year graduates in any discipline.

Major requirements

(All colleges, excluding teacher certification programs)

63 credits (96 total credits including MTH, STAT, PHY requirements)

Code	Title	Credits
Core		
CPE 105	Introduction to the Computing Environment	1

Total Credits 63

In addition to the 63 credits, the below prerequisite courses must be taken:

Code	Title	Credits
Prerequisite courses		
CS 120	Software Design I	4
CS 220	Software Design II	4
MTH 207	Calculus I	5
MTH 208	Calculus II	4
MTH 308	Linear Algebra with Differential Equations	4
PHY 203	General Physics I	4
PHY 204	General Physics II	4
STAT 245	Probability and Statistics	4
Total Credits		33

¹ May substitute MTH 225 for CS 225.

² CPE 498 Senior Capstone (2 cr.) must be taken in sequential semesters, starting in the fall.

Students in this major are exempt from the College of Science and Health core requirements.

Degree requirements

All students must complete the general education, college core (waived for computer engineering majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 439)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.

6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

Year 1

¹ PHY 203 is only offered in the fall.² PHY 204 is only offered in the spring.³ May substitute MTH 225 for CS 225.⁴ CPE 498 must be taken in sequential semesters, starting in the fall.

Computer Science Major - Bachelor of Science (BS)

Computer science is a broad and very useful discipline that many other fields of study depend on. Computer science is the study of computing

systems and the software processes that control them. Computer scientists have developed powerful algorithms in the areas of artificial intelligence, data mining, machine learning, computer vision, security, and a host of other areas. These algorithms are then used for medical imaging, stock market analysis, computer graphics, video processing, and many other fields. The emphasis within the computer science program is on software development and includes a strong variety of electives to allow students to study specific areas of personal interest.

Major requirements

(All colleges, excluding teacher certification programs)

45 credits (54 total credits including MTH requirements)

Code	Title	Credits
CS 120	Software Design I	4
CS 220	Software Design II	4
CS 225	Discrete Computational Structures ¹	3
CS 270	Introduction to Assembler Programming, C Programming and Computer Organization	3
CS 340	Software Design III: Abstract Data Types	4
CS 341	Software Design IV: Software Engineering	3
CS 370	Computer Architecture	3
CS 421	Programming Language Concepts	3
CS 441	Operating System Concepts	3
CS 442	Structures of Compilers	3
Electives ²		12
Total Credits		45

¹ May substitute MTH 225 for CS 225.² The following courses may be used as alternatives to computer science electives: CPE 105, CPE 212, CPE 309, CPE 321, CPE 406, CPE 419, CPE 420, CPE 446, CPE 463, CPE 466, CPE 478, CPE 499, PHY 335, MTH 317, MTH 371.

The 45 credits must include no less than 25 credits of 300/400 level courses.

In addition to the 45 credits, MTH 207 and MTH 208 must be taken.

Every student must complete the computer science major field test. This test is used for program assessment not individual assessment.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 440)
- Baccalaureate degree requirements (p. 441)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222,

PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence.

December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Two sample plans are provided below. The first is for students taking MTH 151 Precalculus in the first semester; the second is for students taking MTH 207 Calculus I in the first semester. Also, discuss the merits of adding a minor with your advisor, as you would likely be advised to spread courses for your minor throughout the plan.

Sample Plan 1 - students taking MTH 151 in first semester

Year 1			
Fall	Credits	Spring	Credits
MTH 151 (Gen Ed Math)	4	CS 220	4
CS 120 (Gen Ed Lang/Logical Systems)	4	CS 225	3

		Complete CS major field test ²	
	15		14
Total Credits: 120			

¹ See CSH BS Core Requirements (<http://catalog.uwlax.edu/undergraduate/scienceandhealth/#Core>) for information on completing the individualized option. 300/400 requirements for graduation may be impacted.

² Every student must complete the computer science major field test during their senior year. This test is used for program assessment, not individual assessment.

Computer Science Major - Computer Engineering Technology Emphasis - Bachelor of Science (BS)

Major requirements

(All colleges, excluding teacher certification programs)

Students must have completed the Associate in Applied Science degree requirements for electronic and computer engineering technology at Western Technical College (Western) with a GPA of 3.0 or above.

42 credits (51 credits including MTH requirements)

Code	Title	Credits
Select one of the following:		4
CS 120	Software Design I	
or both CS1-Java I (Western-152 153) & Java 2 (Western-152 155)		
CS 220	Software Design II	4
CS 225	Discrete Computational Structures ¹	3
CS 270	Introduction to Assembler Programming, C Programming and Computer Organization	3
CS 340	Software Design III: Abstract Data Types	4
CS 341	Software Design IV: Software Engineering	3
CS 370	Computer Architecture	3
CS 441	Operating System Concepts	3
Select two of the following:		6
CS 421	Programming Language Concepts	
CS 442	Structures of Compilers	
CS 455	Fundamentals of Information Security	
CS 471	Computer Networks	
Computer science electives ²		9
Total Credits		42

¹ may substitute MTH 225 for CS 225.

² The following courses may be used as alternatives to computer science electives: CPE 105, CPE 212, CPE 309, CPE 406, CPE 419, CPE 420, CPE 463, CPE 466, CPE 478, CPE 499, PHY 335, MTH 317, MTH 371.

The 42 credits must include no less than 25 credits of 300/400 level courses or CS 202 and no less than 22 credits of 300/400 level courses. The combination of Digital Electronic Concepts (Western-662 137), Electronic Devices (Western-662 125) and Embedded Systems (Western-662 134) may be completed at Western in place of CS 272.

In addition, MTH 207 and MTH 208 must be taken.

Students completing this program are not subject to the College of Science and Health requirement for an academic minor or 18 credits of course work at the 300/400 level in courses outside the major.

Every student must complete the computer science major field test. This test is used for program assessment not individual assessment.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 443)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA. ^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA ^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intercession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Students in the **Computer Science Major - Computer Engineering Technology Emphasis** begin at Western Technical College and transfer up to 60 credits prior to enrolling at UW-La Crosse. Below is a sample degree plan of the remaining 70 credits to be taken at UWL. This can

be used as a guide to identify the courses required to complete the major and other requirements needed for degree completion. The actual degree plan may differ depending on the course of study selected (second major, minor, etc.). This sample plan also assumes readiness for each course and/or major plan. Some courses may not be offered every term. Review course descriptions or the class timetable for course offering information.

Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the assistant to the dean of their college for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

Note: at least 40 credits of the 120 credits required must be earned at the 300/400 level.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student plan their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

17		3		15	

Total Credits: 130

¹ Every student must complete the computer science major field test during their senior year. This test is used for program assessment, not individual assessment.

Computer Science Major: Cybersecurity Emphasis - Bachelor of Science (BS)

The **cybersecurity emphasis** adds to the computer science degree the study of how to craft software systems that remain robust in the presence of intelligent attackers. Students learn cutting-edge techniques to identify and exploit vulnerabilities in software, and then they learn how to remove these vulnerabilities, leaving the software more resilient. This emphasis helps form the knowledge necessary to attack software but more importantly to craft the next generation of software with the level of trustworthiness required by modern society. Potential work after graduation includes opportunities in industry, academia, and government service in fields such as programming, security engineering, penetration testing, and software quality assurance.

Major requirements

(All colleges, excluding teacher certification programs)

45 credits (54 total credits including MTH requirements)

Code	Title	Credits

Electives		
Select six credits of CS electives. At least three credits must be at the 300/400-level. ²		6
Total Credits		45

¹ May substitute MTH 225 for CS 225.

² The following courses may be used as alternatives to computer science electives: CPE 105, CPE 212, CPE 309, CPE 321, CPE 406, CPE 419, CPE 420, CPE 446, CPE 463, CPE 466, CPE 478, CPE 499, PHY 335, MTH 317, MTH 371.

The 45 credits must include no less than 25 credits of 300/400 level courses.

In addition to the 45 credits, MTH 207 and MTH 208 must be taken.

Every student must complete the computer science major field test. This test is used for program assessment not individual assessment.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 445)
- Baccalaureate degree requirements (p. 445)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student’s actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean’s office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student’s program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Computer Science Major: Embedded Systems Emphasis - Bachelor of Science

Overview

In addition to learning the computer science fundamentals in software, hardware and theory, the **embedded systems emphasis** focuses on designing and implementing devices using embedded controllers. A person with this degree will know how to integrate microcontrollers, sensors and related devices; understand and utilize inter-device communications and bus standards; and design and implement

software applications consisting of microcontroller code that connects to cloud applications.

The emphasis includes the three course sequence:

- CS 272 Digital Circuit Design for Microcontrollers I
- CS 372 Hardware/Software Integration
- CS 472 Internet of Things

Major requirements

(All colleges, excluding teacher certification programs)

45 credits (54 total credits including MTH requirements)

Code	Title	Credits
Core		
CS 120	Software Design I	4
CS 220	Software Design II	4
CS 225	Discrete Computational Structures ¹	3
CS 270	Introduction to Assembler Programming, C Programming and Computer Organization	3
CS 272	Digital Circuit Design for Microcontrollers I	3
CS 340	Software Design III: Abstract Data Types	4
CS 370	Computer Architecture	3
CS 372	Hardware/Software Integration	3
CS 421	Programming Language Concepts	3
CS 441	Operating System Concepts	3
CS 442	Structures of Compilers	3
CS 472	Internet of Things	3
Electives		
Select six credits of CS electives. At least three of the credits must be at the 300/400 level ²		6
Total Credits		45

¹ may substitute MTH 225 for CS 225.

² The following courses may be used as alternatives to computer science electives: CPE 105, CPE 212, CPE 309, CPE 406, CPE 419, CPE 420, CPE 463, CPE 466, CPE 478, CPE 499, PHY 335, MTH 317, MTH 371.

The 45 credits must include no less than 25 credits of 300/400 level courses.

In addition to the 45 credits, MTH 207 and MTH 208 must be taken.

Every student must complete the computer science major field test. This test is used for program assessment not individual assessment.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 448)
- Baccalaureate degree requirements (p. 448)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.

6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

University 300/400-level Elective		3 CSH Core or Minor ¹	3
		Gen Ed Self & Society	3
		15	15
Total Credits: 120			

¹ See CSH BS Core Requirements (<http://catalog.uwlax.edu/undergraduate/scienceandhealth/#Core>) for information on completing the individualized option. 300/400 requirements for graduation may be impacted.

² Every student must complete the computer science major field test during their senior year. This test is used for program assessment, not individual assessment.

Dual Degree Program in Computer Science and Engineering

Major requirements

Students with a computer science major who also are interested in engineering are able to receive both a Bachelor of Science degree (computer science major) from UW-La Crosse and a Bachelor of Science degree (engineering major) from UW-Madison. At UW-La Crosse, students must complete a minimum of 86 credits, including the general education requirements and specific math and science courses in preparation for the engineering program. Students are recommended to include the following courses in their work at UW-La Crosse:

Code	Title	Credits
CHM 103	General Chemistry I	5
CS 120	Software Design I	4
CS 220	Software Design II	4
CS 224	Introduction to Programming Language	1-3
CS 225	Discrete Computational Structures ¹	3
CS 270	Introduction to Assembler Programming, C Programming and Computer Organization	3
CS 340	Software Design III: Abstract Data Types	4
CS 341	Software Design IV: Software Engineering	3
CS 370	Computer Architecture	3
CS 421	Programming Language Concepts	3
CS 441	Operating System Concepts	3
CS 442	Structures of Compilers	3
ECO 110	Microeconomics and Public Policy	3
ECO 120	Global Macroeconomics	3
ECO 336	Women in the U.S. Economy	3
MTH 207	Calculus I	5
MTH 208	Calculus II	4
MTH 309	Linear Algebra	4
MTH 371	Numerical Methods	3
PHY 203	General Physics I	4
PHY 204	General Physics II	4
PHY 306	Modern Physics	3
STAT 245	Probability and Statistics	4

¹ may substitute MTH 225 for CS 225.

Students should consult with the computer science department chair for specific course and sequence advising for this agreement.

Students who express interest in the dual degree program will be selected for entrance into the UW-Madison portion of the program based on their GPA in all course work; their GPA in the chemistry, computer science, mathematics, and physics course work required by the program; and the positive recommendation of the UW-La Crosse

computer science department chair (or designee). The dual degree engineering agreement with UW-Madison has additional requirements for eligibility, including Wisconsin resident status and that students must have enrolled in UW-La Crosse from high school (rather than transferring to UWL). Admission to UW-Madison is not guaranteed.

In order to receive the B.S. degree from UW-La Crosse, students must also complete credits (to total a minimum of 120 credits) in engineering at UW-Madison and transfer these credits to UW-La Crosse. For the typical student, the remaining credits must include at least eight credits at the 300 level or above. This transfer of credits and awarding of the B.S. degree by UWL can take place as soon as the student earns the necessary credits.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 450)
- Baccalaureate degree requirements (p. 451)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.

- c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Year 1			
Fall	Credits	Spring	Credits
CS 120 (Gen Ed Lang/Logical Systems)		4 CS 220	4
MTH 207 (Gen Ed Math)		5 CS 225	3

¹ Every student must complete the computer science major field test during their final year on campus. This test is used for program assessment, not individual assessment.

Dual Degree Program in Computer Science and Master of Software Engineering

The dual degree program in Computer Science and Master of Software Engineering is a great opportunity to those highly motivated students who would like to further their knowledge in software engineering. This program enables students to complete both degrees, a Bachelor of Science (BS) in Computer Science and a Master of Software Engineering (MSE) from UW-La Crosse, with less time in school, less tuition, and enter the workforce earlier than those receiving traditional degrees. This program can be completed in five years compared to what typically would take six years when completing both degrees separately.

Students may be accepted into the dual degree program anytime before they have completed seventy-five undergraduate credits hours. Applicants for undergraduate admission to UWL may request admission into the dual degree program. In order to remain in the program students must maintain a 3.00 GPA. Award of the BS degree will occur upon completion of 120 credits, the CS major requirements, the CSH college requirements, and the general university requirements. Students must have graduate student status prior to registering for their fourth graduate course (normally in the second semester of their 4th year.) Award of the MSE degree will occur after the completion of the BS and MSE requirements.

Refer to the sample degree plan (p. 453) for course sequencing. Students should consult with the Department Chair or their CS faculty advisor for specific course advising for this agreement.

Major requirements

The Dual Degree Program in Computer Science and Master of Software Engineering enables a UWL student to earn both a Bachelor of Science (B.S.) degree with a computer science major and a Master of Software Engineering (MSE) degree in five years. Students in this dual degree program should complete the following by the end of their junior year.

Code	Title	Credits
Core		
CS 120	Software Design I	4
CS 220	Software Design II	4
CS 225	Discrete Computational Structures ¹	3
CS 270	Introduction to Assembler Programming, C Programming and Computer Organization	3
CS 340	Software Design III: Abstract Data Types	4
CS 370	Computer Architecture	3
CS 421	Programming Language Concepts	3
CS 441	Operating System Concepts	3
CS 442	Structures of Compilers	3
MTH 207	Calculus I	5
MTH 208	Calculus II	4
Electives		
Select nine credits of CS electives. At least three of the credits must be at the 300/400 level. ^{2,3}		9

¹ May substitute MTH 225 for CS 225.

² Excluding CS 341.

³ CPE courses may be used as alternatives to computer science electives, excluding CPE 321, CPE 395, CPE 446, CPE 481, CPE 483, and CPE 498.

During the senior year, students should complete:

Code	Title	Credits
CS 555	Fundamentals of Information Security	3
CS 741	Software Engineering Principles	3
CS 743	Software Verification and Validation	3
CS 746	Software Modeling and Analysis	3
Select three or six graduate level MSE electives		3-6

In the fifth year, students should complete:

Code	Title	Credits
CS 744	Software Project Management	3
Graduate level MSE electives		3-6
CS 798	Software Development Project (two semesters of six credits)	12

CS 555 and CS 741 will count toward the 45 credit hours of computer science courses required for the B.S. degree. CS 746, CS 743, CS 744, 12 credits of CS 798 (capstone project), and nine credits of MSE electives will fulfill the MSE requirements.

Students may be accepted into the dual degree program anytime before they have completed 75 undergraduate credit hours. Applicants for undergraduate admission to UWL may request admission into the dual degree program. In order to remain in the program students must maintain a 3.00 GPA. Award of the B.S. degree will occur upon completion of 120 credits, the CS major requirements, the CSH college core requirements, and the general university requirements. Students must have graduate student status before registering for their fourth graduate course (normally in the second semester of their senior year). Award of the MSE degree will occur after the completion of the B.S. and MSE requirements.

Every student must complete the computer science major field test. This test is used for program assessment not individual assessment.

Contact the Department of Computer Science (<http://www.cs.uwlax.edu/>) for application information. See the online graduate catalog for more information about the MSE program (<http://catalog.uwlax.edu/graduate/programrequirements/softwareengineering/>).

Courses offered at both the undergraduate and graduate levels can only be taken for credit at one level.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 453)
- Baccalaureate degree requirements (p. 453)

- Master of Software Engineering requirements (<http://catalog.uwlax.edu/graduate/programrequirements/softwareengineering/mse/>)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}

5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete,

to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Total Credits: 150

- See CSH BS Core Requirements (<http://catalog.uwlax.edu/undergraduate/scienceandhealth/#Core>) for information on completing the individualized option. 300/400 requirements for graduation may be impacted.
- Every student must complete the computer science major field test during their senior year. This test is used for program assessment, not individual assessment.
- CS 364 should be one of your "CS Elective" courses taken prior to taking CS 741. It is offered in both Fall and Spring semesters.

Students also have the option of taking Gen Ed courses during Winter Intersession (January between Fall and Spring semesters) and Summer to reduce the load during regular semesters (Fall and Spring).

Additional UWL and College of Science and Health core courses may be required.

Dual Degree Program in Computer Science: Cybersecurity and Master of Software Engineering

The dual degree program in Computer Science: Cybersecurity Emphasis and Master of Software Engineering is a great opportunity to those highly motivated students who would like to further their knowledge in software engineering. This program enables students to complete both degrees, a Bachelor of Science (BS) in computer science and a Master of Software Engineering (MSE) from UW-La Crosse, with less time in school, less tuition, and enter the workforce earlier than those receiving traditional degrees. This program can be completed in five years compared to what typically would take six years when completing both degrees separately.

Students may be accepted into the dual degree program anytime before they have completed seventy-five undergraduate credits hours. Applicants for undergraduate admission to UWL may request admission into the dual degree program. In order to remain in the program students must maintain a 3.00 GPA. Award of the BS degree will occur upon completion of 120 credits, the CS major requirements, the CSH college requirements, and the general university requirements. Students must have graduate student status prior to registering for their fourth graduate course (normally in the second semester of their 4th year.) Award of the MSE degree will occur after the completion of the BS and MSE requirements.

Refer to the sample degree plan (p. 456) for course sequencing. Students should consult with the CS Department Chair or their CS faculty advisor for specific course advising for this agreement.

Major requirements

The Dual Degree Program in Computer Science: Cybersecurity Emphasis and Master of Software Engineering enables a UWL student to earn both a Bachelor of Science (B.S.) degree with a computer science major and a Master of Software Engineering (MSE) degree in five years. Students in this dual degree program should complete the following by the end of their junior year.

Code	Title	Credits
Core		
CS 120	Software Design I	4
CS 220	Software Design II	4
CS 225	Discrete Computational Structures ¹	3
CS 270	Introduction to Assembler Programming, C Programming and Computer Organization	3
CS 340	Software Design III: Abstract Data Types	4
CS 356	Software Exploitation	3
CS 370	Computer Architecture	3
CS 421	Programming Language Concepts	3
CS 441	Operating System Concepts	3
CS 442	Structures of Compilers	3
MTH 207	Calculus I	5
MTH 208	Calculus II	4
Electives		
Select three credits of CS electives. ^{2, 3}		3

¹ May substitute MTH 225 for CS 225.

² Excluding CS 341.

³ CPE courses may be used as alternatives to computer science electives, excluding CPE 321, CPE 395, CPE 446, CPE 481, CPE 483, and CPE 498.

During the senior year, students should complete:

Code	Title	Credits
CS 555	Fundamentals of Information Security	3
CS 556	Secure Software Development	3
CS 741	Software Engineering Principles	3
CS 743	Software Verification and Validation	3
CS 746	Software Modeling and Analysis	3
Select three or six graduate level MSE electives		3-6

In the fifth year, students should complete:

Code	Title	Credits
CS 744	Software Project Management	3
Graduate level MSE electives		3-6
CS 798	Software Development Project (two semesters of six credits)	12

CS 555, CS 556, and CS 741 will count toward the 45 credit hours of computer science courses required for the B.S. degree. CS 746, CS 743, CS 744, 12 credits of CS 798 (capstone project), and nine credits of MSE electives will fulfill the MSE requirements.

Students may be accepted into the dual degree program anytime before they have completed 75 undergraduate credit hours. Applicants for undergraduate admission to UWL may request admission into the dual degree program. In order to remain in the program students must maintain a 3.00 GPA. Award of the B.S. degree will occur upon completion of 120 credits, the CS major requirements, the CSH college core requirements, and the general university requirements. Students must have graduate student status before registering for their fourth graduate course (normally in the second semester of their senior year). Award of the MSE degree will occur after the completion of the B.S. and MSE requirements.

Every student must complete the computer science major field test. This test is used for program assessment not individual assessment.

Contact the Department of Computer Science (<http://www.cs.uwlax.edu/>) for application information. See the online graduate catalog for more information about the MSE program (<http://catalog.uwlax.edu/graduate/programrequirements/softwareengineering/>).

Courses offered at both the undergraduate and graduate levels can only be taken for credit at one level.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 455)
- Baccalaureate degree requirements (p. 456)
- Master of Software Engineering requirements (<http://catalog.uwlax.edu/graduate/programrequirements/softwareengineering/mse/>)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs ¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or

ii. 300/400 level courses inside major not being used to fulfill major requirements.

c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=logins&languageCd=ENG&>) and work closely with

their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Year 1			
Fall	Credits	Spring	Credits
CS 120 (Gen Ed Lang/Logical Systems)		4 CS 220	4
MTH 207 (Gen Ed Math)		5 CS 225	3
ENG 110 or 112 (Gen Ed Literacy-Written)		3 MTH 208 (Gen Ed Math)	4

	9		9	

Total Credits: 150

¹ See CSH BS Core Requirements (<http://catalog.uwlax.edu/undergraduate/scienceandhealth/#Core>) for information on completing the individualized option. 300/400 requirements for graduation may be impacted.

² Every student must complete the computer science major field test during their senior year. This test is used for program assessment, not individual assessment.

Students also have the option of taking Gen Ed courses during Winter Intercession (January between Fall and Spring semesters) and Summer to reduce the load during regular semesters (Fall and Spring).

Additional UWL and College of Science and Health core courses may be required.

Dual Degree Program in Computer Science: Embedded Systems and Master of Software Engineering

The dual degree program in Computer Science: Embedded Systems Emphasis and Master of Software Engineering is a great opportunity to those highly motivated students who would like to further their knowledge in software engineering. This program enables students to complete both degrees, a Bachelor of Science (BS) in computer science and a Master of Software Engineering (MSE) from UW-La Crosse, with less time in school, less tuition, and enter the workforce earlier than those receiving traditional degrees. This program can be completed in five years compared to what typically would take six years when completing both degrees separately.

Students may be accepted into the dual degree program anytime before they have completed seventy-five undergraduate credits hours. Applicants for undergraduate admission to UWL may request admission into the dual degree program. In order to remain in the program students must maintain a 3.00 GPA. Award of the BS degree will occur upon completion of 120 credits, the CS major requirements, the CSH college requirements, and the general university requirements. Students

must have graduate student status prior to registering for their fourth graduate course (normally in the second semester of their 4th year.) Award of the MSE degree will occur after the completion of the BS and MSE requirements.

Refer to the sample degree plan (p. 458) for course sequencing. Students should consult with the CS Department Chair or their CS faculty advisor for specific course advising for this agreement.

Major requirements

The Dual Degree Program in Computer Science: Embedded Systems Emphasis and Master of Software Engineering enables a UWL student to earn both a Bachelor of Science (B.S.) degree with a computer science major and a Master of Software Engineering (MSE) degree in five years. Students in this dual degree program should complete the following by the end of their junior year:

Code	Title	Credits
Core		
CS 120	Software Design I	4
CS 220	Software Design II	4
CS 225	Discrete Computational Structures ¹	3
CS 270	Introduction to Assembler Programming, C Programming and Computer Organization	3
CS 272	Digital Circuit Design for Microcontrollers I	3
CS 340	Software Design III: Abstract Data Types	4
CS 370	Computer Architecture	3
CS 372	Hardware/Software Integration	3
CS 421	Programming Language Concepts	3
CS 441	Operating System Concepts	3
CS 442	Structures of Compilers	3
CS 472	Internet of Things	3
MTH 207	Calculus I	5
MTH 208	Calculus II	4

¹ May substitute MTH 225 for CS 225.

During the senior year, students should complete:

Code	Title	Credits
CS 555	Fundamentals of Information Security	3
CS 741	Software Engineering Principles	3
CS 743	Software Verification and Validation	3
CS 746	Software Modeling and Analysis	3
	Select three or six graduate level MSE electives	3-6

In the fifth year, students should complete:

Code	Title	Credits
CS 744	Software Project Management	3
	Graduate level MSE electives	3-6
CS 798	Software Development Project (two semesters of six credits)	12

CS 555 and CS 741 will count toward the 45 credit hours of computer science courses required for the B.S. degree. CS 746, CS 743, CS 744, 12 credits of CS 798 (capstone project), and nine credits of MSE electives will fulfill the MSE requirements.

Students may be accepted into the dual degree program anytime before they have completed 75 undergraduate credit hours. Applicants

for undergraduate admission to UWL may request admission into the dual degree program. In order to remain in the program students must maintain a 3.00 GPA. Award of the B.S. degree will occur upon completion of 120 credits, the CS major requirements, the CSH college core requirements, and the general university requirements. Students must have graduate student status before registering for their fourth graduate course (normally in the second semester of their senior year). Award of the MSE degree will occur after the completion of the B.S. and MSE requirements.

Every student must complete the computer science major field test. This test is used for program assessment not individual assessment.

Contact the Department of Computer Science (<http://www.cs.uwlax.edu/>) for application information. See the online graduate catalog for more information about the MSE program (<http://catalog.uwlax.edu/graduate/programrequirements/softwareengineering/>).

Courses offered at both the undergraduate and graduate levels can only be taken for credit at one level.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 458)
- Baccalaureate degree requirements (p. 458)
- Master of Software Engineering requirements (<http://catalog.uwlax.edu/graduate/programrequirements/softwareengineering/mse/>)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits

- a. At least 12 credits must be earned at the 300/400 level outside the major department.
- b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
- c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan,

and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Exercise and Sport Science Department (ESS)

College of Science and Health
Department Chair: Chia-Chen Yu
124 Mitchell Hall; 608.785.6549
Email: cyu@uwlax.edu

www.uwlax.edu/exercise-sport-science (<http://www.uwlax.edu/Exercise-Sport-Science/>)

With a reputation as one of the outstanding programs in the country, the UW-La Crosse Department of Exercise and Sport Science has a history of preparing quality professionals who are employed in all areas of the USA and around the world. With three areas of emphasis from which to choose, our graduates are well prepared to meet the challenges of a wide variety of careers.

Whether your interest is in teaching, coaching, fitness, or management, the Department of Exercise and Sport Science is committed to helping each student achieve his or her maximum potential. Each student is assigned a faculty adviser to assist with academic and career decisions. Our highly acclaimed "learn by doing" reputation is further enhanced by providing students with hands-on educational experiences in their area of choice. While maintaining a strong tradition in activities and the sciences, the department also emphasizes innovative programs and activities designed to maintain healthy, active life styles.

Center of Excellence in Physical Education

The Center of Excellence designation was awarded to the Department of Exercise and Sport Science by the Board of Regents of the University of Wisconsin System. The purpose of the center, which reflects the excellent reputation of the department, is to serve as a catalyst for maintaining faculty and curricular vitality while expanding the scope of comprehensive services provided to professionals in Wisconsin and throughout the nation. General goals are to provide in-service and expertise in emerging content areas and technology to physical educators and students in professional preparation programs; modify undergraduate and master's curricula to incorporate recent trends and projected professional needs and expand research and public service components with special emphasis on assessment.

A three-dimensional professional preparation model was developed with the following foci:

1. Enhancing life span motor development;
2. Promoting the major purposes of professional preparation in physical education-prevention of injury or illness, skill enhancement, meaningful active living, and rehabilitation; and
3. Developing instruments for assessment of performance and programs.

Additional emphasis is placed on the importance of movement of young children and on age-related changes in active, older adults to develop and maintain efficient movement throughout the lifespan. The professional preparation programs within the Department of Exercise

and Sport Science prepare graduates to assist individuals of all ages in developing meaningful, active lifestyles. Improving the level of skill in a wide variety of activities and promoting effective movement patterns will result in more active and healthy individuals in our society. For additional information regarding the Center of Excellence in Physical Education, please contact: Department Chair, Exercise and Sport Science, Mitchell Hall, University of Wisconsin-La Crosse, La Crosse, WI 54601 USA

Admission to programs

All majors in the Department of Exercise and Sport Science have admission standards and retention and advancement standards. Students are advised to become aware of the application criteria for their major and may refer to program websites for the most detailed information regarding these criteria and procedures. Meeting minimum criteria does not guarantee admission, as the department programs have competitive admission processes.

Exercise and sport science change of major policy

Students must have a cumulative UWL GPA of 2.50 or higher to declare the exercise and sport science major. This includes all emphases.

General education writing emphasis

This department incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete a major in this department will fulfill the general education writing emphasis requirement (p. 66).

2022-23 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

Exercise and Sport Science Major: Exercise Science Fitness Track - Bachelor of Science (BS)

Major requirements

(College of Science and Health)

Admission to program

Admission to the ESS-exercise science emphasis is competitive and not all who apply may be accommodated.

1. To be considered for admission to the exercise and sport science major: exercise science emphasis, the student must have completed at least 30 semester credits, including general education credits and two pre-admission courses (BIO 100 or BIO 105 or MIC 100; HPR 105) with a grade of at least "C" in each of these courses and a cumulative GPA of at least 2.75.
2. Applications for admission are accepted in the fall semester (deadline of October 1) and the spring semester (deadline of February 1). All candidates must meet academic requirements, physical fitness standards and professional and personal qualifications and be approved by the Exercise Science Advisory Committee. Consideration for selection is based on the following criteria:
 - a. Cumulative UWL GPA of 2.75 or higher;
 - b. Grade of "C" or better in BIO 100 or BIO 105 or MIC 100;
 - c. Grade of "C" or better in HPR 105;
 - d. Fitness evaluation;
 - e. Two professional job shadows (pre-approved by the student's ESS Academic Advisor);
 - f. Extra-curricular experiences related to the emphasis; and
 - g. Narrative statement content and technical writing quality.

Retention and advancement

1. Once admitted, a 2.75 GPA (cumulative and major) must be maintained and a "C" grade or better must be earned in all required and elective major courses for retention in the program. Students whose GPA falls below 2.75 will be placed on probation for one semester. Failure to achieve a 2.75 GPA (cumulative and major) by the end of the probation semester will result in ineligibility to continue in the program.
2. To be admitted to ESS 450 Exercise and Sport Science Internship, students must achieve a 2.75 cumulative and major GPA and have successfully completed all program course work.

For complete details regarding application procedures, contact the Exercise Science Program Director in the Department of Exercise and Sport Science.

Curriculum

73 credits

Core courses:

(required for all ESS-exercise science emphasis students)

Code	Title	Credits
ESS 100	Physical Activities (6 credits, may include ESS 116)	6
ESS 201	Safety, First Aid and CPR	1
ESS 207	Human Motor Behavior	3
ESS 281	Prevention and Care of Athletic Injuries	2
ESS 302	Physiology of Exercise	3
ESS 303	Biomechanics	3

ESS 449	Seminar in Fitness/Sports Management	1
ESS 450	Exercise and Sport Science Internship	12
CST 260	Professional Communication	3
or ENG 307	Writing for Management, Public Relations and the Professions	
MKT 309	Principles of Marketing	3
Total Credits		43

General education requirements

Students who select the exercise and sport science: exercise science fitness track major are required to take HPR 105; BIO 100 or BIO 105 or MIC 100 (BIO 100 recommended). Additional general education courses must also be selected to complete all category requirements and to meet the university minimum requirement of 42 total credit hours in general education.

Degree requirements

All students must complete the general education, college core (waived for exercise and sport science: exercise science fitness track majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer

to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 462)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

- ¹ BIO 100 or MIC 100 recommended.
- ² Students may earn credit by examination for ESS 201. Interested students should check with the ESS department and the CSH Dean's Office to make arrangements for taking the test.
- ³ BIO 312 and BIO 313 may be used as substitutes for ESS 205 and ESS 206.

Exercise and Sport Science Major: Exercise Science Pre-Professional Track - Bachelor of Science

Major requirements

(College of Science and Health)

Admission to program

Admission to the ESS-exercise science pre-professional track is competitive and not all who apply may be accommodated.

- To be considered for admission to the exercise and sport science major: exercise science pre-professional track, the student must have completed at least 30 semester credits, including general education credits and two pre-admission courses (BIO 105 or MIC 100 and HPR 105) with a grade of at least "C" in each of these courses and a cumulative GPA of at least 3.00.
- Applications for admission are accepted in the fall semester (deadline of October 1) and the spring semester (deadline of February 1). All candidates must meet academic requirements, physical fitness standards and professional and personal qualifications and be approved by the Exercise Science Advisory Committee. Consideration for selection is based on the following criteria:
 - A cumulative UWL GPA of 3.00 or higher;
 - Grade of "C" or better in BIO 105 or MIC 100;
 - Grade of "C" or better in HPR 105;
 - Fitness evaluation;
 - Two professional job shadows (pre-approved by the student's ESS Academic Advisor);
 - Extra-curricular experiences related to the emphasis; and
 - Narrative statement content and technical writing quality.

Retention and advancement

Once admitted, a 3.00 GPA (cumulative and major) must be maintained and a "C" grade or better must be earned in all required and elective

major courses for retention in the program. Students whose GPA falls below 3.00 will be placed on probation for one semester. Failure to achieve a 3.00 GPA (cumulative and major) by the end of the probation semester will result in ineligibility to continue in the program.

For complete details regarding application procedures, contact the Exercise Science Program Director in the Department of Exercise and Sport Science.

Curriculum

(60-63 credits for the pre-professional track)

Pre-professional track courses:

Core courses:

(required for all ESS-exercise science emphasis students)

Code	Title	Credits
ESS 100	Physical Activities (6 credits, may include ESS 116)	6
ESS 201	Safety, First Aid and CPR	1
ESS 207	Human Motor Behavior	3
ESS 281	Prevention and Care of Athletic Injuries	2
ESS 302	Physiology of Exercise	3
ESS 303	Biomechanics	3
ESS 323	Nutrition and Sport	3
ESS 328	Field Experience in Exercise Science	3
ESS 368	Strength Training Techniques and Programs	3
ESS 446	Current Research and Trends in Exercise Science	3
Total Credits		30

Code	Title	Credits
Required courses (12-14 credits)		
ESS 383	Clinical Pathology for Exercise Science	3
BIO 312	Human Anatomy and Physiology I	4
BIO 313	Human Anatomy and Physiology II	4
CHE 220	Medical Terminology for Health Education	1-3
or RTH 355	Medical Language	
CSH college curriculum (12-13 credits)		
CHM 104	General Chemistry II	5
PHY 104	Fundamental Physics II	4
Select a BIO or MIC course ¹		3-4
Psychology (3 credits)		
Select one of the following:		3
PSY 100	General Psychology	
PSY 212	Lifespan Development	
Any 3 credits of PSY course work transferred from another institution		
Select any 3 credit sociology course		3
Total Credits		30-33

¹ Not including BIO 105, BIO 312, or BIO 313

Students must complete at least 40 credits in the 300/400 level range.

General education requirements

Students who select the exercise and sport science-exercise science pre-professional track major are required to take HPR 105,

BIO 105, CHM 103, STAT 145, a second math course at the 150 level or higher or CS 101 or CS 120; and PHY 103. Additional general education courses must also be selected to complete all category requirements and to meet the university minimum requirement of 42 total credit hours in general education.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 464)
- Baccalaureate degree requirements (p. 465)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses

may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

12		12

Total Credits: 120

¹ Students may earn credit by examination for ESS 201. Interested students should check with the ESS department and the CSH Dean's Office to make arrangements for taking the test.

² Excluding BIO 105, BIO 312, and BIO 313.

³ Many pre-health graduate programs require an additional life science with a lab course beyond BIO 105, BIO 312, and BIO 313. It is recommended that students research the prerequisites for admission to the pre-health programs of interest to them. Regardless, any BIO/MIC course (three credits minimum) satisfies this requirement.

⁴ PSY 100 is recommended and satisfies the Gen Ed Self & Society requirement. Any three credit PSY course satisfies the PSY requirement in the ESS-exercise science pre-professional major.

⁵ The most efficient way to satisfy the CSH college core upper level course requirement is to choose the individualized program option. With that option, BIO 312, BIO 313, and RTH 355 apply, along with 1 additional credit of 300/400-level coursework from any department. Students who select CHE 220 instead of RTH 355 need 4 additional credits of 300/400-level coursework. See CSH BS Core Requirements (<http://catalog.uwlax.edu/undergraduate/scienceandhealth/#Core>) for information on completing the individualized option. 300/400 requirements for graduation may be impacted.

ESS Major: Physical, Adapted, and School Health Education (Grades K-12) - Bachelor of Science (BS)

Program requirements

Completion of the Physical, Adapted, and School Health Education (PASHE) Program and associated benchmark assessments (<http://catalog.uwlax.edu/undergraduate/education/#SOE-program-requirements>) will lead to endorsement for the following Wisconsin teaching licenses:

- Physical Education, grades K-12 (1530),
- Adapted Physical Education, grades K-12 (1860), and
- Health, grades K-12 (1910).

Students in all teacher education programs must satisfy the School of Education (SOE) core requirements (p. 597).

Students in all teacher education programs must be admitted to the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) in order to complete their program requirements and be eligible for endorsement for the appropriate teaching license(s). Students majoring in physical, adapted, and school health education (PASHE, grades K-12) must meet specific program admission criteria (p. 596).

Retention and advancement

Teacher candidates may be retained in their teacher education program provided they fulfill the conditions described in the SOE retention policy (<http://catalog.uwlax.edu/undergraduate/education/#retention>). Students must complete all course requirements and other benchmarks prior to student teaching as described in the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>). Additional SOE program requirements, including the culminating assessment of pedagogical knowledge, are described on the SOE catalog page (<http://catalog.uwlax.edu/undergraduate/education/>).

First aid certification

Physical, adapted, and school health education majors must possess an American Red Cross First Aid or equivalent agency certification prior to student teaching.

Curriculum

Required general education courses (9 credits)

⁴ Also satisfies an SOE core requirement.

⁵ Must be completed with a grade of "C" or better in order to apply for admission to the PASHE Program.

⁶ Must be completed with a grade of "C" or better or be concurrently enrolled in order to apply for admission to the PASHE Program.

⁷ Must complete all course requirements and other benchmarks prior to student teaching, including possessing an American Red Cross First Aid or equivalent agency certification. For more information, please see the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>).

Additional teacher education requirements are listed on the School of Education (p. 591) catalog page.

Degree requirements

All teacher education students must complete the general education, School of Education, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the

Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- School of Education requirements (p. 591)
- Baccalaureate degree requirements (p. 467)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with

their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

- See the PASHE admission policy (p. 596) on the SOE catalog page for more details.
- See the SOE admissions website (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) for complete admission and application details. Students majoring in physical, adapted, and school health education (PASHE, grades K-12) must meet specific program admission criteria (p. 596). Students will be required to complete a criminal background check (p. 597) at the time of application for admission.
- Students applying for field and student teaching placements will be asked to disclose any criminal charges (p. 600).
- Students must apply for student teaching (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/for-teacher-candidates/>) through the Office of Field Experience one year prior to the student teaching semester.
- For more information, please see the Student Teaching and Internship Policy (p. 600).

Exercise and Sport Science Major: Sport Management Emphasis - Bachelor of Science (BS)

Major requirements

(College of Science and Health)

Admission to program

Admission to the sport management emphasis is competitive and not all who apply may be accommodated. From those applying each year, approximately 30 will be admitted into the sport management emphasis. To be considered for admission to the exercise and sport science major: sport management emphasis, the student must have:

- Completed or be "in progress" of completing at least 30 semester credits, including general education credits and the two pre-

admission core courses (BIO 100 or BIO 105 or MIC 100; ESS 110) with a grade of at least "C" in each of these core courses.

2. A cumulative UWL GPA of 2.75 or higher.
3. Applications are due October 1 to be considered for admission to the program spring semester or February 1 to be considered for admission to the program for fall semester. All candidates must meet academic, professional involvement, and personal qualifications and be approved by the Sport Management Advisory Board. Consideration for selection is based on the following criteria:
 - a. Cumulative UWL GPA;
 - b. Professional involvement;
 - c. Professional site visitations/observations/work experiences;
 - d. Writing skills; and
 - e. Interview.

Retention and advancement

1. Once admitted, a 2.75 GPA (cumulative and major) must be maintained and a "C" grade or better must be earned in all required and elective major courses for retention in the program. Students whose GPA falls below 2.75 will be placed on program probation for one semester. Failure to achieve a 2.75 GPA (cumulative and major) by the end of the probation semester will result in ineligibility to continue in the program.
2. To be admitted to ESS 450 Exercise and Sport Science Internship, students must achieve a 2.75 cumulative and major GPA and have successfully completed all program course work.

For complete details regarding application procedures, contact the Sport Management Program Director in the Department of Exercise and Sport Science.

Curriculum

67 credits

Code	Title	Credits
Core courses

ESS 447	Administration in Fitness and Sport	3
ESS 448	Promotion and Development of Fitness and Sport Programs	3
ESS 449	Seminar in Fitness/Sports Management	1
ESS 450	Exercise and Sport Science Internship	12
ACC 221	Accounting Principles I	3
MGT 308	Organizational Behavior	3
MKT 309	Principles of Marketing	3

CST 260 or ENG 307	Professional Communication Writing for Management, Public Relations and the Professions	3
ECO 320 or MKT 370	Economics of Sports Professional Selling and Sales Management	3
Elective courses		
Select three credits of the following:		3
ESS 201	Safety, First Aid and CPR	
ESS 281	Prevention and Care of Athletic Injuries	
ESS 302	Physiology of Exercise	
ESS 303	Biomechanics	
ESS 323	Nutrition and Sport	
ESS 349	Psychology of Coaching Competitive Athletics	
ESS 368	Strength Training Techniques and Programs	
IS 220	Information Systems for Business Management	
FIN 355	Principles of Financial Management	
BLAW 205	The Legal and Ethical Environment of Business	
BLAW 305	Business Law	
MGT 385	Human Resource Management	
MKT 365	Integrated Marketing Communications	
MKT 444	Sports and Recreation Marketing	
REC 305	Operation and Management of Swimming Pools and Spas	

Total Credits 67

General education requirements

Exercise and sport science majors with sport management emphasis are required to take BIO 100 or BIO 105 or MIC 100, ECO 110 and HPR 105 to meet prerequisites for advanced courses and/or for admission to the emphasis. These courses will also fulfill general education requirements.

Degree requirements

All students must complete the general education, college core (waived for exercise and sport science: sport management emphasis majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 469)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}

5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA¹, ² in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete,

to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

Geography and Earth Science Department (GEO/ESC)

College of Science and Health
 Department Chair: Colin Belby
 2021 Cowley Hall; 608.785.8339
 Email: cbelby@uwlax.edu

www.uwlax.edu/geography-and-earth-science (<http://www.uwlax.edu/Geography-and-Earth-Science/>)

Geography is an integrative spatial science that investigates complex interactions between humans and the environment. Students in geography programs develop the analytical and communication skills needed to address pressing local to global-scale environmental and societal issues including land use change, natural resource management, climate change, natural hazards and disaster management, population growth and migration, and globalization. Geographers possess an understanding of spatial connectivity in the natural and built environment and recognize how past and present conditions on earth guide societal decisions that will influence future generations of people and their interaction with natural systems.

Faculty in the Department of Geography and Earth Science teach courses and conduct research in the discipline's four major subfields: physical geography, human geography, geographic information science (GIS), and environmental science. Experiential learning is valued by the Department of Geography and Earth Science faculty and is

incorporated throughout the curriculum. Students work hands-on with industry-standard GIS software and analytical equipment in modern classrooms and research laboratories in the Prairie Springs Science Center. Faculty incorporate cutting-edge field mapping technology and environmental sampling equipment during outdoor excursions in the bluffland, wetland, and riverine environments near campus. Course-embedded research, undergraduate research, and study abroad experiences further enhance student understanding of earth surface processes, environmental change, water resource management, and cultural diversity. Through partnerships with local employers, students frequently obtain internships in the field prior to graduation – providing them the opportunity to engage with professionals in the field and further refine their skillsets.

The topics studied by geographers are inherently interdisciplinary. The Department of Geography and Earth Science offers minors in geoarchaeology, GIS, and earth science, and many of its courses are elective options within biology, chemistry, environmental studies, and international and global studies.

For students with interests in the environment, mapping and geospatial technology, planning, or global politics and cultures, the Department of Geography and Earth Science would be a good fit. The U.S. Bureau of Labor Statistics expects a large growth in geography-related jobs in the next decade. UWL geography majors have been highly successful finding employment upon graduation, holding positions in environmental consulting, urban and regional planning, transportation planning, environmental monitoring and restoration, natural and cultural resource mapping, meteorology, and surveying.

General education writing emphasis

This department incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete a major in this department will fulfill the general education writing emphasis requirement (<http://catalog.uwlax.edu/undergraduate/generaleducation/#generaleducationrequirementstext>).

2022-23 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

Professor

Colin Belby, Ph.D., Department Chair

Cynthia Berlin, Ph.D.

Joan Bunbury, Ph.D.

Gargi Chaudhuri, Ph.D.

Associate Professor

John Kelly, Ph.D.

Niti Mishra, Ph.D.

Daniel Sambu, Ph.D.

Associate Teaching Professor

Jeffrey Kueny

Assistant Teaching Professor

Brian Pompeii, Ph.D.

GIS Lab Manager

Steven Fulton

Administrative Support

Anita Willis-Frels

GEO 340	Earth's Polar Regions	
GEO 427	Sustainable Water Resource Management	

Select three credits at the 300/400-level from a category above OR three credits from the following:		3
GEO 102	Maps and Society ¹	
GEO 450	Internship in Geography and Earth Science ²	
GEO 470	Special Topics in Geography/Earth Science ³	
GEO 490	Independent Study ⁴	
GEO 495	Seminar in Geography/Earth Science ⁵	
GEO 499	Undergraduate Research ⁶	

Total Credits **43**

¹ No more than two courses from GEO 102, GEO 202, and GEO 211 can be applied to the major.

² A maximum of three credits of GEO 450 may apply to the major.

³ A maximum of three credits of GEO 470 may apply to the major.

⁴ A maximum of three credits of GEO 490 may apply to the major.

⁵ A maximum of three credits of GEO 495 may apply to the major.

⁶ A maximum of three credits of GEO 499 may apply to the major.

Required general education courses:

Code	Title	Credits
STAT 145	Elementary Statistics	4
Complete one of the following:		4-5
BIO 100	Biology for the Informed Citizen	
BIO 105	General Biology	
CHM 103	General Chemistry I	
Total Credits		8-9

Exit survey requirement

During the student's last semester of enrollment, completion of the Department of Geography and Earth Science exit survey is required in order to graduate.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 473)
- Baccalaureate degree requirements (p. 473)

College of Science and Health (CSH) Bachelor of Arts core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 210, BIO 304, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Arts degree, students must complete a major from the college and proficiency in a world language at the 202 level or an ESL proficiency score of 80 or above on the La Crosse Battery of exams for non-native speakers of English. Contact the "*English as a Second Language Institute*" for eligibility and regulations. Students must also complete one of the following options. It is recommended that courses are selected in consultation with your advisor.

1. Complete a minor in the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Arts; or
2. Complete an individualized option, consisting of 15 credits.
 - a. These courses must be from the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Art.
 - b. At least 9 credits must be earned at the 300/400 level.
 - c. General education courses may apply provided they are not being used to fulfill minimum general education requirements.

d. Internship credits may not count toward the individualized option.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Select three credits at the 300/400-level from a category above OR three credits from the following: 3

GEO 102	Maps and Society ¹
GEO 450	Internship in Geography and Earth Science ²
GEO 470	Special Topics in Geography/Earth Science ³
GEO 490	Independent Study ⁴
GEO 495	Seminar in Geography/Earth Science ⁵
GEO 499	Undergraduate Research ⁶

Total Credits 43¹ No more than two courses from GEO 102, GEO 202, and GEO 211 can be applied to the major.² A maximum of three credits of GEO 450 may apply to the major.³ A maximum of three credits of GEO 470 may apply to the major.⁴ A maximum of three credits of GEO 490 may apply to the major.⁵ A maximum of three credits of GEO 495 may apply to the major.⁶ A maximum of three credits of GEO 499 may apply to the major.**Required general education courses:**

Code	Title	Credits
STAT 145	Elementary Statistics	4
Complete one of the following:		4-5
BIO 100	Biology for the Informed Citizen	
BIO 105	General Biology	

CHM 103 General Chemistry I

Total Credits 8-9**Exit survey requirement**

During the student's last semester of enrollment, completion of the Department of Geography and Earth Science exit survey is required in order to graduate.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 475)
- Baccalaureate degree requirements (p. 476)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs ¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses

may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Exit survey requirement

During the student's last semester of enrollment, completion of the Department of Geography and Earth Science exit survey is required in order to graduate.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a

degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 478)
- Baccalaureate degree requirements (p. 478)

College of Science and Health (CSH) Bachelor of Arts core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 210, BIO 304, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Arts degree, students must complete a major from the college and proficiency in a world language at the 202 level or an ESL proficiency score of 80 or above on the La Crosse Battery of exams for non-native speakers of English. Contact the *“English as a Second Language Institute”* for eligibility and regulations. Students must also complete one of the following options. It is recommended that courses are selected in consultation with your advisor.

1. Complete a minor in the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Arts; or
2. Complete an individualized option, consisting of 15 credits.
 - a. These courses must be from the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Art.
 - b. At least 9 credits must be earned at the 300/400 level.
 - c. General education courses may apply provided they are not being used to fulfill minimum general education requirements.
 - d. Internship credits may not count toward the individualized option.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}

5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term.  - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA. ^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA ^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence.

December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

- ¹ A maximum of three credits of GEO 450 may apply to the major.
- ² A maximum of three credits of GEO 470 may apply to the major.
- ³ A maximum of three credits of GEO 490 may apply to the major.
- ⁴ A maximum of three credits of GEO 495 may apply to the major.
- ⁵ A maximum of three credits of GEO 499 may apply to the major.

Exit survey requirement

During the student's last semester of enrollment, completion of the Department of Geography and Earth Science exit survey is required in order to graduate.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 482)
- Baccalaureate degree requirements (p. 483)

College of Science and Health (CSH) Bachelor of Arts core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 210, BIO 304, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Arts degree, students must complete a major from the college and proficiency in a world language at the 202 level or an ESL proficiency score of 80 or above on the La Crosse Battery of exams for non-native speakers of English. Contact the "*English as a Second Language Institute*" for eligibility and regulations. Students must also complete one of the following options. It is recommended that courses are selected in consultation with your advisor.

1. Complete a minor in the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Arts; or
2. Complete an individualized option, consisting of 15 credits.

- These courses must be from the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Art.
- At least 9 credits must be earned at the 300/400 level.
- General education courses may apply provided they are not being used to fulfill minimum general education requirements.
- Internship credits may not count toward the individualized option.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

- Fulfill the general education requirements.
- Complete at least one ethnic studies (diversity) course.
- Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
- Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
- At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
- Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
- A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
- Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 485)
- Baccalaureate degree requirements (p. 485)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Earth Science Minor

(All colleges)

24 credits

Code	Title	Credits
ESC 101	Earth Environments	4
ESC 221	Weather and Climate	4
ESC 222	Earth Surface Processes and Landforms	4
Select two of the following:		6
GEO 340	Earth's Polar Regions	
GEO 422	Meteorology	
GEO 425	Biogeography	
GEO 427	Sustainable Water Resource Management	
GEO 428	Past Environmental Change	
GEO 430	River Systems	
GEO 460	Environmental Hazards	

Complete six additional credits, three of which must be at the 300-level or above, from the list above or the following:

GEO 211	Global Climate Change	
GEO 305	Geographic Information Systems and Science I	
GEO 321	Sustainable Development and Conservation	
GEO 405	Geographic Information System and Science II	
GEO 410	Geospatial Field Methods	
GEO 412	Geospatial Applications of Unmanned Aerial Systems	
GEO 415	Remote Sensing of the Environment I	
GEO 418	Map Design and Geovisualization	

GEO 440	Geographic Interpretation of Aerial Photographs
GEO 445	Remote Sensing of the Environment II
GEO 450	Internship in Geography and Earth Science ¹
GEO 455	Web Mapping
GEO 465	Scripting in GIS
GEO 470	Special Topics in Geography/Earth Science
GEO 485	Geographic Information System and Science III
GEO 490	Independent Study ¹
GEO 495	Seminar in Geography/Earth Science
GEO 499	Undergraduate Research ¹
Total Credits	24

¹ Only three credits from a combination of GEO 450 or GEO 490 or GEO 499 will apply.

All geography majors who select the earth science minor must take 54 GEO or ESC unduplicated credits in the courses listed across their major and minor.

A maximum of six credits may be double counted between the General Education Program and the minor.

Geoarchaeology Minor

(All colleges)

21 credits

Code	Title	Credits
ARC 100	Archaeology: Discovering Our Past	3
ARC 196	Archaeology: An Introduction to Lab and Field Methods	1
ESC 101	Earth Environments	4
ESC 222	Earth Surface Processes and Landforms	4
Select three courses from the following list:		9-12
ARC 402	Field Methods in Archaeology	
ARC 404	Environmental Archaeology	
GEO 305	Geographic Information Systems and Science I	
GEO 405	Geographic Information System and Science II	
GEO 410	Geospatial Field Methods	
GEO 412	Geospatial Applications of Unmanned Aerial Systems	
GEO 415	Remote Sensing of the Environment I	
GEO 428	Past Environmental Change	
GEO 430	River Systems	
GEO 440	Geographic Interpretation of Aerial Photographs	
GEO 445	Remote Sensing of the Environment II	
GEO 485	Geographic Information System and Science III	
Total Credits		21

Archaeological studies majors may only duplicate six credits between the geoarchaeology minor and their major.

Geography majors may only duplicate six credits between the geoarchaeology minor and their major.

Geographic Information Science Minor

(All colleges; not open to geography and earth science majors and minors)

18 credits

Code	Title	Credits
Core		
GEO 305	Geographic Information Systems and Science I	3
GEO 405	Geographic Information System and Science II	3
GEO 485	Geographic Information System and Science III	3
Electives		
Select at least nine credits of the following:		9
GEO 410	Geospatial Field Methods	
GEO 412	Geospatial Applications of Unmanned Aerial Systems	
GEO 415	Remote Sensing of the Environment I	
GEO 418	Map Design and Geovisualization	
GEO 440	Geographic Interpretation of Aerial Photographs	
GEO 445	Remote Sensing of the Environment II	
GEO 450	Internship in Geography and Earth Science ¹	
	or GEO 490 Independent Study	
	or GEO 499 Undergraduate Research	
GEO 455	Web Mapping	
GEO 465	Scripting in GIS	

Total Credits **18**

¹ Maximum three credits can be applied to the minor from GEO 450, GEO 490, or GEO 499.

Students in this minor are required to take STAT 145.

Human and Environmental Geography Minor

(All colleges)

18 credits

Code	Title	Credits
GEO 110	World Cultural Regions	3
GEO 200	Conservation of Global Environments	3
Electives (at least nine credits must be at the 300/400-level)		12
GEO 102	Maps and Society	
GEO 202	Contemporary Global Issues	
GEO 211	Global Climate Change	
GEO 307	Power, Space, and Global Change	
GEO 309	Urban Geography	
GEO 310	Transportation Geography	
GEO 318	The Geography of Latin America and the Caribbean	
GEO 321	Sustainable Development and Conservation	
GEO 335	Islamic Asia: Cradle of Civilizations, Geographies of Conflict	
GEO 340	Earth's Polar Regions	

GEO 427	Sustainable Water Resource Management
GEO 470	Special Topics in Geography/Earth Science ¹
GEO 495	Seminar in Geography/Earth Science ²
Total Credits	
18	

¹ A maximum of three credits of GEO 470 may be applied to the minor.

² A maximum of three credits of GEO 495 may be applied to the minor.

A maximum of six credits may be double counted between the General Education Program and the minor.

Geographic Information Science Certificate

Applications of Geographic Information Systems and Science (GIS) range from business planning and public health to ecosystem management. GIS is a tool for studying spatial problems. It links a database with map features in such a way that users can input, store, retrieve, and analyze geographic data. Students choosing this program acquire the skills and knowledge necessary to apply GIS in their chosen field of study. Students should discuss the elective courses with the program advisor to better align them with their interest.

Upon completion of the program, students need to have a cumulative GPA of at least 2.5 and students need to submit a professional portfolio to the program advisor.

(All colleges, open only to degree-seeking UWL students)

12 credits

Code	Title	Credits
Core		
GEO 305	Geographic Information Systems and Science I	3
GEO 405	Geographic Information System and Science II	3
Electives		
Select six credits from the following:		6
GEO 410	Geospatial Field Methods	
GEO 412	Geospatial Applications of Unmanned Aerial Systems	
GEO 415	Remote Sensing of the Environment I	
GEO 418	Map Design and Geovisualization	
GEO 440	Geographic Interpretation of Aerial Photographs	
GEO 445	Remote Sensing of the Environment II	
GEO 455	Web Mapping	
GEO 465	Scripting in GIS	
GEO 485	Geographic Information System and Science III	
Total Credits		12

Not open to geography majors and GIS minors.

Geography and Earth Science Honors Program

Program

1. Admission
 - a. Junior standing
 - b. 15 completed credits of GEO or ESC courses

- c. Completion of ESC 101 Earth Environments (4 cr.), GEO 110 World Cultural Regions (3 cr.), GEO 200 Conservation of Global Environments (3 cr.), and GEO 305 Geographic Information Systems and Science I (3 cr.)
 - d. 3.25 grade point average in the major
 - e. Recommendation by two faculty members in the Department of Geography and Earth Science
 - f. Completion of Geography and Earth Science Honors Program admission form
2. Program
 - a. Completion of a major program in Geography and Earth Science
 - b. Completion of one credit of GEO 490 Independent Study (1-3 cr.), or GEO 499 Undergraduate Research (1-3 cr.), or McNair project
 - c. Write and present research or independent study project authored by student and mentored by Department of Geography and Earth Science faculty
 3. Evaluation
 - a. Cumulative 3.50 grade point average in the major and a cumulative grade point of 3.25 at graduation
 - b. Completion of a project in GEO 490 Independent Study (1-3 cr.), or GEO 499 Undergraduate Research (1-3 cr.), or McNair project. Presentation of the project to colloquium of faculty and students or at a conference selected in consultation with the department chair (options include UWL Research and Creativity, NCUR, or AAG).

Health Professions Department (HP)

College of Science and Health

Department Chair: Patrick Grabowski

4066 Health Science Center; 608.785.6623

Email: pgrabowski@uwlax.edu

www.uwlax.edu/health-professions (<http://www.uwlax.edu/health-professions/>)

The Department of Health Professions at UWL offers six exciting fully-accredited healthcare education programs. These programs are:

- Medical Dosimetry (<http://catalog.uwlax.edu/graduate/programrequirements/medicaldosimetry/>) (DOS - master's level),
- Nuclear Medicine Technology (p. 519) (NMT - bachelor's level),
- Occupational Therapy (<http://catalog.uwlax.edu/graduate/programrequirements/occupationaltherapy/>) (OT - master's level),
- Physical Therapy (<http://catalog.uwlax.edu/graduate/programrequirements/physicaltherapy/>) (DPT - doctorate level),
- Physician Assistant (<http://catalog.uwlax.edu/graduate/programrequirements/physicianassistant/>) (PAS - master's level), and
- Radiologic Science (p. 553) (RS - bachelor's level).

These programs have achieved regional and national recognition for excellence in professional health care education, and the placement rate of our graduating students approaches 100%.

Each of these programs has an identified professional curriculum including both didactic and clinical experiences which leads to a degree. Each program has defined pre-professional prerequisite and admission criteria, which must be completed before seeking admission to the professional program. UWL students interested in one of these fields will declare that discipline as a pre-professional second major (e.g. pre-OT)

prior to making formal application to that program. Students interested in transferring to UWL to enroll in a health professions program should consult that program for advice regarding transfer. Student participation in each program is governed by program specific policies that can be obtained directly from the program.

Each of the Health Professions Department programs requires students to have a criminal background check prior to beginning professional course work. These are required by health care institutions that students will be attending during their program. Unacceptable criminal background checks may jeopardize the student's ability to complete their professional program. Further information about the criminal background check is available on each program's website.

2022-23 Faculty/Staff

The following is the department's general staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

Mathematics and Statistics Department (MTH/STAT)

*College of Science and Health
Department Chair: Robert F. Allen
1015 Cowley Hall; 608.785.8383
Email: rallen@uwlax.edu*

www.uwlax.edu/mathematics (<http://www.uwlax.edu/mathematics/>)

Mathematics is the science and art of pattern and idea; statistics is the science of collecting, analyzing, and making inferences from data. There is no area that does not require some form of mathematical or statistical thought. It is an integral part of the liberal arts education and is the foundation for many areas of study. In filling many roles at UW-La Crosse, the Department of Mathematics and Statistics serves a diverse group of students; we nurture all liberal arts students, give students a solid foundation from which to study both the natural and social sciences, provide the tools needed by students in professional programs, and cultivate mathematics and statistics majors. As disciplines, mathematics and statistics can be studied by themselves or in conjunction with other fields such as the biological and life sciences, physical sciences, engineering, and social sciences.

Students who graduate with degrees in mathematics or statistics pursue a wide variety of careers. Our math education majors are sought after to fill a huge need for quality math teachers in our country. Many of our statistics and applied math majors go on to jobs in industry as analysts, statisticians, and actuaries while others go on to professional programs such as law, medicine and health professions, or business.

With degrees from our program, students have gone to graduate programs in mathematics, applied mathematics, statistics, engineering, and computer science.

The faculty of the Department of Mathematics and Statistics is committed to being excellent teacher-scholars. Members of the department are involved in research in areas of algebra, analysis, topology and geometry, statistics, applied mathematics, numerical analysis, education, and combinatorics and graph theory. This research is widely published in prestigious research journals, and many faculty have received numerous grants. Technology is integrated into both the teaching and research in the department. Many students participate in undergraduate research projects that result in publications and presentations at national conferences.

Mathematics and statistics are interesting and lively subjects. Mathematics has both an aesthetic and a practical appeal; the enjoyment of problem solving, abstract thinking, and structural beauty draws many to mathematics. Statistics helps us understand and describe phenomena in our world and to help us draw reliable conclusions about those phenomena. The challenge and satisfaction of using mathematics and statistics to solve real world problems provides an equally strong appeal. #UWLmath

Mathematics and Statistics credit by examination policy

The Department of Mathematics and Statistics awards credit by examination in MTH 150 College Algebra (4 cr.); MTH 151 Precalculus (4 cr.); MTH 207 Calculus I (5 cr.); and MTH 208 Calculus II (4 cr.). The exams may be taken by new first years and are scheduled for the second week of semester I. Students may not earn credit by examination in both MTH 150 and MTH 151. Credit for STAT 145 Elementary Statistics (4 cr.) will be granted to entering first years with a College Board Advanced Placement Statistics Examination score of 3 or better. Credit for MTH 207 will be granted to entering first years with a College Board Advanced Placement AB exam score of 4 or better. Entering first years with a score of 3 on the BC Calculus examination are awarded credit for MTH 207; students with a score of 4 or 5 on the BC Calculus examination are awarded credit for both MTH 207 and MTH 208.

Mathematics and Statistics retroactive credit policy

Students taking MTH 207 Calculus I, MTH 208 Calculus II, MTH 308 Linear Algebra with Differential Equations, MTH 309 Linear Algebra, or MTH 310 Calculus III: Multivariable Calculus, and earning a grade of "B" or better, will be given retroactive credit for MTH 151 Precalculus provided that the student's transcript shows no record of prior or concurrent enrollment in MTH 151, MTH 207, MTH 208, MTH 225, MTH 308, MTH 309, or MTH 310.

General education writing emphasis

This department incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete a major in this department will fulfill the general education writing emphasis requirement (p. 66).

2022-23 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

¹ May substitute CS 225 for MTH 225.

In addition CS 120 Software Design I (4 cr.) must be taken.

Degree Requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 491)
- Baccalaureate degree requirements (p. 491)

College of Science and Health (CSH) Bachelor of Arts core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 210, BIO 304, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the

math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Arts degree, students must complete a major from the college and proficiency in a world language at the 202 level or an ESL proficiency score of 80 or above on the La Crosse Battery of exams for non-native speakers of English. Contact the "*English as a Second Language Institute*" for eligibility and regulations. Students must also complete one of the following options. It is recommended that courses are selected in consultation with your advisor.

1. Complete a minor in the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Arts; or
2. Complete an individualized option, consisting of 15 credits.
 - a. These courses must be from the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Art.
 - b. At least 9 credits must be earned at the 300/400 level.
 - c. General education courses may apply provided they are not being used to fulfill minimum general education requirements.
 - d. Internship credits may not count toward the individualized option.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlox.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlox.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Year 1

Degree Requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 493)
- Baccalaureate degree requirements (p. 493)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.

3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

STAT 441	Mathematical Statistics I	
STAT 442	Mathematical Statistics II	
STAT 448	Operations Research	
Total Credits		39

¹ May substitute CS 225 for MTH 225.

² Three of these credits may be met by completing one of the following courses: CHM 310 Physical Chemistry Theory II (3 cr.), CS 453 Introduction to Theory of Computation (3 cr.), PHY 470 Advanced Quantum Mechanics (3 cr.), PHY 474 Advanced Computational Physics (3 cr.)

In addition, CS 120 Software Design I (4 cr.) must be taken.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 495)
- Baccalaureate degree requirements (p. 495)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs ¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA. ^{1,2}

5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA¹,² in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Mathematics Education (Grades 4-12) Major - Bachelor of Science (BS)

Major requirements

Completion of the Mathematics Education Program and associated benchmark assessments (<http://catalog.uwlax.edu/undergraduate/education/#SOE-program-requirements>) will lead to endorsement for the following Wisconsin teaching license:

- Middle and High School Mathematics, grades 4-12 (1400).

Students in all education programs must satisfy the School of Education (SOE) core requirements (p. 597).

Students in all teacher education programs must be admitted to the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) in order to complete their program requirements and be eligible for endorsement for the appropriate teaching license(s). Students majoring in mathematics education (grades 4-12) must meet specific program admission criteria (p. 595).

Retention and advancement

Teacher candidates may be retained in their teacher education program provided they fulfill the conditions described in the SOE Retention Policy (<http://catalog.uwlax.edu/undergraduate/education/#retention>). Students must complete all course requirements and other benchmarks prior to student teaching as described in the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>). Additional SOE program requirements, including the culminating assessment of pedagogical knowledge, are described on the SOE catalog page (<http://catalog.uwlax.edu/undergraduate/education/>).

Curriculum

The Mathematics Education Program is aligned with InTASC Teacher Standards and the National Council of Teachers of Mathematics (NCTM) Standards.

Required general education courses (13 credits)

Besides the courses specified below, mathematics education majors will need to satisfy additional general education requirements (<http://catalog.uwlax.edu/undergraduate/generaleducation/#generaleducationrequirements>). The General Education Program requires a total of 42 credits.

Code	Title	Credits
EDS 203	School, Society, and Teachers ^{1,4}	3
EDS 206	Multicultural Education ^{2,4}	3
MTH 207	Calculus I ³	5
MTH 215	Mathematics for Middle School Teachers I ³	2
Total Credits		13

¹ Counts toward General Education Program requirement: Self and Society (GE Category 6).

² Counts toward General Education Program requirement: Minority Cultures or Multiracial Women's Studies (GE Category 3).

³ Counts toward the General Education Program requirement: Mathematical/Logical Systems and Modern Languages (GE Category 2).

- Baccalaureate degree requirements (p. 500)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from

- i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
- ii. 300/400 level courses inside major not being used to fulfill major requirements.

c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Total Credits 55

¹ Students considering applying to the Dual Degree in Statistics and Applied Statistics Program should consult with their advisor or the chair of the Mathematics and Statistics Department before enrolling in STAT 443, STAT 447, or STAT 449.

In addition, CS 120 Software Design I must be taken.

Students may not double major in mathematics and statistics with concentration in actuarial science.

The following courses are approved by the Society of Actuaries for Validation by Educational Experience (VEE) credit:

Code	Title	Credits
STAT 442	Mathematical Statistics II	3
STAT 446	Analysis of Variance and Design of Experiments	3
ECO 110	Microeconomics and Public Policy	3
ECO 120	Global Macroeconomics	3
FIN 355	Principles of Financial Management	3

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 501)
- Baccalaureate degree requirements (p. 502)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

¹ See CSH BS Core Requirements (<http://catalog.uwlax.edu/undergraduate/scienceandhealth/#Core>) for information on completing the individualized option. 300/400 requirements for graduation may be impacted.

² Students considering applying to the Dual Degree in Statistics and Applied Statistics Program should consult with their advisor or the chair of the Mathematics and Statistics Department before enrolling in STAT 443, STAT 447, or STAT 449.

Dual Degree Program in Mathematics and Engineering

Major requirements

Students who express interest in the dual degree program will be selected for entrance into the UW-Madison, UW-Milwaukee, UW-Platteville, UW-Stout, University of Minnesota Duluth, or Winona State University portion of the program based on their GPA in all course work; their GPA in the chemistry, computer science, mathematics, and physics course work required by the program; and the positive recommendation of the UW-La Crosse Mathematics and Statistics Department Chair (or designee). The dual degree engineering agreement with UW-Madison has additional requirements for eligibility, including Wisconsin resident

status and that students must have enrolled in UW-La Crosse from high school (rather than transferring to UWL).

In order to receive the B.S. degree from UW-La Crosse, dual-degree students also must complete the remaining 35 credits (to total a minimum of 120 credits) in engineering at the partner institution and transfer these credits to UW-La Crosse. For the typical student, the remaining 35 credits must include at least 15 credits at the 300-level or above and at least 13 credits from the engineering college or institute. This transfer of credits and awarding of the B.S. degree by UW-La Crosse can take place as soon as the student earns the necessary credits.

Students are recommended to include the following courses in their work at UWL:

Code	Title	Credits
CHM 103	General Chemistry I	5
CHM 104	General Chemistry II	5
CS 120	Software Design I	4
ECO 110	Microeconomics and Public Policy	3
ECO 120	Global Macroeconomics	3
ECO 336	Women in the U.S. Economy	3
MTH 207	Calculus I	5
MTH 208	Calculus II	4
MTH 225	Foundations of Advanced Mathematics	4
MTH 308	Linear Algebra with Differential Equations	4
MTH 310	Calculus III: Multivariable Calculus	4
MTH 353	Differential Equations	3
MTH 371	Numerical Methods	3
MTH 480	Studies in Applied Mathematics	3
or MTH 461	Mathematical Physics	
PHY 203	General Physics I	4
PHY 204	General Physics II	4
PHY 321	Classical Mechanics	3
STAT 245	Probability and Statistics	4

Students interested in industrial engineering should add ACC 221 Accounting Principles I (3 cr.). Students should consult with the Mathematics and Statistics Department Chair for specific course and sequence advising for this agreement.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 503)
- Baccalaureate degree requirements (p. 504)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics

courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Dual Degree Program in Statistics and Applied Statistics

Major requirements

The Dual Degree Program in Statistics (B.S.) and Applied Statistics (M.S.) enables a UWL student to earn both a Bachelor of Science degree with a statistics major and a Master of Science degree in applied statistics in five years. Students in this dual degree program should complete the following by the end of their junior year:

Code	Title	Credits
MTH 207	Calculus I	5
MTH 208	Calculus II	4
STAT 245	Probability and Statistics	4
MTH 308	Linear Algebra with Differential Equations	4
or MTH 309	Linear Algebra	
MTH 310	Calculus III: Multivariable Calculus	4
MTH 371	Numerical Methods	3
or MTH 407	Real Analysis I	
or STAT 448	Operations Research	
STAT 345	Statistical Computing	3
STAT 440	Statistical Consulting	1
STAT 445	Correlation and Regression Analysis	3
STAT 446	Analysis of Variance and Design of Experiments	3
CS 120	Software Design I	4
Total Credits		38

During the senior year, students will complete the Group I courses and two courses from Group II. In the fifth year, students will complete an additional four courses from Group II. Undergraduates may take up to nine graduate credits total while still undergraduate students.

Code	Title	Credits
Group I		
STAT 541	Mathematical Statistics I	3
STAT 542	Mathematical Statistics II	3
Group II		
STAT 543	Categorical Data Analysis	3
STAT 547	Nonparametric Statistics	3
STAT 549	Applied Multivariate Statistics	3
STAT 762	Bayesian Statistics	3
STAT 763	Survey of Modern Statistical Software	3
STAT 764	Statistical Learning	3
STAT 766	Biostatistics	3

Graduate project portfolio (6 credits):

Students enrolling in STAT 543, STAT 547, STAT 549, STAT 762, STAT 763, STAT 764, or STAT 766 must enroll at the same time in one credit of STAT 796 per accompanying course. In STAT 796, students complete a project related to the content of the accompanying class. STAT 796 can be taken multiple times in the same term. A total of six credits of STAT 796 are required for completion of the program.

Code	Title	Credits
STAT 796	Graduate Project in Applied Statistics (one credit, repeated six times)	6

Students may be accepted into the dual degree program anytime before they have completed 75 undergraduate credit hours. Applicants for undergraduate admission to UWL may request admission into the dual degree program. In order to remain in the program students must maintain a 2.75 GPA in all undergraduate major courses and 3.00 GPA in all graduate courses. Award of the Bachelor of Science degree will occur upon completion of 120 credits, the statistics major requirements, the CSH college core requirements, and the general university requirements. Students are allowed to take up to nine graduate credits as undergraduate students but must have degree-seeking graduate student status before registering for additional graduate credits (normally in the second semester of the senior year). Award of the Master of Science degree in applied statistics will occur after the completion of the B.S. and the M.S. in applied statistics requirements.

Contact the M.S. in Applied Statistics Program (<https://www.uwlax.edu/grad/statistics/>) Director for application information. See the online graduate catalog for more information about the Applied Statistics Master of Science Program.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 505)
- Baccalaureate degree requirements (p. 505)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is

recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Total Credits: 144

¹ Should be completed by the end of the junior year.

² MTH 407 is offered in the **fall** whereas MTH 371 is offered in the **spring**. STAT 448 is offered spring odd numbered years. Plan your schedule accordingly.

³ See CSH BS Core Requirements (<http://catalog.uwlax.edu/undergraduate/scienceandhealth/#Core>) for information on completing the individualized option. 300/400 requirements for graduation may be impacted.

Mathematics Minor

(All colleges)

22 credits

Code	Title	Credits
MTH 207	Calculus I	5
MTH 208	Calculus II	4
MTH 308	Linear Algebra with Differential Equations	4
or MTH 309	Linear Algebra	
Select nine credits of the following: ¹		9
MTH 225	Foundations of Advanced Mathematics ²	
STAT 245	Probability and Statistics	
MTH 265	Mathematical Models in Biology	
MTH courses numbered 300 and above		
Total Credits		22

¹ Credit for MTH 151 Precalculus (4 cr.) may be used to fulfill three of the nine additional credits.

² Can substitute CS 225 for MTH 225. Credit will be given for only one course.

Computer science majors may count MTH 317 Graph Theory (3 cr.), MTH 371 Numerical Methods (3 cr.) and CS 453 Introduction to Theory of Computation (3 cr.) for credit in both the computer science major and the mathematics minor.

Physics majors may count MTH 461 Mathematical Physics (3 cr.) and PHY 470 Advanced Quantum Mechanics (3 cr.) for credit in both the physics major and the mathematics minor.

Students with a major in statistics, statistics with a concentration in actuarial science, or the dual degree program in statistics and MS applied statistics cannot declare the mathematics minor.

Mathematics for Teachers Minor

Minor requirements

(Open to students in the following majors: Early Childhood Education (birth-grade 3), Elementary/Middle Education (grades K-9), Elementary/Middle Education (grades K-9) & French Education (grades K-12), Elementary/Middle Education (grades K-9) & Spanish Education (grades K-12), Elementary/Middle Education (grades K-9) & Special Education (grades K-12), Elementary/Middle Education (grades K-9) & TESOL (grades K-12))

Completion of the mathematics for teachers minor does not lead to endorsement for a Wisconsin teaching license. Rather, the minor is intended to expand content knowledge and skills in elementary and middle grade math.

19-20 credits (total credits may increase based on math placement scores)

Code	Title	Credits
MTH 116	Mathematics for Early Childhood and Elementary Teachers II	2
MTH 175	Applied Calculus	4-5
or MTH 207	Calculus I	
MTH 215	Mathematics for Middle School Teachers I ¹	2
MTH 216	Mathematics for Middle School Teachers II	2
MTH 315	Algebraic Structures for Middle and High School Teachers	3
MTH 316	Geometry for Middle and High School Teachers	3
MTH 321	Teaching Mathematics with Technology	3
Total Credits		19-20

¹ Prerequisite: grade of "C" or better in MTH 115.

Statistics Minor

(All colleges)

20 credits

Code	Title	Credits
Core		
MTH 175	Applied Calculus	4-5
or MTH 207	Calculus I	
STAT 145	Elementary Statistics	4
or STAT 245	Probability and Statistics	
STAT 405	Statistical Methods	3
Electives		
Select nine credits of the following:		9
STAT 443	Categorical Data Analysis	
STAT 445	Correlation and Regression Analysis	
STAT 446	Analysis of Variance and Design of Experiments	
STAT 447	Nonparametric Statistics	
STAT 448	Operations Research	
STAT 449	Applied Multivariate Statistics	
Total Credits		20

With the approval of the Department of Mathematics and Statistics Chair, a research methods course from another department may be substituted for three of the nine additional credits.

Mathematics Honors Program

The honors program is designed to give qualified students the opportunity to develop their understanding of and skills in research. The honors project is an extensive piece of research designed and conducted by the student under the supervision of a faculty mentor.

Program

Minimum requirements for admission to the Mathematics Honors Program

1. Junior standing with a declared major of mathematics, applied mathematics, statistics, actuarial science, or secondary mathematics education.
2. Completion of MTH 207, MTH 208, MTH 308 or MTH 309, and MTH 310.
3. A resident cumulative mathematics grade point average of 3.25.

4. A resident cumulative overall grade point average of 3.00.
5. Approval of a completed application by a faculty committee.

Requirements for degree with Mathematics Honors

1. Admission into Mathematics Honors Program.
2. Completion of degree in mathematics, applied mathematics, statistics, actuarial science, or secondary mathematics education.
3. A resident cumulative mathematics grade point average of 3.50.¹
4. A resident cumulative overall grade point average of 3.25.¹
5. Completion of honors project
 - a. Completion of 3 credits chosen from MTH 495, STAT 496, MTH 498, MTH 499, or other approved course.
 - b. Completion of a written document of the project authored by the student and approved by the faculty mentor.
 - c. Presentation of project at a seminar, colloquium, or conference (local, regional, national, or international), pre-approved by the faculty mentor and the chair of the math honors program committee.

¹ Grade point average calculations are based on the last term prior to the term of graduation.

Microbiology Department (MIC)

College of Science and Health
Department Chair: Michael Hoffman
 3023 Cowley Hall; 608.785.6984
 Email: mhoffman@uwlax.edu

www.uwlax.edu/microbiology (<http://www.uwlax.edu/microbiology/>)

Microbiology is the study of microscopic organisms, their activities, and applications. Although small in size, microorganisms play an enormous role in many areas of society including human health and disease, food, pharmaceutical and biotechnology industries, agriculture, and the environment. As a result of the widespread importance and application of microbiology, career opportunities are almost limitless. There are more microbiologists than any other type of biologist and the American Society for Microbiology is the oldest and largest single life science membership organization in the world.

The Department of Microbiology, located in Cowley Hall, supports undergraduate and graduate programs in microbiology. The **microbiology major** has been in existence since 1984 and the program has been recognized by the University of Wisconsin System as a Center of Excellence since 1988. The program is nationally known for excellence in undergraduate education and emphasizes laboratory competence in microbiology and related disciplines. A microbiology major provides a foundation for the abundant employment opportunities in microbiology and is also excellent preparation for graduate school or professional schools. Microbiology is cited as the major that best prepares pre-med students for the rigors of medical school.

The curriculum is based on the recommendations from the American Society for Microbiology, and is designed to ensure that graduates gain excellent, state-of-the-art experience in microbiology. After completing a core of microbiology courses, students may choose electives that allow them to specialize in specific areas. A large number of electives are available in areas of virology, parasitology, mycology, molecular biology, bioinformatics, food and industrial microbiology, environmental microbiology, plant microbiology, and research. Students may also elect a biomedical, environmental science, or business concentration with slightly different curricula. A particular emphasis of the UW-La Crosse microbiology major is laboratory competence. Faculty have

received more than one million dollars in educational grants to ensure that teaching laboratories are equipped with the latest equipment. Microbiology majors receive more laboratory instruction than any other major on campus, which results in exceptionally high employability.

Center of Excellence in Microbiology

The University of Wisconsin System and the Board of Regents have identified the microbiology program at UWL as a Center of Excellence based on the exceptional quality of the undergraduate laboratory science education. The microbiology program has been nationally recognized for the overall quality of the program and prepares its graduates for a diversity of professional opportunities at the baccalaureate level. Since the inception of a major in 1984, more than 95 percent of the microbiology graduates interested in employment have obtained positions in hospitals, clinics, private laboratories, food and fermentation industries, biotechnology companies, pharmaceutical industries, universities, and government agencies.

Microbiology is also an excellent curricular track to prepare students for graduate or professional schools (medical, dental, veterinary, optometry).

The microbiology major is housed within the Department of Microbiology and provides students an extensive curriculum with a strong laboratory emphasis. The Department of Microbiology faculty have obtained over one million dollars in grant funding within the past decade to ensure that students gain experience in the latest state-of-the-art techniques. Students may choose from an extensive list of microbiology electives and tailor their major to meet their career goals. In addition to the microbiology major, the department also offers microbiology majors with concentrations in biomedical, business, and environmental science for students wishing to focus in these areas.

All microbiology majors receive individual counseling throughout their undergraduate years. The faculty have active research programs providing abundant opportunities for undergraduate research. In addition, numerous internships are available with local and regional laboratories for microbiology majors. An active microbiology club affiliated with the American Society for Microbiology enhances the educational experience. For additional information regarding the Center of Excellence in Microbiology, contact the microbiology department chair, Cowley Hall, University of Wisconsin-La Crosse, La Crosse, WI 54601 USA.

General education writing emphasis

This department incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete a major in this department will fulfill the general education writing emphasis requirement (p. 66).

2022-23 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

MIC 479	Microbiology Laboratory Assistant (only one credit applies to List III)	1-2
MIC 489	Independent Study in Microbiology	1-2
MIC 499	Independent Research in Microbiology	1-2

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 510)
- Baccalaureate degree requirements (p. 510)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements

(GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/regISTRATION/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from

- i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
- c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

FIN 355	Principles of Financial Management	3
MGT 308	Organizational Behavior	3
MKT 309	Principles of Marketing	3

Microbiology/biology electives (see elective lists below)¹ 5-7

Select at least three credits from List I.

One course from List II strongly recommended.

A maximum of two credits from List III.

Additional requirements

Select one course in math, STAT 145 or above 4-5

Select one course in physics: 4

PHY 125 Physics for the Life Sciences

PHY 104 Fundamental Physics II

PHY 204 General Physics II

Select a minimum of 19 credits of chemistry including: 19

CHM 103 General Chemistry I

CHM 104 General Chemistry II

Select one of the following:

CHM 300 & CHM 302 Fundamental Organic Chemistry and Fundamental Organic Chemistry Laboratory

CHM 303 & CHM 304 & CHM 302 Organic Chemistry Theory I and Organic Chemistry Theory II and Fundamental Organic Chemistry Laboratory

CHM 303 & CHM 304 & CHM 305 Organic Chemistry Theory I and Organic Chemistry Theory II and Organic Chemistry Laboratory

Select one of the following:

CHM 325 Fundamental Biochemistry

CHM 417 & CHM 418 Biochemistry I: Macromolecules and Biochemistry II: Metabolism and Genetic Information

Total Credits 86

¹ The combination of biology core, microbiology core, and elective credits must total 35.

The physics series PHY 103 Fundamental Physics I (4 cr.)/PHY 104 Fundamental Physics II (4 cr.) or PHY 203 General Physics I (4 cr.)/PHY 204 General Physics II (4 cr.) may be required for students pursuing graduate or professional degrees.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 515)
- Baccalaureate degree requirements (p. 515)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.

- b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
- c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course

descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

MIC 499	Independent Research in Microbiology	

Total Credits 18

¹ If three credits are selected, 11 credits are required from the elective lists for a total of 18 credits for the minor. If four credits are selected, 10 credits are required from the elective lists for a total of 18 credits for the minor.

Microbiology Honors Program

The honors program is designed to recognize outstanding academic performance and understanding of research in microbiology.

Program

Requirements for admission into the honors program are:

1. Junior Standing
2. Completion of the application for continuation in the major (completion of one semester math, three semesters of chemistry, and twelve credits in the major including MIC 230).
3. Provide a transcript demonstrating a 3.25 GPA in biology, chemistry and microbiology courses and a cumulative overall GPA of 3.25.
4. Recommendation by two faculty members from the department.

Requirements for earning a degree with honors in microbiology include:

1. Completion of all major requirements with a cumulative GPA in the major of 3.5 and a cumulative overall GPA of 3.25.
2. Completion of a minimum of two credits of MIC 499.
3. Presentation of results of MIC 499 research at a colloquium of faculty and students or at a professional meeting.

Students graduating with honors in microbiology will receive an honors certificate.

Nuclear Medicine Technology Program (NMT)

College of Science and Health
Health Professions Department
Program Director: Angela Weiler
4032 Health Science Center, 608.785.8470
Email: nmtprogram@uwlax.edu

www.uwlax.edu/health-professions/undergraduate-majorsminors/nuclear-medicine-technology/ (<https://www.uwlax.edu/health-professions/undergraduate-majorsminors/nuclear-medicine-technology/>)

Nuclear medicine technology is a health professions specialty employing the use of radiopharmaceuticals for diagnostic and therapeutic purposes. Students majoring in this program are provided a substantial educational foundation in the sciences and clinical applications in a hospital internship so that graduates may function as technologists. The pre-professional and professional program collectively requires six semesters on campus to earn a minimum of 71 credits including certain prescribed courses followed by a 12-month internship at an affiliated internship site.

Major

- Nuclear medicine technology - BS (p. 520)

Nuclear Medicine Technology Major - Bachelor of Science (BS)

Major requirements

(College of Science and Health)

Nuclear Medicine Technology admission policy

The university sponsors up to 28 clinical interns each year. The size of the nuclear medicine technology program is limited by these internships. Students must make formal application to the program during the fall semester of either their sophomore or junior year (see adviser). Refer to the sample degree plan tab. A Nuclear Medicine Technology Professional Program Selection Committee composed of representatives from the university, healthcare community, and the program's clinical affiliates evaluates each application on the basis of the applicant's past academic performance (a minimum cumulative GPA of 2.50 is required for admission into the professional program), their references, their past work experience, and the results of a formal interview. Based on these factors, the applicants are ranked and accepted for entry into the professional program.

Nuclear Medicine Technology admission to internship and completion of degree policy

Those students admitted to the professional curriculum will be eligible for an internship upon successful completion of the on-campus course requirements and selection by a clinical affiliate. Acceptance into the professional program does not guarantee an internship at a hospital. The hospitals select students for internships. During the senior year, clinical internship students will register for (or be allowed to transfer in from Mayo's NMT program) a minimum of 34 semester credits in clinical courses and pay full tuition and fees. Upon successful completion of the internship and all other university requirements, students are awarded a Bachelor of Science degree with a major in nuclear medicine technology.

Hospital educational programs of nuclear medicine technology are accredited by the Joint Review Committee on Educational Programs in Nuclear Medicine Technology (JRCNMT). Graduates are eligible to take the examination for certification as a certified nuclear medicine technologist offered by the Nuclear Medicine Technology Certification Board (NMTCB) or as a nuclear medicine technologist offered by the American Registry of Radiologic Technologists (ARRT).

Nuclear medicine technology affiliated internship sites:

- Mayo Clinic, School of Health Sciences, Rochester, MN¹
- Froedtert Hospital, Milwaukee, WI
- Marshfield Clinic, Marshfield, WI
- Aurora St. Luke's Hospital, Milwaukee, WI
- Northwestern Memorial Hospital, Chicago, IL
- UW Health Hospitals and Clinics, Madison, WI
- UM Fairview Medical Center, Minneapolis, MN
- Gundersen Health, La Crosse, WI
- VA Minneapolis, Minneapolis, MN

¹ Nuclear Medicine Technology students who select to complete the required year-long clinical at the Mayo School of Health Sciences (MSHS) enroll at MSHS rather than at UW-La Crosse. The courses taken during the year-long clinical at MSHS meet UW-La Crosse NMT program requirements. The student must request an official transcript to be sent to UW-La Crosse from MSHS. Upon successful completion of the clinical and all other graduation requirements, the students are awarded the Bachelor of Science degree from UW-La Crosse. The Mayo School of Health Sciences (MSHS) grants a Certificate of Completion in Nuclear Medicine Technology.

Curriculum

105 credits, including internship

Code	Title	Credits
Pre-professional requirements		
BIO 105	General Biology ¹	4
BIO 312	Human Anatomy and Physiology I	4
BIO 313	Human Anatomy and Physiology II	4
CHM 103	General Chemistry I ¹	5

BIO 432	Biology of Cancer	
CST 354	Health Communication	
SOC 420	Health Care and Illness	
SOC 422	Death, Grief, and Bereavement	
ECO 350	Health Economics	
ESS 201	Safety, First Aid and CPR	
MIC 230	Fundamentals of Microbiology	

NMT 499	Independent Study	
Total Credits		71

¹ This course can also fulfill general education requirements.

It is required that students have at least 10 hours of observation in a nuclear medicine department before they apply to the professional program. Students must have completed all courses taught at UWL prior to their clinical internship experience. All courses must be completed with a grade of "C" or above. A cumulative grade point average of 2.50 on a 4.00 scale is required for acceptance into the professional program, maintenance of accepted status, and for graduation with a major in nuclear medicine technology.

Clinical Internship Requirements (34 credits)

Each NMT intern will enroll in clinical courses for a minimum of 34 credits from the following selection.

Code	Title	Credits
NMT 401	Management and Methods of Patient Care I	2
NMT 403	Anatomy, Physiology and Pathology	2-4
NMT 404	Management and Methods of Patient Care II	3
NMT 405	Radiation Protection	1-5
NMT 407	Clinical Instrumentation and Techniques	2-5
NMT 412	Clinical Nuclear Practicum I	3-9
NMT 413	Clinical Nuclear Practicum II	3-9
NMT 416	Nuclear Medicine Quality Control Practicum	1-3
NMT 417	Nuclear Radiation Physics and Instrumentation	2-5
NMT 418	Clinical Procedures Review I	1-3
NMT 419	Clinical Radiation Biology	1-3
NMT 422	Clinical Procedures Review II	1-4
NMT 423	Radiopharmacy and Pharmacology (Name to be changed)	1-5
NMT 427	Clinical Evaluation of Mathematical Data in Nuclear Medicine	1-5
NMT 429	Multimodality Imaging	1-5
NMT 499	Independent Study	3

All of the above courses are not required but a minimum of 34 credits must be earned in the array required by the clinical internship site.

Degree requirements

All students must complete the general education, college core (waived for nuclear medicine technology majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 521)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.

3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

Nutrition Program (NUT)

College of Science and Health
Program Coordinator: Lisa Kobs
0021 Health Science Center, 608.785.6457

Email: lkobs@uwlax.edu

The **nutrition minor** serves a variety of College of Science and Health students, including those in pre-allied health, pre-medicine, exercise and sport science, and health education. Non-CSH majors in psychology, sociology, and business also may be interested in the nutrition minor.

The nutrition minor at UWL includes 18 credits of nutrition-related course work meant for students who may enter professions where an understanding of food and nutrition will be helpful and make them more competitive for employment or graduate school. For more information contact Lisa Kobs (lkobs@uwlax.edu), Kris Greany (kgreany@uwlax.edu) or Peg Maher (mmaher@uwlax.edu). The nutrition faculty offices are located in the basement of the Health Science Center, suite 0016. Stop by and get some food for thought!

The minor **does not** provide enough nutrition coursework or the supervised practice (1200 hours) required to be eligible for the registered dietitian (RD) credential. For more information about accredited dietetics programs leading to the RD credential, please visit: www.eatright.org (<http://www.eatright.org/>).

Physics Department (PHY)

College of Science and Health
 Department Chair: Shelly Leshler
 2010 Cowley Hall; 608.785.8401
 Email: slesher@uwlax.edu

www.uwlax.edu/physics (<http://www.uwlax.edu/physics/>)

The Physics Department at UW-La Crosse is one of the largest undergraduate physics programs in Wisconsin and is well-known for offering quality education, placing its graduates in successful career paths, and attracting national recognition for its successful efforts.

The diverse nature of the physics program makes our graduates highly sought after in modern industries where physics and engineering are applied. In addition, many UW-La Crosse physics graduates are accepted into top graduate degree programs where they can pursue a master's or doctoral degree in physics, engineering, chemistry, astrophysics, optical science, mathematics, medicine, or computer science.

In addition to our unique programs, the Physics Department also stands out in its emphasis on involving its physics majors in undergraduate research. This engages students to work closely with individual members of the faculty, providing hands-on learning opportunities which are very different from the traditional classroom experience. The involvement of students in research contributes to the sense of community that pervades the UW-La Crosse Physics Department. Research projects are available in the following areas: astrophysics, biomechanics, computational physics, laser spectroscopy, quantum computing, material science, nuclear physics, solid-state physics, and physics education.

General education writing emphasis

This department incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete a major in this department will fulfill the general education writing emphasis requirement (p. 66).

2022-23 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

Professor

Eric Barnes, Ph.D.

Jennifer Docktor, Ph.D.

Eric Gansen, Ph.D.

Ju Kim, Ph.D. (Dean, CSH)

Seth King, Ph.D.

Shelly Leshler, Ph.D. (Department Chair)

Robert Ragan, Ph.D.

Shauna Sallmen, Ph.D.

Gubbi Sudhakaran, Ph.D.

Associate Teaching Professor

Steven Verrall, Ph.D.

Assistant Teaching Professor

Mazin Khasawneh, Ph.D.

Administrative and Technical Support

Krista Anderson

Sarah Lantvit, Ph.D.

Majors

- Physics major - BA (p. 523)

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 524)
- Baccalaureate degree requirements (p. 524)

College of Science and Health (CSH) Bachelor of Arts core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 210, BIO 304, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Arts degree, students must complete a major from the college and proficiency in a world language at the 202 level or an ESL proficiency score of 80 or above on the La Crosse Battery of exams for non-native speakers of English. Contact the *"English as a Second Language Institute"* for eligibility and regulations. Students must also complete one of the following options. It is recommended that courses are selected in consultation with your advisor.

1. Complete a minor in the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Arts; or
2. Complete an individualized option, consisting of 15 credits.
 - a. These courses must be from the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Art.
 - b. At least 9 credits must be earned at the 300/400 level.
 - c. General education courses may apply provided they are not being used to fulfill minimum general education requirements.
 - d. Internship credits may not count toward the individualized option.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA¹ in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course

descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Total Credits		17

¹ PHY 203 and PHY 204 preferred.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 526)
- Baccalaureate degree requirements (p. 526)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.

c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
 2. Complete at least one ethnic studies (diversity) course.
 3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
 4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
 5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
 6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
 7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
 8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.
- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

- PHY 203 and PHY 204 are preferred.
- Students intending to pursue a graduate degree are strongly advised to take PHY 321 and PHY 332 and should consult with their physics advisor when choosing physics elective courses.

³ Excluding PHY 320, PHY 376, PHY 423, PHY 452, PHY 483, PHY 497. If PHY 498 Physics and Astronomy Research is chosen, the research must be astronomy related, and only three credits of PHY 498 may apply towards the major.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 530)
- Baccalaureate degree requirements (p. 530)

College of Science and Health (CSH) Bachelor of Arts core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 210, BIO 304, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Arts degree, students must complete a major from the college and proficiency in a world language at the 202 level or an ESL proficiency score of 80 or above on the La Crosse Battery of exams for non-native speakers of English. Contact the *"English as a Second Language Institute"* for eligibility and regulations. Students must also complete one of the following options. It is recommended that courses are selected in consultation with your advisor.

1. Complete a minor in the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Arts; or
2. Complete an individualized option, consisting of 15 credits.
 - a. These courses must be from the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Art.
 - b. At least 9 credits must be earned at the 300/400 level.
 - c. General education courses may apply provided they are not being used to fulfill minimum general education requirements.
 - d. Internship credits may not count toward the individualized option.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.

3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

- Baccalaureate degree requirements (p. 532)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses

may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to

the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 538)
- Baccalaureate degree requirements (p. 538)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)

4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a

degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 540)
- Baccalaureate degree requirements (p. 540)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course

requirements for a major or minor after the fourth week of the last semester of the senior year.)

4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
 5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
 6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
 7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
 8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.
- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Physics Major: Science Education (Grades 4-12) Concentration - Bachelor of Science (BS)

Major requirements

Completion of the Physics: Science Education Concentration Program and associated benchmark assessments (<http://catalog.uwlax.edu/undergraduate/education/#SOE-program-requirements>) will lead to endorsement for the following Wisconsin teaching license:

- Middle and High School Science, grades 4-12 (2600).

Students in all teacher education programs must satisfy the School of Education (SOE) core requirements (p. 597).

Students in all teacher education programs must be admitted to the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) in order to complete their program requirements and be eligible for endorsement for the appropriate teaching license(s). Students majoring in physics: science education (grades 4-12) must meet specific program admission criteria (p. 594).

Retention and advancement

Teacher candidates may be retained in their teacher education program provided they fulfill the conditions described in the SOE Retention Policy (<http://catalog.uwlax.edu/undergraduate/education/#retention>). Students must complete all course requirements and other benchmarks prior to student teaching as described in the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>). Additional SOE program requirements, including the culminating assessment of pedagogical knowledge, are described on the SOE catalog page (<http://catalog.uwlax.edu/undergraduate/education/>).

Curriculum

The Physics: Science Education Concentration Program is aligned with InTASC Teacher Standards and the National Science Teaching Association (NSTA) Standards.

Required general education courses (21-22 credits)

Besides the courses specified below, physics: science education concentration majors must satisfy additional general education requirements (<http://catalog.uwlax.edu/undergraduate/generaleducation/#generaleducationrequirementstext>). The General Education Program requires a total of 42 credits.

Code	Title	Credits
EDS 203	School, Society, and Teachers ^{1, 7}	3
EDS 206	Multicultural Education ^{2, 7}	3
Select two of the following: ³		8-9
MTH 150	College Algebra	
MTH 151	Precalculus	
MTH 207	Calculus I ⁴	

MTH 208	Calculus II ⁴	
GEO 200	Conservation of Global Environments ⁵	3
Select one of the following: ⁶		4
PHY 103	Fundamental Physics I	
PHY 203	General Physics I	
Total Credits		21-22

¹ Counts toward General Education Program requirement: Self and Society (GE Category 6).

² Counts toward General Education Program requirement: Minority Cultures or Multiracial Women's Studies (GE Category 3).

³ Counts toward the General Education Program requirement: Mathematical/Logical Systems and Modern Languages (GE Category 2).

⁴ MTH 207 and MTH 208 may count toward both the General Education Program requirement: Mathematical/Logical Systems and Modern Languages (GE Category 2) and the physics major content requirements.

⁵ Counts toward General Education Program requirement: International and Multicultural Studies, Global and Multicultural Studies (GE Category 4-2). Also satisfies both a science education core requirement and a WI statutory requirement for a teaching license in Science (2600).

⁶ Counts toward General Education Program requirement: Natural Laboratory Science (GE Category 5). Also satisfies a science education core requirement.

Science education core requirements (55 credits)

MTH 208	Calculus II ⁴	
Total Credits		18-27

⁷ Also satisfies an SOE core requirement.

⁸ Also satisfies a physics major content requirement.

⁹ Must complete all course requirements and other benchmarks prior to student teaching. For more information, please see the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>).

¹⁰ PHY 308, PHY 334, and PHY 453 are strongly recommended.

Additional teacher education requirements are listed on the School of Education (p. 591) catalog page.

Degree requirements

All teacher education students must complete the general education, School of Education, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- School of Education requirements (p. 591)
- Baccalaureate degree requirements (p. 542)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}

5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA¹,² in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete,

to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

¹ See the SOE admissions website (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) for complete admission and application details. Students will be required to complete a criminal background check (p. 597) at the time of application for admission.

- ² Students applying for field and student teaching placements will be asked to disclose any criminal charges (p. 600).
- ³ Students must apply for student teaching (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/for-teacher-candidates/>) through the Office of Field Experience one year prior to the student teaching semester.
- ⁴ For more information, please see the Student Teaching and Internship Policy (p. 600).

Dual Degree Program in Physics and Engineering

Major requirements

This is a special dual degree program which enables a student to receive both a Bachelor of Science degree (physics major) from UW-La Crosse and a Bachelor of Science degree (engineering major) from UW-Madison, UW-Milwaukee, UW-Platteville, UW-Stout, the University of Minnesota Duluth, or Winona State University. The total length of time for both degrees is expected to be five years, with approximately three years at UW-La Crosse (dating from enrollment in MTH 207 Calculus I (5 cr.)) and approximately two years at the partner institution. During the first three years, students will complete general education and college core requirements, engineering prerequisite course work, and many of the requirements for the physics major.

Engineering discipline and physics

Students wishing a dual degree in an **engineering discipline and physics** must complete a minimum of 85 credits at UW-La Crosse, including the following:

Code	Title	Credits
General education courses		
ECO 110	Microeconomics and Public Policy (recommended)	3
ECO 120	Global Macroeconomics (recommended)	3
ECO 336	Women in the U.S. Economy (recommended)	3
Math and chemistry courses		
CHM 103	General Chemistry I	5
CHM 104	General Chemistry II	5
MTH 207	Calculus I	5
MTH 208	Calculus II	4
MTH 309	Linear Algebra	4
MTH 310	Calculus III: Multivariable Calculus	4
Physics core		
PHY 203	General Physics I ¹	4
or PHY 103	Fundamental Physics I	
PHY 204	General Physics II ¹	4
or PHY 104	Fundamental Physics II	
PHY 305	General Physics III	3
PHY 306	Modern Physics	3
PHY 311	Experimental Physics	2
Select additional courses, depending on the specific engineering discipline, from the following:		
PHY 308	Optics	
PHY 320	Statics	
PHY 321	Classical Mechanics	
PHY 332	Electrodynamics	

PHY 334	Electrical Circuits
PHY 335	Electronics
PHY 343	Thermodynamics

- ¹ PHY 203 and PHY 204 preferred.

Additional courses, such as the following, may be required depending on the specific engineering discipline – be sure to consult the Physics Department dual degree advisor for details.

Code	Title	Credits
BIO 105	General Biology	4
CS 120	Software Design I	4
STAT 245	Probability and Statistics	4
MTH 353	Differential Equations	3

Students wishing a dual degree in **chemical engineering and physics** must also complete CHM 301 Analytical Chemistry (5 cr.).

Biomedical engineering and physics

Students wishing a dual degree in **biomedical engineering and physics** must complete a minimum of 85 credits at UW-La Crosse, including the following:

Code	Title	Credits
General education courses		
ECO 110	Microeconomics and Public Policy (recommended)	3

PHY 306	Modern Physics	3
PHY 311	Experimental Physics	2
Additional specified courses in biology, chemistry, microbiology, mathematics, and physics		

- ¹ PHY 203 and PHY 204 preferred.

Additional information

Students who express interest in the dual degree program will be selected for entrance into the UW-Madison, UW-Milwaukee, UW-Platteville, UW-Stout, University of Minnesota Duluth, or Winona State University portion of the program based on their GPA in all coursework; their GPA in the chemistry, computer science, mathematics, and physics coursework required by the program; and the positive recommendation of the UW-La Crosse Physics Department Chair (or designee). The dual degree engineering agreement with UW-Madison has additional

requirements for eligibility, including Wisconsin resident status and that students must have enrolled in UW-La Crosse from high school (rather than transferring to UWL).

In order to receive the B.S. degree from UW-La Crosse, dual degree students also must complete the remaining 35 credits (to total a minimum of 120 credits) in engineering at the partner institution and transfer these credits to UW-La Crosse. For the typical student, the remaining 35 credits must include at least 15 credits at the 300-level or above and at least 13 credits from the engineering college or institute. This transfer of credits and awarding of the B.S. degree by UW-La Crosse can take place as soon as the student earns the necessary credits.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 545)
- Baccalaureate degree requirements (p. 545)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.

- c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Year 1			
Fall	Credits	Spring	Credits
PHY 203 (Gen Ed Natural Lab Science)		4 PHY 204	4

Year 4

Fall	Credits
Transfer to Engineering Program at UW-Milwaukee, Madison, Platteville, Stout, UM-Duluth or Winona State University. Credits completed in the Engineering Program transfer back to UWL to complete requirements for the UWL degree.	0

Total Credits: 93

¹ Students should consult with their physics advisor when choosing elective course.

Dual Degree Program in Physics and Physical Therapy

Major requirements

This is a dual degree program which enables a student to receive both a Bachelor of Science degree (physics major with biomedical concentration) and a graduate degree (physical therapy) from UW-La Crosse. The total length of time for both degrees is expected to be six, with approximately three years in the physics program and approximately three in the physical therapy program. During the first three years, students will complete general education and college core requirements, physical therapy prerequisite course work, and many of the requirements for the physics major with biomedical concentration. Therefore, the undergraduate portion of the program would include a minimum of 85 credits, including the general education requirements and the following:

Code	Title	Credits
BIO 105	General Biology	4
BIO 312 & BIO 313	Human Anatomy and Physiology I and Human Anatomy and Physiology II	8
CHM 103	General Chemistry I	5
CHM 104	General Chemistry II	5
MTH 207	Calculus I	5
MTH 208	Calculus II	4
MTH 310	Calculus III: Multivariable Calculus	4
PHY 203	General Physics I ¹	4
or PHY 103	Fundamental Physics I	
PHY 204	General Physics II ¹	4
or PHY 104	Fundamental Physics II	
PHY 305	General Physics III	3
PHY 306	Modern Physics	3
PHY 311	Experimental Physics	2
PHY 334	Electrical Circuits	3
STAT 145	Elementary Statistics	4
or STAT 245	Probability and Statistics	
Select three credits of psychology		3
Select three credits of sociology		3

¹ PHY 203 and PHY 204 preferred.

Additional course work taken in the physical therapy program may count toward electives needed for the undergraduate physics degree. Be sure to consult the physics department dual degree advisor for details regarding this program.

Degree requirements

All students must complete the general education, college core, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- College core (p. 547)
- Baccalaureate degree requirements (p. 547)
- Doctor of Physical Therapy requirements (<http://catalog.uwlax.edu/graduate/programrequirements/physicaltherapy/dpt/>)

College of Science and Health (CSH) Bachelor of Science core requirements

B.S. and B.A. students graduating from the College of Science and Health are required to take two natural laboratory science courses selected from the general education laboratory science category (GE 05) and/or from BIO 203, BIO 304, BIO 210, CHM 104, ESC 221, ESC 222, PHY 104 or PHY 204, and they either must take two mathematics courses or one math course and one computer science course from the math/logical systems category of the general education requirements (GE 02). One of the two science courses must be from a department outside of the student's major department.

Note: Math courses can be pairs, i.e. 150 and 151; MTH/CS majors can use two science courses from same department.

For the Bachelor of Science degree, in addition to all other College of Science and Health core requirements, students from non-exempted programs¹ must complete one of the following options. It is recommended that courses are selected in consultation with students' academic advisor.

1. Complete a second major; or
2. Complete a minor outside the major; or
3. Complete an individualized option, consisting of 18 credits
 - a. At least 12 credits must be earned at the 300/400 level outside the major department.
 - b. The remaining six credits should come from
 - i. 100 level or higher courses outside the major (General education courses may apply provided they are not being used to fulfill minimum general education requirements.); or
 - ii. 300/400 level courses inside major not being used to fulfill major requirements.
 - c. Internship credits may not count toward the individualized option.

¹ The list of exempted CSH programs is below.

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course

and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

General Science for Teachers Minor

Minor requirements

(Open to students in the following majors: Early Childhood Education (birth-grade 3), Elementary/Middle Education (grades K-9), Elementary/Middle Education (grades K-9) & French Education (grades K-12), Elementary/Middle Education (grades K-9) & Spanish Education (grades K-12), Elementary/Middle Education (grades K-9) & Special Education

(grades K-12), Elementary/Middle Education (grades K-9) & TESOL (grades K-12))

Completion of the general science for teachers minor does not lead to endorsement for a Wisconsin teaching license. Rather, the minor is intended to expand content knowledge and skills in elementary and middle-grade science.

Code	Title	Credits
Required courses		
BIO 100 or BIO 105 or MIC 100 or ECE 335	Biology for the Informed Citizen General Biology Microbes and Society Learning with Nature	3-4
ESC 101	Earth Environments	4
GEO 200	Conservation of Global Environments	3

MTH 207	Calculus I	5
MTH 208	Calculus II	4
Total Credits		9

¹ Depending on the astronomy core courses taken, additional credits may be required to reach a minimum of 23 credits for the minor.

² Only if not taken as part of the astronomy core.

³ A maximum of two credits of PHY 497 may apply.

Physics and Astronomy Honors Program

Program

- Admission
 - Junior standing
 - 15 credits in physics including one 300 level course
 - 3.25 cumulative grade point average in physics courses and a 3.00 cumulative grade point average overall
 - Students must submit an application to the department chair that should include
 - The student's academic transcript
 - The student's reasons for wishing to participate
 - The signatures of two faculty members in physics endorsing the application
- Program
 - Completion of a major program in physics (which may also include an emphasis or concentration)
 - PHY 497 Physics and Astronomy Seminar (1 cr.)
 - PHY 498 Physics and Astronomy Research (1-3 cr.) , three credits
- Evaluation
 - A cumulative 3.50 grade point average in physics at the time of graduation and a 3.00 cumulative grade point average overall
 - Distinguished performance on a project in a relevant research area developed in PHY 498
 - Presentation of the project developed in PHY 498 to a seminar of faculty and students
- Recognition
 - Honors certificate

Public Health and Community Health Education (HED/CHE/PH/HWM/SHE)

College of Science and Health
Department Chair: Keely Rees
 416 Wimberly Hall; 608.785.8168
 Email: krees@uwlax.edu

www.uwlax.edu/public-health-and-community-health-education/
 (<https://www.uwlax.edu/public-health-and-community-health-education/>)

Public health and community health education is a social science which draws from the biological, environmental, psychological, physical and medical sciences to promote health and prevent disease, disability and premature death by educating individuals and communities to voluntarily change their behaviors to improve their health and well-being. The purpose of public health and community health education is to positively influence the health behavior of individuals and communities as well as the living and working conditions that influence their health. The PH-CHE undergraduate curriculum exposes students to concepts and experiences necessary for success in the workplace.

Students graduating with our public health and community health education degree are able to communicate public health information in oral and written forms through a variety of media formats to diverse audiences. Upon completion of the PH-CHE program students are

able to advocate for protection and promotion of the public's health; to use critical thinking and make ethical decisions as related to self, society and professionalism; and to effectively perform research both individually and through teamwork activities. PH-CHE students have several opportunities to integrate, synthesize and apply the knowledge acquired through the PH-CHE program through cumulative experiential activities with the applied work experience of the preceptorship field experience during their last semester.

To pursue a profession in the field of public health and community health education, there are specific skills and competencies which constitute the term 'health education specialist'. The 'Eight Areas of Responsibility' are identified by the Council on Education for Public Health (<https://ceph.org/>), (CEPH) an independent agency recognized by the U.S. Department of Education to accredit schools of public health and public health programs.

"The Eight Areas of Responsibility contain a comprehensive set of Competencies and Sub-competencies defining the role of the health education specialist. These Responsibilities were verified by the 2020 Health Education Specialist Practice Analysis II (HESPA II 2020) project and serve as the basis of the CHES® and MCHES® exam beginning 2022."

Area I: Assessment of Needs and Capacity

Area II: Planning

Area III: Implementation

Area IV: Evaluation and Research

Area V: Advocacy

Area VI: Communication

Area VII: Leadership and Management

Area VIII: Ethics and Professionalism

These core responsibilities, competencies and sub-competencies provide a comprehensive description of the profession and illustrate the knowledge and skills necessary to perform the daily tasks of a 'health education specialist'. The BS-PHCHE program at the University of Wisconsin La Crosse is the only one of its kind in the University of Wisconsin System with national accreditation through CEPH.

Admission requirements for public health and community health education majors (p. 551)

Public Health and Community Health Education admission to program policy

1. Students transferring into the Public Health and Community Health Education Program must have a cumulative GPA of 2.25 or higher at the time of transfer.
2. Students must follow the course sequences set up by the department.
3. Students must attain an overall 2.25 grade point average including all 100/200-level required courses before being admitted to the 300-level courses in health education.
4. Students must earn a grade of "C" or better in all required health education courses and the following courses:

Code	Title	Credits
BIO 100 or BIO 105	Biology for the Informed Citizen General Biology	4

HPR 105	Creating A Healthy, Active Lifestyle	3
MIC 130 or MIC 100	Global Impact of Infectious Disease Microbes and Society	3
STAT 145	Elementary Statistics	4
PSY 100 or SOC 110	General Psychology Introduction to Sociology	3
Select one of the following:		6-8
ESS 205 & ESS 206	Human Anatomy and Physiology for Exercise Science I and Human Anatomy and Physiology for Exercise Science II	
BIO 312 & BIO 313	Human Anatomy and Physiology I and Human Anatomy and Physiology II	

General education writing emphasis

This department incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete a major in this department will fulfill the general education writing emphasis requirement (p. 66).

2022-23 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

Majors

- Public health and community health education - BS (p. 551)

Public Health and Community Health Education Major - Bachelor of Science (BS)

Public health education is the development of individual, group, institutional, community and systemic strategies to improve health knowledge, attitudes, skills and behavior. The purpose of public health education is to positively influence the health behavior of individuals and communities as well as the living and working conditions that influence their health.

Public health education improves the health status of individuals, families, communities, states, and the nation. Public health education enhances the quality of life for all people and reduces premature deaths. By focusing on prevention, public health education reduces the costs (both financial and human) individuals, employers, families, insurance companies, medical facilities, communities, the state and the nation would spend on medical treatment.

Students graduating with our public health and community health education degree have a strong foundation in public health and are skilled in the competencies identified by the Council on Education for Public Health (<https://ceph.org/>) (CEPH), an independent agency recognized by the U.S. Department of Education, to accredit schools of public health and public health programs. The BS-PHCE program at the University of Wisconsin La Crosse is the only one of its kind in the University of Wisconsin System with national accreditation through CEPH. The program, which was initially accredited thru CEPH in May 1992, was recently reaccredited thru CEPH until July 2027.

The Public Health and Community Health Education Program prepares students for careers in county and state public health departments, private health agencies, hospitals, health clinics, community organizations, non-profit agencies, and with governmental agencies. Courses develop skills and knowledge in public health and administrative, program planning, implementation and evaluation, epidemiology, environmental health, national and global health issues, grant seeking, mental and emotional health, drug and alcohol, nutrition education, and theories of health behavior.

www.uwlax.edu/public-health-and-community-health-education/
(<https://www.uwlax.edu/public-health-and-community-health-education/>)

Major requirements

Admission to program

1. **Public health and community health education** students must submit an application for program admission and for enrolling in the public health/community health education course sequence. Prior to applying, the following courses must be completed with a grade of "C" or better (see below).
2. A UWL cumulative GPA of 2.25 or better is required in order to be considered for admission to the public health and community health education major.
3. **Public health and community health education students** must meet the following additional requirements for admission to the public health and community health education preceptorship (PH 498): apply for and receive the recommendation of the public health and community health education faculty; achieve a minimum 2.75 major GPA; successfully complete all required course work.

Code	Title	Credits
Pre-admission, interdisciplinary courses		
BIO 100 or BIO 105	Biology for the Informed Citizen General Biology	4
Select one of the following:		6-8
ESS 205 & ESS 206	Human Anatomy and Physiology for Exercise Science I and Human Anatomy and Physiology for Exercise Science II (Not open for credit to students who have credit in BIO 312.)	
BIO 312 & BIO 313	Human Anatomy and Physiology I and Human Anatomy and Physiology II	
HED 210	Foundations of Health Education	3
HPR 105 or HP 105	Creating A Healthy, Active Lifestyle Analysis of Health, Wellness and Disease for the Health Care Consumer	3
or HED 207	Youth Health Issues	
MIC 100 or MIC 130	Microbes and Society Global Impact of Infectious Disease	3-4
PH 200	Public Health for the Educated Citizen	3
PH 204	Introduction to Global Health	3
STAT 145	Elementary Statistics	4
One social behavioral science course:		3
ANT 101	Human Nature/Human Culture	
ERS 100	Introduction to Ethnic and Racial Studies	
PHL 100	Introduction to Philosophy	
POL 101	American National Government	
POL 102	State and Local Government	
PSY 100	General Psychology	
RGS 100	Race, Gender, Sexuality, and Class	
SOC 110	Introduction to Sociology	
SOC 120	Social Problems	
Total Credits		32-35

Curriculum

(College of Science and Health)

57 Credits (87-90 credits, including interdisciplinary, pre-admission requirements)

Code	Title	Credits
Core courses (57 credits)		
CHE 360	Methods and Strategies for Health Education	3
CHE 370	Motivational Interviewing for Health Educators	3

Total Credits		57

Degree requirements

All students must complete the general education, college core (waived for public health and community health education majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 552)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/regISTRATION/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

Year 1			
Fall	Credits	Spring	Credits

		14	15

Total Credits: 120

¹ See the PHCHE admission policy for the admission requirements for this major.

² MIC 130 will fulfill the Gen Ed Global Studies requirement. MIC 100 is also an option and will fulfill the Gen Ed Science requirement. If MIC 130 is taken, another Gen Ed Science course is needed.

³ One social behavioral science course is required for admission. Many of the course options will fulfil the Gen Ed Self & Society category as well. For a list of courses, refer to the PHCHE admission policy.

⁴ Health content courses include: HED 345, HED 409 (one credit course), HED 425, HED 469 (Spring semester only), HED 472, HED 473, and HED 474.

⁵ Student should work with faculty advisor to determine an appropriate preceptorship site.

Radiologic Science Program (DMS/RT/RAD)

College of Science and Health
Department of Health Professions
Program Director: Melissa Weege
4031 Health Science Center, 608.785.8470
Email: radsci@uwlax.edu

www.uwlax.edu/health-professions/undergraduate-majorsminors/radiation-therapy (<https://www.uwlax.edu/health-professions/undergraduate-majorsminors/radiation-therapy/>)

www.uwlax.edu/health-professions/undergraduate-majorsminors/radiologic-technology/ (<https://www.uwlax.edu/health-professions/undergraduate-majorsminors/radiologic-technology/>)

Radiologic science: radiation therapy emphasis

The mission of the Radiation Therapy Program at UWL is to educate and train radiation therapists who are knowledgeable, technically competent, and dedicated to their profession and their patients, while meeting the educational and personal needs of its students by emphasizing excellence in education and offering a broad-based curriculum in liberal studies, professional courses and clinical internship. This program additionally seeks to promote research and provide a base for further professional development of graduates.

Radiation therapists are health care professionals skilled in the art and science of medical radiation treatment delivery. The majority of patients receiving radiation therapy have cancer. Along with surgery and chemotherapy, radiation therapy offers these patients the best chance to succeed in the fight against their disease. The major focus areas of the profession are the care and assessment of patients, simulation, planning and delivery of treatments utilizing linear accelerator produced radiation and radio-isotopes. Aims of care include cure, relief of symptoms, and improvement of patients' quality of life. High technology equipment and innovative treatment methods are utilized to maximize treatment effectiveness. Radiation therapists must have excellent technical skills, but must also be empathetic and effective communicators. Much satisfaction is gained from close patient interaction and the specialty's team approach with radiation oncologists, physicists, nurses and other medical specialists. Radiation therapy is "technology with a human touch."

The **major in radiologic science: radiation therapy emphasis** provides students with an educational foundation in the sciences and humanities as well as clinical experience in a radiation therapy department. The curriculum requires six semesters on campus in pre-professional and professional core courses prior to the senior clinical internship. The clinical internship begins in July of the senior year, extends for 13 months, and is spent at an affiliated clinical internship site. When students have met all requirements of the major and the university, they are eligible for graduation and to apply to take the national certification exam.

UWL, in cooperation with its clinical internship sites, currently provides the only training and baccalaureate degree program in radiation therapy in the State of Wisconsin. The radiologic science: radiation therapy emphasis at UWL is designed to offer a high quality radiation therapy curriculum rich in academic and clinical experiences. During the clinical internship, students will work directly with registered radiation therapists in direct patient care in busy and highly regarded radiation oncology departments. The program also seeks to foster, in its students, the professional development, problem solving and leadership skills needed for current and future health care environments.

Radiologic science: radiologic technology emphasis

Radiologic technology is a health professions specialty employing the use of ionizing radiation for diagnostic purposes. Radiologic technologists work with physicians, nurses, and other healthcare practitioners to assist in diagnosing patients with a variety of health

conditions. The **radiologic science major: radiologic technology emphasis** provides students with a substantial educational foundation in the sciences and clinical applications in a hospital setting so that graduates may function as technologists.

The pre-professional and professional program collectively requires four to six semesters on campus to earn a minimum of 52 credits, including certain prescribed courses, followed by a 24-month internship at an affiliated internship site. Upon the successful completion of a clinical internship experience, students earn a Bachelor of Science degree in radiologic science with a radiologic technology emphasis and are eligible to take the national boards to become a radiologic technologist.

Radiologic science: diagnostic medical sonography emphasis

Diagnostic medical sonography uses ultrasound, or high-frequency sound waves, to identify and diagnose diseases in body organs and tissues. The diagnostic medical sonographer is a health care professional who performs diagnostic ultrasound examinations under a physician's supervision. To perform imaging on patients in the clinical setting, sonographers are required to integrate medical knowledge of anatomy and physiology, pathology and ultrasound physics. Among the parts of the body most commonly viewed through ultrasound are the heart and blood vessels, abdominal organs, pelvic organs and pregnant uterus. Qualified diagnostic medical sonographers are needed in hospitals, clinics, physicians' offices, medical laboratories, industry and public health. Teachers, managers and researchers in diagnostic ultrasound are also in demand.

The **radiologic science major: diagnostic medical sonography emphasis** has two tracks: the **echocardiography/vascular** track and the **general/vascular** track. Students in either track will complete their pre-professional and professional core courses (52 credits) on the UWL campus and then complete their degree at an internship in diagnostic medical sonography for two years on the UW Health campus (72 credits).

Majors

- Radiologic science major: diagnostic medical sonography with general/vascular emphasis - BS (p. 556)
- Radiologic science major: radiation therapy emphasis - BS (p. 559)
- Radiologic science major: radiologic technology emphasis - BS (p. 561)

Radiologic Science Major: Diagnostic Medical Sonography with Echocardiography/Vascular Emphasis - BS

Major requirements

Admission

Admission to the program is on a competitive basis. The number of students admitted to the major is dependent on the number of clinical internship sites and their student capacity. Diagnostic medical sonography class sizes are approximately eight. Applications

are available on each school of diagnostic medical sonography website (linked below) or on UWL's Diagnostic Medical Sonography Program (<https://www.uwlax.edu/health-professions/undergraduate-majorsminors/>) website.

1. Students are advised to apply for admission to the professional program early in the late fall prior to desired admission, after having taken or registered for all general education and pre-professional requirements.
2. Applicants are required to have a minimum cumulative grade point average of 3.0 on a 4.0 scale and a grade of "C" or higher in all general education and pre-professional courses. Applicants are required to have a minimum pre-professional grade point average of 3.0 on a 4.0 scale.
3. Students must have a recent set of immunizations prior to admission to comply with hospital policy.
4. Applicants are considered without regard to sex, race, color, creed, religion, national origin, disability, ancestry, age, sexual orientation, pregnancy, marital status, or parental status.
5. Students for whom English is a second language must earn a minimum score of 600 (paper-based), 250 (computer-based), or 100 (Internet-based) on the Test of English as a Foreign Language (TOEFL) or a score of 6.5 on the International English Language Testing System (IELTS) exam within two years prior to application to the program.
6. Students will need to have their current CNA with 100 hours of documented patient care experience.
7. Students must have current CPR certification in adult, child and infant through the AHA.
8. Students must have completed eight hours of job shadowing in ultrasound.
9. Applications must be submitted in full by mid-December deadline to the school of diagnostic medical sonography.

Selection Process

The university sponsors up to eight clinical interns each year. The size of the program is limited by these internships. Students must make formal application to the program during the fall semester. Refer to the sample degree plan tab.

The school of diagnostic medical sonography maintains a selection committee composed of representatives from the university, healthcare community, and the clinical affiliates. The committee evaluates each application on the basis of the applicant's past academic performance (a minimum cumulative GPA of 3.0 is required for admission into the professional program), their references, their past work experience, and the results of a formal interview. Based on these factors, the applicants are ranked and accepted for entry into the professional program.

Acceptance is effective at the beginning of the fourth year and conditional upon successful completion of courses in progress at the time of notification of acceptance. Selection is also conditional upon students' compliance with state laws for caregivers including submission to a criminal background check. Students take the professional core courses in La Crosse.

Students who successfully meet program requirements in the professional core courses will interview with the clinical internship sites and upon selection by one of the sites will be placed for the clinical internship.

Diagnostic medical sonography program affiliated clinical internship sites:

- University of Wisconsin Hospital, Madison, WI (<https://careers.uwhealth.org/diagnostic-sonography-ultrasound-school/>)

Curriculum

(124 total credits, including internship)

Retention of good standing in the program requires students maintain a grade of "C" or higher in all required courses, as well as a semester and cumulative grade point average of 3.0 on a 4.0 scale.

- ¹ This course will also fulfill general education requirements.
- ² Students whose math placement exam places them in MTH 151 or higher are not required to take MTH 150, but are required to take STAT 145 and meet minimum requirements of the General Education: Mathematical/Logical Systems and Modern Languages Category.

Degree requirements

All students must complete the general education, college core (waived for radiologic science majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 555)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

- ¹ This course will also fulfill general education requirements.
- ² Students whose math placement exam places them in MTH 151 or higher are not required to take MTH 150, but are required to take STAT 145 and meet minimum requirements of the General Education: Mathematical/Logical Systems and Modern Languages Category.

Degree requirements

All students must complete the general education, college core (waived for radiologic science majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 558)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

Radiologic Science Major: Radiation Therapy Emphasis - Bachelor of Science (BS)

Major requirements

(College of Science and Health)

Admission

Admission to the program is on a competitive basis. The number of students admitted to the major is dependent on the number of clinical internship sites and their student capacity. Class sizes are approximately 20. Admission to the major is on a competitive basis. Applications are available at the Department of Health Professions office or on the Radiation Therapy Program (<https://www.uwlax.edu/>)

health-professions/undergraduate-majors/minors/radiation-therapy/)’s website.

1. Students are advised to apply for admission to the professional program early in the late fall prior to desired admission, after having taken or registered for all general education and pre-professional requirements. Deadline is mid-December.
2. Applicants are required to have a minimum cumulative grade point average of 2.75 on a 4.0 scale and a grade of "C" or higher in all general education and pre-professional courses. Applicants are required to have a minimum pre-professional grade point average of 2.75 on a 4.0 scale.
3. Applicants are required to successfully complete 32 hours of observation in a radiation therapy department. Students are encouraged to plan to visit during summer, spring break or between semesters. Some sites may require that the student have had a set of immunizations prior to the visit to comply with hospital policy.
4. Applicants are considered without regard to sex, race, color, creed, religion, national origin, disability, ancestry, age, sexual orientation, pregnancy, marital status, or parental status.
5. Students for whom English is a second language must earn a minimum score of 600 (paper-based), 250 (computer-based), or 100 (internet-based) on the Test of English as a Foreign Language (TOEFL) or a score of 6.5 on the International English Language Testing System (IELTS) exam within two years prior to application to the program.
6. Applications must be submitted in full by mid-December deadline to the Department of Health Professions office.

Selection process

A selection committee will be appointed to review all completed applications, interview all qualified candidates and make selection decisions. The committee carefully considers each applicant, looking at academic performance, personal characteristics, and experiences that predict success in the field.

Acceptance is effective at the beginning of the junior year conditional upon successful completion of courses in progress at the time of notification of acceptance. Selection is also conditional upon students’ compliance with state laws for caregivers including submission to a criminal background check. Students take the professional core courses in La Crosse.

Students who successfully meet program requirements in the professional core courses will interview with the clinical internship sites and upon selection by one of the sites will be placed for the clinical internship. While student preferences in internship site are taken into account, students cannot be guaranteed that they will be assigned in accordance with their choices of clinical site.

Radiation therapy affiliated clinical internship sites:

- Advocate-Aurora Lutheran General Hospital, Park Ridge, IL
- Ascension-Columbia St. Mary’s Hospital, Milwaukee, WI
- Aspirus Regional Cancer Center, Wausau, WI
- Froedtert Hospital and the Medical College of Wisconsin, Milwaukee, WI
- Gundersen Health System, La Crosse, WI
- Marshfield Clinic, Marshfield, WI
- University of Wisconsin Hospital and Clinics, Madison, WI

Writing in the major

This major incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete this major will fulfill the general education writing emphasis requirement (p. 66).

Curriculum

(111 total credits including internship)

Retention of good standing in the program requires that students maintain a grade of "C" or higher in all required courses, as well as a semester and cumulative grade point average of 2.75 on a 4.0 scale.

- ¹ This course will also fulfill general education requirements.
- ² Students whose math placement exam places them in MTH 207 are not required to take MTH 151, but are required to take STAT 145 and meet minimum requirements of the General Education: Mathematical/Logical Systems and Modern Languages Category.

Degree requirements

All students must complete the general education, college core (waived for radiologic science majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 560)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.

6. Complete major and minor requirements with at least a 2.00 GPA¹,² in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

Radiologic Science Major: Radiologic Technology Emphasis - Bachelor of Science (BS)

Major requirements

(College of Science and Health)

Admission

Admission to the program is on a competitive basis. The number of students admitted to the major is dependent on the number of clinical internship sites and their student capacity. Class sizes are approximately eight. Applications are available on each school of radiologic technology websites (linked below) or on UWL's Radiologic

Technology Program (<https://www.uwlax.edu/health-professions/undergraduate-majorsminors/radiologic-technology/>) website.

1. Students are advised to apply for admission to the professional program early in the late fall prior to desired admission, after having taken or registered for all general education and pre-professional requirements.
2. Applicants are required to have a minimum cumulative grade point average of 2.5 on a 4.0 scale and a grade of "C" or higher in all general education and pre-professional courses. Applicants are required to have a minimum pre-professional grade point average of 2.5 on a 4.0 scale.
3. Students must have a recent set of immunizations prior to admission to comply with hospital policy.
4. Applicants are considered without regard to sex, race, color, creed, religion, national origin, disability, ancestry, age, sexual orientation, pregnancy, marital status, or parental status.
5. Students for whom English is a second language must earn a minimum score of 600 (paper-based), 250 (computer-based), or 100 (internet-based) on the Test of English as a Foreign Language (TOEFL) or a score of 6.5 on the International English Language Testing System (IELTS) exam within two years prior to application to the program.
6. Applications must be submitted in full by mid-December deadline to the school of radiologic technology.

Selection process

The university sponsors up to eight clinical interns each year. The size of the program is limited by these internships. Students must make formal application to the program during the fall semester to meet the mid-December deadline. Refer to the sample degree plan tab. The school of radiologic technology the student applies to maintains a selection committee composed of representatives from the university, healthcare community, and the clinical affiliates. The committee evaluates each application on the basis of the applicant's past academic performance (a minimum cumulative GPA of 2.50 is required for admission into the professional program), their references, their past work experience, and the results of a formal interview. Based on these factors, the applicants are ranked and accepted for entry into the professional program.

Acceptance is effective at the beginning of the fourth year and conditional upon successful completion of courses in progress at the time of notification of acceptance. Selection is also conditional upon students' compliance with state laws for caregivers including submission to a criminal background check. Students take the professional core courses in La Crosse.

Students who successfully meet program requirements in the professional core courses will interview with the clinical internship sites and upon selection by one of the sites will be placed for the clinical internship. While student preferences in internship site are taken into account, students cannot be guaranteed that they will be assigned in accordance with their choices of clinical site.

Radiologic technology affiliated clinical internship sites:

- University of Wisconsin Hospital, Madison, WI (<https://careers.uwhealth.org/radiologic-technology-school/>)
- Marshfield Clinic, Marshfield, WI (<https://www.marshfieldclinic.org/education/marshfield-clinic-school-of-radiography/>)

Curriculum

(118 total credits, including internship)

Retention of good standing in the program requires students maintain a grade of "C" or higher in all required courses, as well as a semester and cumulative grade point average of 2.5 on a 4.0 scale.

¹ This course will also fulfill general education requirements.

² Students whose math placement exam places them in MTH 151 or higher are not required to take MTH 150, but are required to take STAT 145 and meet minimum requirements of the General Education: Mathematical/Logical Systems and Modern Languages Category.

Degree requirements

All students must complete the general education, college core (waived for radiologic science majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 563)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

¹ Students whose math placement exam places them in MTH 151 or higher are not required to take MTH 150, but are required to take STAT 145 and meet minimum requirements of the General Education: Mathematical/Logical Systems and Modern Languages Category.

Recreation Management and Therapeutic Recreation Department (REC/RTH/MIND)

College of Science and Health
 Department Chair: Laurie Harmon
 2044 Health Science Center; 608.785.8213
 Email: lharmon@uwlax.edu

www.uwlax.edu/rec-management-and-therapeutic-rec (<http://www.uwlax.edu/rec-management-and-therapeutic-rec/>)

Recreation Management Program (REC)

The Recreation Management Program at UW-La Crosse is the only nationally accredited recreation management program in the University

of Wisconsin System. The mission of the program is to train students in the skills of the recreation profession and instill an appreciation of the vital role of leisure in people's lives. An experiential approach to our teaching makes students uniquely competitive in the recreation job market and provides an excellent transition into the recreation profession.

The program serves students interested in a wide range of professional recreation careers. Four emphasis areas (tourism and event management, community-based recreation, outdoor recreation, and generalist) provide the opportunity to create a personalized program of study. Graduates of the recreation management program find employment in government agencies, YMCAs, Boys and Girls Clubs, camps, environmental education, military bases, tourism enterprises including resorts, and other for-profit recreation organizations ranging from retail operations to direct service providers.

Therapeutic Recreation Program (RTH)

The Therapeutic Recreation Program at UW-La Crosse prepares majors eligible to become Certified Therapeutic Recreation Specialists (CTRS) who improve functioning, facilitate leisure education, and promote inclusive recreation participation for people of all abilities and their families and caregivers. We advocate a strengths-approach to helping people reach dreams and goals for healthy functioning, well-being, and satisfying leisure. This health and human service profession is designated as "recreational therapy" in the *Bureau of Labor Statistics Occupational Outlook Handbook*.

Students learn to assess, plan, implement, evaluate, and document therapeutic recreation programs using recreation interventions such as physical activity, expressive arts, horticulture, games, music, animal-assisted therapy, nature-based activities, adventure, stress management, and play. These goal-directed programs help vulnerable individuals and groups with disabling conditions, and acute and chronic health conditions to learn, adapt, and grow through engaging in meaningful recreation and leisure pursuits.

Recreation programs transfer policy

Students transferring into recreation management programs must have a cumulative GPA of 2.00 or higher at the time of transfer. Students transferring into therapeutic recreation must have a cumulative GPA of 2.50 or higher at the time of transfer.

General education writing emphasis

This department incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete a major in this department will fulfill the general education writing emphasis requirement (p. 66).

2022-23 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

Professor

Laurie Harmon, Ph.D., Department Chair

Associate Professor

Kate Evans, Ph.D.

Brian Kumm-Schaley, Ph.D.

Dan Plunkett, Ph.D.

Assistant Professor

Namyun Kil, Ph.D.

W. Thomas Means, Ph.D.

Jennifer Taylor, Ph.D.

Associate Teaching Professor

Tara DeLong, M.S.

Lisa Savarese, M.S.

Assistant Teaching Professor

Lindsey Kirschbaum, M.S.

Lecturer

Jon Evans, M.S.

Administrative Support

Janet Craig

Majors

- Recreation management major: community-based recreation emphasis - BS (p. 565)
- Recreation management major: generalist emphasis - BS (p. 567)
- Recreation management major: outdoor recreation emphasis - BS (p. 569)
- Recreation management major: tourism and event management emphasis - BS (p. 571)
- Therapeutic recreation major - BS (p. 573)

Dual degree programs

- Dual degree in recreation management: community-based recreation BS and recreation management MS (p. 575)
- Dual degree in recreation management: generalist BS and recreation management MS (p. 578)
- Dual degree in recreation management: outdoor recreation BS and recreation management MS (p. 580)
- Dual degree in recreation management: tourism and event management BS and recreation management MS (p. 583)
- Dual degree in therapeutic recreation BS and MS (p. 586)

Minors

- Inclusive recreation minor (p. 588)
 - Recreation management minor (p. 589)
 - Recreation management minor for therapeutic recreation majors (p. 589)
 - Tourism and event management minor (p. 589)
-

Recreation Management Major: Community-Based Recreation Emphasis - Bachelor of Science (BS)

The community-based recreation emphasis prepares students for professional roles in programming and management in a wide variety of recreation related fields in the public and non-profit sectors such as municipal parks and recreation departments, state agencies, youth serving agencies, religious-affiliated agencies, social service agencies, and campus recreation. Community recreation students will choose from courses in programming, budgeting, youth development, management, aquatics, and facility management.

Potential careers:

- Camp Administrator
- Community Recreation Supervisor
- Fitness & Aquatics Director
- Golf Course Manager
- Recreation/Sport Facility Manager
- Military Recreation Programmer
- Park & Recreation Planner
- University Recreational Sports Director
- Youth Sports Program Director

Major requirements

(College of Science and Health)

55-56 credits (68-69 total credits including interdisciplinary requirements)

Code	Title	Credits

REC 340	Evaluation Methods and Practices	3
REC 351	Civic Engagement in the Recreation Profession	3
REC 390	Principles of Management in Recreation	3
REC 400	Planning for Park and Recreation Facilities	3
REC 402	Risk Management in Leisure Service Organizations	3
REC 440	Professional Wellness in Contemporary Leisure Services	1
REC 449	Internship/Professional Preparation ¹	1
REC 450	Internship	12
Total Credits		44

Code	Title	Credits
Interdisciplinary requirements		
ECO 110	Microeconomics and Public Policy	3
ENG 307	Writing for Management, Public Relations and the Professions	3

MKT 309	Principles of Marketing	3
STAT 145	Elementary Statistics	4
Total Credits		13

¹ Enrollment in REC 449 requires completion or concurrent enrollment in all REC and interdisciplinary courses, except REC 450.

Community-based recreation emphasis

Code	Title	Credits
REC 404	Budgeting in the Recreation Enterprise	3
Three additional courses from the following:		8-9
REC 215	Introduction to Community Recreation	
REC 304	Maintenance of Recreation Facilities	
REC 305	Operation and Management of Swimming Pools and Spas	
REC 310	Youth Development in the Recreation Profession	
REC 415	Camp Administration	
Total Credits		11-12

Other Requirements

1. Students must have a minimum GPA of 2.00 or greater to enter the program.
2. Prior to enrollment in REC 449 Internship/Professional Preparation (1 cr.), majors must complete two 50-hour professional experiences. These are non-class field experiences at recreation management agencies.
3. Before enrolling in REC 450, all required REC courses must be completed with a grade of "C" or better; and the student must have a cumulative UWL GPA of at least 2.50.
4. In order to graduate, students must have a "C" or better in REC 450.
5. Students may only complete one emphasis area. Declare the major with emphasis choice in the College of Science and Health Academic Services Office, 105 Graff Main Hall.

Degree requirements

All students must complete the general education, college core (waived for recreation management majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 566)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)

4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

¹ Select three of the following courses to satisfy the Community Recreation Emphasis Elective:

- REC 215 Introduction to Community Recreation
- REC 304 Maintenance of Recreation Facilities
- REC 305 Operation and Management of Swimming Pools and Spas
- REC 310 Youth Development in the Recreation Profession
- REC 415 Camp Administration

Recreation Management Major: Generalist Emphasis - Bachelor of Science (BS)

As the name suggests, the recreation management (RM) generalist emphasis allows students to explore all areas of recreation. Students in the generalist emphasis take the recreation management core curriculum and an additional nine credits selected from the other three emphasis areas.

Students in the generalist emphasis may want to minor in a recreation-related area such as biology, communications, business, or environmental studies. Depending on which minor is paired with the recreation management generalist major, students will be ready to pursue a variety of careers such as:

- Outdoor Educator (RM generalist with a minor in biology)
- Experiential Education and Group Facilitation Specialist (RM generalist with a minor in communications)
- Recreation Related Business Manager (RM generalist with a minor in business administration)
- Environmental/Recreation Policy Advocate (RM generalist with a minor in environmental studies)

Recreation Management Major: Outdoor Recreation Emphasis - Bachelor of Science (BS)

The outdoor recreation emphasis is for students who want to work in natural resource-based recreation settings. This program helps students develop skills in outdoor programming and leadership, environmental education, outdoor guiding and adventure, and nature-based recreation management. Students will develop these skills by completing coursework in outdoor education techniques, experiential learning, and nature-based resource management.

Potential careers:

- Conservation Lobbyist/Advocate
- Eco-tour Guide
- Forest/Park Ranger
- Naturalist/Environmental Educator
- Outdoor Adventure Educator
- Outdoor Center Program Director
- Outdoor Programmer
- Outdoor Trip Guide (NOLS, Outward Bound, Wilderness Inquiry)
- Visitor Services
- Wilderness Instructor

All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 570)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

- Fulfill the general education requirements.
- Complete at least one ethnic studies (diversity) course.
- Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)

- Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
- At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
- Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
- A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
- Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

- ¹ Select three of the following courses to satisfy the Outdoor Recreation Emphasis Elective:
- REC 201 Introduction to Outdoor Leadership
 - REC 204 Introduction to Outdoor Education
 - REC 330 Recreation Resource Management
 - REC 335 Environmental Education
 - REC 345 Ecotourism
 - REC 415 Camp Administration

Recreation Management Major: Tourism and Event Management Emphasis - Bachelor of Science (BS)

The tourism and event management emphasis is for students interested in creating and managing visitor experiences. Whether it is managing a resort, promoting a destination, leading adventure tours, or planning events, a career in tourism is about helping others enjoy their travel and event experience as much as you enjoy your own. Students pursuing a tourism and event management emphasis will gain an understanding of visitor motivations and behaviors, destination marketing and development, event coordination, and sustainable tourism practices.

Potential careers:

- Event Facility Sales & Event Manager
- Festival Manager
- Events Coordinator
- Event Planner (e.g., weddings)
- Destination Marketing Director
- Hotel Manager
- Resort General Manager
- Theme Park General Manager
- Cruise Ship Director
- Tour & Travel Guide

Major requirements

(College of Science and Health)

56 credits (69 total credits including interdisciplinary requirements)

Total Credits		13

¹ Enrollment in REC 449 requires completion or concurrent enrollment in all REC and interdisciplinary courses, except REC 450.

Tourism emphasis

Code	Title	Credits
REC 320	Introduction to Tourism	3
REC 420	Revenue Management in Leisure Enterprises	3
REC 445	Meetings, Conventions, and Event Planning	3
One additional course from the following:		3
REC 345	Ecotourism	
REC 405	Sustainable Tourism Development	
Total Credits		12

Other Requirements

- Students must have a minimum GPA of 2.00 or greater to enter the program.
- Prior to enrollment in REC 449 Internship/Professional Preparation (1 cr.), majors must complete two 50-hour professional experiences. These are non-class field experiences at recreation management agencies.
- Before enrolling in REC 450, all required REC courses must be completed with a grade of "C" or better; and the student must have a cumulative UWL GPA of at least 2.50.
- In order to graduate, students must have a "C" or better in REC 450.
- Students may only complete one emphasis area. Declare the major with emphasis choice in the College of Science and Health Academic Services Office, 105 Graff Main Hall.

Degree requirements

All students must complete the general education, college core (waived for recreation management majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)

Therapeutic Recreation Major - Bachelor of Science (BS)

Therapeutic recreation specialists assist persons with disabilities or illnesses to improve their functioning and quality of life. This is achieved through the development of a meaningful leisure lifestyle. Comprehensive therapeutic recreation services include an approach based on the needs, interests, abilities, and strengths of clients. Services are offered on a continuum of care which includes treatment (which incorporates recreation activities to improve functional abilities and assist in diagnosis), leisure education (which focuses on the acquisition of recreation skills that help attain an independent lifestyle), and recreation participation (which uses recreation activities to enhance health and overall quality of life).

Students learn to develop and implement therapeutic programs using recreational activities such as exercise, horticulture, arts and crafts, games, music, reminiscence, pain management, and stress management. These goal-directed programs help individuals and groups with disabling conditions to learn, adapt and grow through leisure participation.

While most colleges and universities offer a recreation major with a concentration in therapeutic recreation, UW-La Crosse is one of the few universities in the nation to offer therapeutic recreation as its own independent major.

Major requirements

Admission to the program

To be considered for admission to the therapeutic recreation major, the student must have a minimum cumulative GPA of 2.0/4.0.

Curriculum

(College of Science and Health)

62 credits, excluding general education credits

Advancement

To be admitted to RTH 498 Internship in Therapeutic Recreation, students must achieve a 2.5 cumulative and major GPA and have successfully completed all program course work with a grade of "C" or better.

Degree requirements

All students must complete the general education, college core (waived for therapeutic recreation majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 574)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.

3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

¹ PSY 212, PSY 204, and ESS 205/BIO 312 fulfill, in part, criteria for becoming a Certified Therapeutic Recreation Specialist (CTRS). For any PSY 212, PSY 204, or ESS 205/BIO 312 course substitutes/transfers, students are advised to verify satisfactory content with the National Council for Therapeutic Recreation Certifications (NCTRC). See the Therapeutic Recreation Program Director for more information.

Students are required to earn a minimum of 120 credits (<http://catalog.uwlax.edu/undergraduate/degreerequirements/#baccalaureate-degree>) for a Bachelor's degree.

Dual Degree Program in Recreation Mgmt: Community-Based Recreation B.S. & Recreation Management M.S.

Total Credits		11-12

Admission to graduate program

When applying to the Recreation Management UWL Graduate Program:

- Applicant must be a current recreation management student and have completed or is concurrently enrolled in REC 301 and STAT 145.
- Students may be accepted into the dual degree program at any time after having completed the required courses. It is suggested that students apply before they have completed 75 undergraduate credit hours. Graduate courses cannot be taken until the student has completed 75 undergraduate credits.
- Student must have and maintain a minimum cumulative undergraduate GPA of 2.85/4.0; and maintain a minimum cumulative graduate GPA of 3.0/4.0
- Undergraduate students who have been accepted into the 4+1 program will be allowed to take the following courses at the 500-level and receive credit towards both the undergraduate and graduate degrees upon the completion of 75 undergraduate credits:

Code	Title	Credits
REC 500	Planning for Park and Recreation Facilities	3
REC 502	Risk Management in Leisure Service Organizations	3
REC 504	Budgeting in the Recreation Enterprise ³	3
or REC 520	Revenue Management in Leisure Enterprises	
Total Credits		9

³ Whether to take REC 504 or REC 520 is determined by the emphasis requirements.

Final admission to the Recreation Management Graduate Program is contingent upon completion of all recreation management undergraduate program requirements.

Internship

REC 450 Internship (12-16 cr.) will be taken as undergraduate credit and fulfills the final requirements of the undergraduate degree. After REC 450 is completed the student will graduate with their Bachelor of Science in recreation management.

Graduate curriculum

Code	Title	Credits

Degree requirements

All students must complete the general education, college core (waived for therapeutic recreation majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 576)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).

7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS ([https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&";](https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&)) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

- ¹ REC 390 must be taken before or concurrently with REC 502.
- ² REC 390 must be taken before or concurrently with REC 504. Both courses are only offered in the Fall.
- ³ **To be considered for admission to the dual degree program, the student must:**
1. Be a current recreation management student who has completed at least 75 undergraduate credits.
 2. Have completed or is concurrently enrolled in REC 301 and STAT 145.
 3. Have a minimum cumulative UWL GPA of 2.85 to apply.

For complete details regarding application procedures, contact the Recreation Management Program Director in the Department of Recreation Management and Therapeutic Recreation.

- ⁴ All undergrad REC major requirements and REC 500, REC 502, and REC 504 should be completed before taking REC 450 the Spring of senior year. Therefore, the application for "special non-degree graduate student" status may be done the Fall of junior year if a graduate-level class such as REC 502 needs to be taken the Spring of junior year. This application cannot be submitted earlier than the Fall of junior year.

Admission to graduate program

When applying to the Recreation Management UWL Graduate Program:

- Applicant must be a current recreation management student and have completed or is concurrently enrolled in REC 301 and STAT 145.
- Students may be accepted into the dual degree program at any time after having completed the required courses. It is suggested that students apply before they have completed 75 undergraduate credit hours. Graduate courses cannot be taken until the student has completed 75 undergraduate credits.
- Student must have and maintain a minimum cumulative undergraduate GPA of 2.85/4.0; and maintain a minimum cumulative graduate GPA of 3.0/4.0
- Undergraduate students who have been accepted into the 4+1 program will be allowed to take the following courses at the 500-level and receive credit towards both the undergraduate and graduate degrees upon the completion of 75 undergraduate credits:

Code	Title	Credits
REC 500	Planning for Park and Recreation Facilities	3
REC 502	Risk Management in Leisure Service Organizations	3
REC 504	Budgeting in the Recreation Enterprise ³	3
or REC 520	Revenue Management in Leisure Enterprises	
Total Credits		9

- ³ Whether to take REC 504 or REC 520 is determined by the emphasis requirements.

Final admission to the Recreation Management Graduate Program is contingent upon completion of all recreation management undergraduate program requirements.

Internship

REC 450 Internship (12-16 cr.) will be taken as undergraduate credit and fulfills the final requirements of the undergraduate degree. After REC 450 is completed the student will graduate with their Bachelor of Science in recreation management.

Degree requirements

All students must complete the general education, college core (waived for therapeutic recreation majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 579)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)

4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=logon&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

Admission to graduate program

When applying to the Recreation Management UWL Graduate Program:

- Applicant must be a current recreation management student and have completed or is concurrently enrolled in REC 301 and STAT 145.
- Students may be accepted into the dual degree program at any time after having completed the required courses. It is suggested that students apply before they have completed 75 undergraduate credit hours. Graduate courses cannot be taken until the student has completed 75 undergraduate credits.

- Student must have and maintain a minimum cumulative undergraduate GPA of 2.85/4.0; and maintain a minimum cumulative graduate GPA of 3.0/4.0
- Undergraduate students who have been accepted into the 4+1 program will be allowed to take the following courses at the 500-level and receive credit towards both the undergraduate and graduate degrees upon the completion of 75 undergraduate credits:

Code	Title	Credits
REC 500	Planning for Park and Recreation Facilities	3
REC 502	Risk Management in Leisure Service Organizations	3
REC 504 or REC 520	Budgeting in the Recreation Enterprise ³ Revenue Management in Leisure Enterprises	3
Total Credits		9

³ Whether to take REC 504 or REC 520 is determined by the emphasis requirements.

Final admission to the Recreation Management Graduate Program is contingent upon completion of all recreation management undergraduate program requirements.

Internship

REC 450 Internship (12-16 cr.) will be taken as undergraduate credit and fulfills the final requirements of the undergraduate degree. After REC 450 is completed the student will graduate with their Bachelor of Science in recreation management.

Degree requirements

All students must complete the general education, college core (waived for therapeutic recreation majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- Baccalaureate degree requirements (p. 584)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

This major is exempt from the CSH College Core requirement.

Total Credits: 141

- REC 390 must be taken before or concurrently with REC 502.
- REC 390 is only offered in the Fall.
- To be considered for admission to the dual degree program, the student must:**
 - Be a current recreation management student who has completed at least 75 undergraduate credits.
 - Have completed or is concurrently enrolled in REC 301 and STAT 145.
 - Have a minimum cumulative UWL GPA of 2.85 to apply.

For complete details regarding application procedures, contact the Recreation Management Program Director in the Department of Recreation Management and Therapeutic Recreation.

- All undergrad REC major requirements and REC 500, REC 502, and REC 520 should be completed before taking REC 450 the Spring of senior year. Therefore, the application for "special non-degree graduate student" status may be done the Fall of junior year if a graduate-level class such as REC 502 needs to be taken the Spring of junior year. This application cannot be submitted earlier than the Fall of junior year.

Dual Degree Program in Therapeutic Recreation B.S. and M.S.

Overview

The field of therapeutic recreation is moving towards a master's level entry (much like physical therapy, occupational therapy, and speech-language pathology recently have). The creation of a dual degree program will provide students with a more efficient path towards completion of their master's degree. This dual degree program will allow students to complete a bachelor's and a master's degree (+1) in less time in the therapeutic recreation program and to be eligible to become a Certified Therapeutic Recreation Specialist™.

Major requirements

Admission to the program

To be considered for admission to the dual degree program, the student must:

1. Be a current therapeutic recreation student who has been accepted into the program and has completed at least 75 undergraduate credits.
2. Have completed or is concurrently taking RTH 252, RTH 319, RTH 329, PSY 204, ESS 205 (or BIO 312).
3. Have a minimum cumulative UWL GPA of 3.2 to apply.

Further selection is based on the following criteria:

- Cumulative UWL GPA
- Pre-professional experience
- 250 word essay explaining why the applicant wants to pursue a degree in therapeutic recreation

Graduation requirements

Bachelor of Science

- All courses required in the Therapeutic Recreation Program during the undergraduate portion of the dual degree program must be passed with a minimum grade of "C" or better with a GPA of 2.5 or better on a scale of 4.0.
- All program and university requirements must be met (120 credits total).

Master of Science

- A total of at least 30 credits of graduate level courses that must be competed with a "B" or better (3.0/4.0) in each course. This includes the courses taken during the undergraduate period: RTH 556, RTH 570, and RTH 576. These credits will count towards both the undergraduate and graduate degrees.
- A cumulative GPA of 3.0/4.0 scale in all graduate courses is required for graduation from graduate school.

Curriculum

RTH 750	Authentic Leadership and Clinical Supervision in Therapeutic Recreation	3
REC 761	Graduate Project in Recreation	3
Elective ³		3
Total Credits		83-84

- ¹ Typically, RTH 556 and RTH 570 are taken concurrently in a student's second to last semester on campus. Typically, RTH 576 is taken in a student's last semester on campus. These nine credits apply to both the undergraduate and graduate degrees.
- ² Students must have special non-degree graduate student status before registering for their graduate courses.
- ³ The elective course will be determined jointly by the student and the program director.

Internship in senior year:

RTH 498 Internship in Therapeutic Recreation will be taken for 12 credits while the student is an undergraduate. To be admitted to RTH 498, students must achieve a 2.5 cumulative and major GPA and have successfully completed all program course work. The internship will be in either the Spring or Summer term of the student's senior year.

After RTH 498 Internship in Therapeutic Recreation is completed, the student will graduate with their Bachelor of Science with a major in therapeutic recreation.

Master of Science curriculum

- **Fall semester:** RTH 701, RTH 740, RTH 750
- **Spring semester:** RTH 730, RTH 720, three credit elective
- **Summer or Fall 2:** graduate capstone (three credits)

Total for M.S. = 30 credits, including the nine credits of graduate courses (RTH 556, RTH 576, and RTH 570) taken during the undergraduate years

For complete details regarding application procedures, contact the Therapeutic Recreation Program Director in the Department of Recreation Management and Therapeutic Recreation.

Degree requirements

All students must complete the general education, college core (waived for therapeutic recreation majors), major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)

¹ PSY 212 Lifespan Development, PSY 204 Abnormal Psychology, and ESS 205/BIO 312 Human Anatomy and Physiology I fulfill, in part, criteria for becoming a Certified Therapeutic Recreation Specialist (CTRS). For any PSY 212, PSY 204, or ESS 205/BIO 312 course substitutes/transfers, students are advised to verify satisfactory content with the National Council for Therapeutic Recreation Certifications (NCTRC). See the Therapeutic Recreation Program Director for more information.

² **To be considered for admission to the dual degree program, the student must:**

1. Be a current therapeutic recreation student who has completed at least 75 undergraduate credits.
2. Have completed or is concurrently taking RTH 252, RTH 319, RTH 329, PSY 204, ESS 205 (or BIO 312).
3. Have a minimum cumulative UWL GPA of 3.2 to apply.

For complete details regarding application procedures, contact the Therapeutic Recreation Program Director in the Department of Recreation Management and Therapeutic Recreation.

Inclusive Recreation Minor

The Americans with Disabilities Act mandates that agencies offering recreation programs must accommodate people with disabilities.

The inclusive recreation minor prepares professionals from various disciplines to address concerns such as accessibility, knowledge of disabilities, appropriate programming, and adapting activities.

Persons employed in the following types of settings would benefit from this minor: play areas, recreation facilities such as amusement rides, boating facilities, fishing piers and platforms, miniature golf courses, golf courses, sporting facilities, swimming pools and spas, outdoor developed areas, YMCAs, and youth clubs. Persons involved in the following professions would benefit from this minor: recreation management, education, physical education, fitness, special education, health and wellness, psychology, business, sports management, and other social and human service areas.

The **inclusive recreation minor** is not a comprehensive therapeutic recreation curriculum, nor is it intended to lead toward national certification. The inclusive recreation minor is academic preparation to assist professionals who are interested in providing inclusive recreation programs.

The School of Education (SOE) at the University of Wisconsin-La Crosse represents a collection of teacher education programs housed in a variety of departments and colleges across campus. Approximately 900 students are enrolled in teacher education programs at UW-La Crosse (UWL). Students enrolled in teacher education programs benefit from the numerous PK-12 school partnerships, which aim to promote best practices in teaching and learning.

Majors

Mission, vision, and conceptual framework

WI license ranges

Admission to teacher education programs

- Department of Educational Studies (DES) programs (ECE, EME, SPE, TESOL) (p. 593)
- *Secondary Teacher Education Preparation (STEP): Middle and High School Education Program*
- *Art, Music, and World Language Education Programs*
- Physical, Adapted, and School Health Education (PASHE) Program (p. 596)

Criminal background check policy

School of Education program requirements for teacher candidates

- School of Education core requirements (p. 597)
- Statutory and general education requirements (p. 598)
- Retention policy (p. 599)
- Teacher candidate progress review (TCPR) (p. 599)
- Benchmark assessments (testing) requirements (p. 600)
- Disclosing criminal offenses (p. 600)
- Student teaching and internships (p. 600)
- *Program completion*
 - *Comprehensive assessment system and the edTPA*

License to teach application

Majors

The following teacher education majors leading to endorsement for a WI teaching license are available:

B.S. = Bachelor of Science

Early Childhood Education (B.S.) - housed in the Department of Educational Studies

- Early Childhood Education (birth - grade 3) (p. 602)

Elementary and Middle Education (B.S.) - housed in the Department of Educational Studies

- Elementary/Middle Education (grades K-9) (p. 605)
- Elementary/Middle Education (grades K-9) and French Education (grades K-12) (p. 608) - *dual licensure*
- Elementary/Middle Education (grades K-9) and Spanish Education (grades K-12) (p. 611) - *dual licensure*
- Elementary/Middle Education (grades K-9) and Special Education (grades K-12) (p. 615) - *dual licensure*
- Elementary/Middle Education (grades K-9) and Teaching English to Speakers of Other Languages (grades K-12) (p. 618) - *dual licensure*

Secondary Teacher Education Preparation (STEP): Middle and High School Education (B.S.) - housed in the related content department (Biology, Chemistry, English, History, Mathematics & Statistics, and Physics)

- Biology: Science Education (grades 4-12) Concentration (p. 407)
- Broadfield Social Studies Education (grades 4-12) (p. 101)
- Broadfield Social Studies Education (grades 4-12): History Concentration (p. 104)
- Broadfield Social Studies Education (grades 4-12): Political Science Concentration (p. 109)
- Broadfield Social Studies Education (grades 4-12): Sociology Concentration (p. 112)
- Chemistry: Science Education (grades 4-12) Concentration (p. 426)
- English Education (grades 4-12) (p. 160)
- Mathematics Education (grades 4-12) (p. 497)
- Physics: Science Education (grades 4-12) Concentration (p. 541)

Art, Music, World Language and Physical, Adapted & School Health Education (p. 595) (B.S.) - housed in the related content department (*Art, Exercise and Sport Science, Global Cultures and Languages, and Music*). *The dual licensure programs in elementary/middle education (grades K-9) and Spanish education (grades K-12) or French education (grades K-12) are housed in the Department of Educational Studies.*

- Art Education (grades K-12) (p. 96)
- French Education (grades K-12) (p. 176)
- French Education (grades K-12) and Teaching English to Speakers of Other Languages (grades K-12) (p. 179) - *dual licensure*
- Music Education (grades K-12): Choral and General Music Emphasis (p. 253)
- Music Education (grades K-12): Instrumental and General Music Emphasis (p. 256)
- Physical (grades K-12), Adapted (grades K-12), and School Health (grades K-12) Education (PASHE) (p. 466) - *triple licensure*
- Spanish Education (grades K-12) (p. 191)
- Spanish Education (grades K-12) and Teaching English to Speakers of Other Languages (grades K-12) (p. 194) - *dual licensure*

Mission, values, and conceptual framework

Mission

The mission of the School of Education is to develop within its graduates a commitment to the teaching profession, a profound respect for the dignity of all learners, and the professional competencies that enable them to be effective teachers and responsible citizens in a diverse and dynamic world.

Values

Lead: We are engaging and leading many disciplines of teacher education. We are focused on teaching and learning with best practice and dynamic strategies in mind that result in high student achievement.

Educate: We strive for the highest quality professional teacher education programs, and we believe in continuous improvement with 21st century teaching and learning in mind.

Collaborate: We believe teacher quality matters and through partnerships with our regional school districts and outstanding veteran educators our teacher candidates are afforded high quality experiences.

Innovate: We are dedicated to supporting the use of technology to support teaching and learning, so that our teacher candidates are prepared for the 21st century learning environment.

Conceptual framework

Vision: The School of Education strives to become a leader in the preparation of globally responsive teachers through a university-wide commitment to teacher education.

Definition: The globally responsive teacher believes that all learners can learn at high levels and persists in helping all learners achieve success. The teacher appreciates and values human diversity, shows respect for learners' varied talents and perspectives, and commits to the pursuit of excellence for all learners. Globally responsive teaching includes infusion of a strong academic curriculum linked to world events, geography, world cultures, and diverse perspectives. Globally responsive teachers act to make the world a healthy and more sustainable and just environment.

A globally responsive professional education program includes the following:

- Teacher candidates gain understanding of contemporary content issues from a variety of perspectives.
- Teacher candidates learn how to employ discipline specific skills in their analyses of global issues.
- Teacher candidates design integrated curricular units so their students will have a greater understanding of the world.
- Teacher candidates are encouraged and supported to engage in international study abroad programs.
- Teacher candidates develop model lessons that infuse global awareness into their curriculum.
- Teacher candidates develop enrichment of cultural, environmental, and/or civic issues.
- Teacher candidates consider content issues, both local and global, using technology and community resources to enhance learning and expand their resource networks.

Accreditation

- Higher Learning Commission (North Central Association)
- Wisconsin Department of Public Instruction since 1937

State law governing WI educator preparation programs

- Wis. Administrative Code § PI 34 (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/)

Interstate Teacher Assessment and Support Consortium (InTASC) Model Core Teaching Standards

Teacher education programs at UWL also meet InTASC Model Core Teaching Standards.

- Standard 1: Learner Development
- Standard 2: Learning Differences
- Standard 3: Learning Environment
- Standard 4: Content Knowledge
- Standard 5: Application of Content
- Standard 6: Assessment
- Standard 7: Planning for Instruction
- Standard 8: Instructional Strategies
- Standard 9: Professional Learning and Ethical Practice
- Standard 10: Leadership and Collaboration

School of Education resources

Several resources for education students, university faculty, and area teachers are provided through the School of Education.

- **Alice Hagar Curriculum Resource Center** - Located on the upper floor of Murphy Library (<http://www.uwlax.edu/murphylibrary/>), the Center contains many teacher education materials and references for all grade levels.
- **Collaborative Learning Studio** - Located in 3212 Centennial Hall, this room is accessible to teacher candidates and faculty to study, practice lessons, deliver lectures using state of the art technology, and collaborate with partners external to the university.
- **1:1 Student iPad Program** - The School of Education (SOE) is committed to staying abreast with current technology trends in our area PK-12 schools, and to supporting 21st century learning environments. In alignment with local school districts, the School of Education has a 1:1 iPad device policy. Students admitted to teacher education programs will have a current model iPad for use in pre-professional courses and clinical experiences, and strategies for utilizing this technology in future PK-12 classrooms are incorporated across the curriculum. The fee for the iPad will appear on the student's bill after being admitted to the program. This is a financial aid eligible program fee. This iPad will become the student's personal property and the student will be responsible for the costs associated with loss or damage of the device. Complete details can be found on the student iPad requirement (<https://www.uwlax.edu/soe/resources/ipad-requirement/>) webpage.

Wisconsin Department of Public Instruction (DPI) license ranges

The following WI license ranges and subject areas, found in Wis. Administrative Code § PI 34 (<https://docs.legis.wisconsin.gov/code/>)

admin_code/pi/34/), are aligned with UWL programs starting in the 2021-22 catalog.¹ The WI DPI license code is indicated in parentheses.

Early childhood: birth-grade 3 (2088)

Elementary and middle school: grades K-9 (2088)

Middle and high school: grades 4-12 for the following subjects:

- English (2300)
- Mathematics (1400)
- Science (2600)
- Social Studies (2700)

Kindergarten through grade 12 for the following subjects:

- Adapted Physical Education (1860)
- Art (1550)
- Health (1910)
- French (1355)
- Music (2500)
- Physical Education (1530)
- Spanish (1365)

¹ In 2018, the Wisconsin Department of Public Instruction changed the Administrative Code (Wis. Admin. Code § PI 34 (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/)) regulating educator licensing. Like all educator preparation programs in Wisconsin, UWL is authorized to prepare and endorse teacher candidates completing programs under the pre-2018 license ranges until August 2023. Teaching licenses and programs based on the developmental levels prior to 2018 can be found in earlier catalogs (<http://catalog.uwlax.edu/archivedcatalogs/>).

Admission to teacher education programs Department of Educational Studies programs

Department of Educational Studies
335 Morris Hall; 608.785.8152

Department Chair: Leslie Rogers - 335B Morris Hall; 608.785.8142
ECE Program Director: Dawn Rouse - 340B Morris Hall; 608.785.5412
EME Program Director: Yuko Iwai - 365A Morris Hall; 608.785.5407
TESOL Program Coordinator: Heather Linville - 240C Morris Hall; 608.785.8326

www.uwlax.edu/educational-studies/ (<https://www.uwlax.edu/educational-studies/>)

The Department of Educational Studies (DES) is committed to preparing teachers who can teach all students in all schools - rural, urban, or suburban - while preparing teacher leaders for a global society. We prepare teacher candidates to become teachers who ground curriculum in the lives of students; who embrace multicultural perspectives and uphold just teaching practices; value academically rigorous curriculum; and are culturally sensitive.

Teacher candidates who complete a DES program are eligible for WI teaching license in either the early childhood (2088, birth - grade 3) or elementary and middle school (2088, grades K-9) ranges. Teacher candidates who complete a dual licensure program are also eligible for a WI teaching license in the kindergarten - grade 12 (K-12) range in the aligned area. DES programs that lead to dual licensure include Elementary and Middle School (2088, grades K-9) with Special Education (2081, grades K-12) or Teaching English to Speakers of Other Languages (ESL certification 1395, grades K-12). Two additional programs offered

in collaboration with the Global Cultures & Languages Department (p. 170) lead to dual licensure in Elementary and Middle School (2088, grades K-9) and French (1355, grades K-12) or Spanish (1365, grades K-12).

According to WI Department of Public Instruction criteria, students must apply to the School of Education for admission to any teacher education program. DES has specific criteria that must be met before being admitted to a program. The process of applying to an SOE program and links to specific program admission requirements are available on the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) webpage. Students are also required to successfully pass a criminal background check (p. 597) in order to be admitted to any teacher education program. Meeting minimum criteria does not guarantee admission. Admission to the School of Education is competitive, and some programs have limited capacity.

Admission to a Department of Educational Studies program

Students interested in completing a teacher education program at UW-La Crosse may declare a teacher education major and be assigned an advisor in their program at any point in their career at UW-La Crosse. However, students must apply for and be accepted into the School of Education in order to register for certain education courses, progress to a degree, and complete licensure requirements.

The Department of Educational Studies admission policies pertain to the following teacher education programs:

Birth - grade 3:

- Early Childhood Education (ECE)

Grades K-9:

- Elementary/Middle Education (EME)

Grades K-9 and grades K-12: (*dual licensure*)

- Elementary/Middle Education (EME) and Teaching English to Speakers of Other Languages (TESOL)
- Elementary/Middle Education (EME) and Special Education
- Elementary/Middle Education (EME) and French Education
- Elementary/Middle Education (EME) and Spanish Education

Applicants must meet the following **minimum criteria** in order to apply for admission:

1. **Preliminary course work/credits completed:** applicants must have a minimum of 24 credits in which grade points have been earned (including transfer credits), have successfully completed EDS 203 and EDS 206, and must be concurrently enrolled or have successfully completed EDS 308 in order to apply. Applicants can only be officially admitted to the School of Education after the completion of 40 credits.
2. **Combined cumulative grade point average:** applicants must have earned a combined cumulative GPA of 2.85 in all academic work taken prior to applying for admission. Combined cumulative GPAs include transfer grade points averaged with grade points earned at UWL. For applicants with prior post-secondary degrees, the grades from the entire previous course of study will be included in the combined cumulative GPA.
3. Applicants are required to disclose past criminal offenses (p. 600) to be admitted to any teacher education program.

Other factors that may be considered in admissions decisions:

1. **Writing statement:** applicants must submit a writing statement based on a prompt supplied in the application for admission. See "admission requirements" on the Department of Educational Studies (<http://www.uwlax.edu/educational-studies/>) website for the specific prompt.
2. **Progress through professional course work** (EDS 311, EDS 318): courses completed or in progress may be considered when there are more applicants for admission than class sizes allow.
3. **Experience working with children:** applicants may be asked to describe their experience working with children and/or to provide contact information for references. See "admission requirements" on the Department of Educational Studies (<http://www.uwlax.edu/educational-studies/>) website for specifics on what information will need to be supplied in the application for admission.

Request for an admission GPA waiver:

Applicants who have significant extenuating circumstances that prevent them from meeting the minimum GPA requirement above may provide a detailed letter (in addition to the other required information) requesting that the GPA requirement be waived and documenting why they should still be considered for admission. Documentation should include evidence to support the request for consideration. (See "admission requirements" on the Department of Educational Studies (<http://www.uwlax.edu/educational-studies/>) website for prompts.) Applicants must also provide contact information for one reference who can support their request and who can speak to their ability to be successful in their teacher education program. A request for a waiver is not a guarantee of admission. Waivers will be considered depending on space availability, the nature of the request, and the likelihood for success in the program as evaluated by the admissions committee.

Application procedures

Students who meet the criteria described above and wish to apply should complete the School of Education application for admission (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>). Additional information, including contact information for the Admission Committee Chair is also available on the website.

Applications must be completed and submitted by 4:00 p.m. on the Friday of the third week of the fall or spring semester. Late or incomplete applications will not be considered. Admission decisions will be sent to applicants via e-mail no later than Friday of the eighth week of each semester. Any applicant who changes between majors with a licensure track must reapply for admission. Readmission will be based on current admission criteria.

Secondary Teacher Education Preparation (STEP): Middle and High School Education (grades 4-12) programs

STEP Program Director: Jennifer Kosiak (Mathematics) - 1004 Cowley Hall; 608.785.8385

www.uwlax.edu/secondary-teacher-education-preparation (<http://www.uwlax.edu/secondary-teacher-education-preparation/>)

Based in the School of Education, the Secondary Teacher Education Preparation Program (STEP) is a collaborative university-wide program committed to preparing knowledgeable, skillful, and professional middle and high school teachers who have the content and pedagogical knowledge to meet the needs of students in a variety of settings. Teacher candidates who complete a STEP program are eligible for a WI teaching license in the middle and high school (grades 4-12) range in

the subjects of English and Language Arts (2300), Mathematics (1400), Science (2600), or Social Studies (2700).

According to WI Department of Public Instruction criteria, students must apply to the School of Education for admission to any teacher education program. The STEP Program has specific criteria that must be met before being admitted to a program. The process of applying to an SOE program and links to specific program admission requirements are available on the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) webpage. The STEP Program has additional admission standards and retention and advancement standards. Students are also required to successfully pass a criminal background check (p. 597) in order to be admitted to any teacher education program. Meeting minimum criteria does not guarantee admission. Admission to the School of Education is competitive, and some programs have limited capacity.

Admission to a Secondary Teacher Education Preparation program

Students wishing to apply for admission to the School of Education do so based on specific program admission criteria. Admission is competitive and successful completion of application requirements does not guarantee admission into the program. Course substitutions may be authorized by the program director in consultation with the SOE Certification Officer. Curriculum changes may result in a revision of courses and other criteria used as admission requirements. Students who wish to be considered for admission into the program must follow the application process below and will be evaluated using the criteria described below.

The Secondary Teacher Education Preparation (STEP) admission policies pertain to the following programs in the grades 4-12 licensure range:

- English Education
- Social Studies Education
- Social Studies Education: History Concentration
- Social Studies Education: Political Science Concentration
- Social Studies Education: Sociology Concentration
- Biology: Science Education Concentration
- Chemistry: Science Education Concentration
- Physics: Science Education Concentration
- Mathematics Education

Phase I: Complete application survey

Applications to SOE STEP programs are accepted starting on the first day of classes during both the fall and spring semesters. Students who meet the application criteria below may complete the online application for admission survey for STEP (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>). **The application must be completed by 11:59 p.m. on the Friday of week three of the application semester.**

Eligibility criteria:

- Completion of ENG 110 or ENG 112 with a grade of "C" or higher
- Completion of a minimum of 40 earned credits (including transfer credits)
- Completion of or current enrollment in EDS 203 or EDS 206
- At least a 2.75 combined cumulative grade point average¹

¹ The GPA listed on the current academic transcript is used to satisfy the GPA requirement for admission purposes. A GPA waiver process exists for students whose current grade point average falls below 2.75. For more details on this process, refer to the GPA Waiver and Admissions Appeal Policy below.

The following materials need to be submitted in the application survey:

- Current resume
 - For resume samples, visit UWL Career Services (<https://www.uwlax.edu/aacccs/studentsalumni/searching-for-jobinternships/>).
- Unofficial transcript
 - Upload an unofficial transcript from WINGS.
- Educational Experience Reflection Paper based on the required coursework (listed above)
 - See the STEP Educational Experience Reflection Paper Guidelines (https://uwlax-my.sharepoint.com/:w/g/personal/mchedister_uwlax_edu/EULXYluube1Lhm5OK9WkWeEBbK0HN3o5OWUiK_NqvmxIXQ/?e=POymcv) for more information.

Phase II: Interview

Once the application deadline has passed, faculty members within each STEP discipline will review the completed applications. Approximately two weeks following the application close date (end of week five), applicants will be notified of whether or not they will be moving on to the interview portion of the application process. Meeting the minimum application eligibility criteria does not guarantee an interview.

Phase III: Admission

Available resources limit the number of students admitted each semester. Not all students completing the application process are admitted to STEP. Admission decisions will be sent to the applicants via e-mail by Friday of the eighth week of the semester.

Admission decisions are contingent upon criminal background check (CBC) (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/for-teacher-candidates/#tm-criminal-background-check>) clearance by the UWL Office of Field Experience. Applicants are required to disclose past criminal offenses (p. 600) to be admitted to any teacher education program. Please see the admission to SOE (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) webpage for additional information and requirements.

Request for an admission GPA waiver and admission appeal

Students who do not meet the minimum GPA requirement for admission may request the committee grant a waiver of this Phase I criterion. This waiver request must be completed as part of the Phase I application survey (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>), by uploading the following **additional** documents:

- Written statement of appeal identifying the reason(s) why the GPA requirement was not satisfied and why the committee should approve a waiver in this case.
- Two letters of support from faculty/staff or other professionals who can address the issue being appealed.

Students who are not admitted may appeal the admission decision by submitting a letter of appeal to the STEP Admission Committee by November 1 for Fall applicants and April 1 for Spring applicants. The student may be asked to meet with the committee as part of the appeal

process. Students will be notified of the appeal decision in a timely manner. The appeal decision is final.

Students who meet minimum eligibility requirements (see Phase I) may reapply to the School of Education for admission to the STEP program at any time during their academic career at UWL.

Art, Music, and World Language Education (grades K-12) programs

AWLME Program Director (Interim): Adrienne Loh - 235 Morris Hall; 608.785.8275

Teacher candidates who complete an art, music, or world language program are eligible for a WI teaching license in the kindergarten-grade 12 range in the subjects of Art (1550), Music (2500), French (1355), or Spanish (1365).

According to WI Department of Public Instruction criteria, students must apply to the School of Education for admission to any teacher education program. The Art, Music, and World Language Education programs have specific criteria that must be met before being admitted to a program. The process of applying to an SOE program and links to specific program admission requirements are available on the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) webpage. Students are also required to successfully pass a criminal background check (p. 597) in order to be admitted to any teacher education program. Meeting minimum criteria does not guarantee admission. Admission to the School of Education is competitive, and some programs have limited capacity.

Admission to an Art, Music, and World Language Education program

Students interested in completing a teacher education program at UW-La Crosse may declare a teacher education major and be assigned an advisor in their program at any point in their career at UW-La Crosse. However, students must apply for and be accepted into the School of Education in order to register for certain education courses, progress to a degree, and complete licensure requirements.

The Art, Music, and World Language Education admission policies pertain to the following teacher education programs in the grades K-12 licensure range:

- Art Education
- Music Education: Choral and General Emphasis
- Music Education: Instrumental and General Emphasis
- Spanish Education
- Spanish Education and Teaching English to Speakers of Other Languages (*dual licensure; grades K-12 in both*)
- French Education
- French Education and Teaching English to Speakers of Other Languages (*dual licensure; grades K-12 in both*)

Although applicants apply after at least 24 credits are earned, applicants can only be officially admitted to the School of Education after the completion of 40 credits.

Applicants must meet the following **minimum criteria** in order to apply for admission:

1. **Preliminary course work:** applicants must have a minimum of 40 credits in which grade points have been earned (including transfer credits) and must have successfully completed EDS 203, or have successfully completed and/or be concurrently enrolled

in EDS 203 and EDS 206 at the time of application for admission in order to apply.

2. **Combined cumulative grade point average:** applicants must have earned a combined cumulative GPA of 2.75. Combined cumulative GPAs include transfer grade points averaged with grade points earned at UWL. For applicants with prior post-secondary degrees, the grades from the entire previous course of study will be included in the combined cumulative GPA.
3. Applicants are required to disclose past criminal offenses (p. 600) to be admitted to any teacher education program.

Request for an admission GPA waiver:

Applicants who have significant extenuating circumstances that have prevented them from meeting the minimum requirement above may provide a detailed letter (in addition to the other required information) requesting that the GPA requirement be waived and documenting why they should still be considered for admission. Documentation should include evidence to support the request for consideration. (See "admission requirements" on the Department of Educational Studies (<http://www.uwlax.edu/educational-studies/>) website for prompts.) Applicants must also provide contact information for one reference who can support their request and who can speak to their ability to be successful in their teacher education program. A request for a waiver is not a guarantee of admission. Waivers will be considered depending on space availability, the nature of the request, and the likelihood for success in the program as evaluated by the admissions committee.

Application procedures

Students who meet the criteria described above and wish to apply should complete the School of Education application for admission (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>). Additional information, including contact information for the Admission Committee Chair is also available on the website.

Applications must be completed and submitted by 4:00 p.m. on the Friday of the third week of the fall or spring semester. Late or incomplete applications will not be considered. Admission decisions will be sent to applicants via e-mail no later than Friday of the eighth week of each semester. Any applicant who changes between majors with a licensure track must reapply for admission. Readmission will be based on current admission criteria.

Physical, Adapted, and School Health Education (PASHE) (grades K-12) program

Department of Exercise and Sport Science (p. 460)
124 Mitchell Hall; 608.785.8173
PASHE Program Director (Interim): Rachyl Stephenson - 230 Cartwright Center; 608.785.5415

www.uwlax.edu/exercise-sport-science/undergraduate-majorsminors/physical-adapted-and-school-health-education/ (<https://www.uwlax.edu/exercise-sport-science/undergraduate-majorsminors/physical-adapted-and-school-health-education/>)

Teacher candidates who complete the PASHE Program are eligible for a WI teaching license in the kindergarten - grade 12 range in the areas of Physical Education (1350), Adapted Physical Education (1860), and Health (1910). Graduates of the PASHE Program are highly sought after. The PASHE Program balances traditional coursework and activities with an abundance of practical experiences. This balance provides students with the knowledge and hands-on experiences to enter the teaching profession prepared and confident.

According to WI Department of Public Instruction criteria, students must apply to the School of Education for admission to any teacher education program. The PASHE Program has specific criteria that must be met before being admitted to a program. The process of applying to an SOE program and links to specific program admission requirements are available on the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) webpage. All majors in the Department of Exercise and Sport Science have additional admission standards and retention and advancement standards. Students are also required to successfully pass a criminal background check (p. 597) in order to be admitted to any teacher education program. Meeting minimum criteria does not guarantee admission. Admission to the School of Education is competitive, and some programs have limited capacity.

Admission to the Physical, Adapted, and School Health Education Program

Students majoring in the Physical, Adapted, and School Health Education (PASHE) Program must apply for admission to the School of Education based on specific program admission criteria. Admission is competitive and successful completion of application requirements does not guarantee admission into the program. Course substitutions may be authorized by the program director. Curriculum changes may result in a revision of courses and other criteria used as admission requirements.

Students who wish to be considered for acceptance into the PASHE Program (K-12 licensure range) will be evaluated using the following criteria:

1. Completion and grade point average (GPA) of foundation courses - Student must earn a "C" or better in each course.

Code	Title	Credits
Foundation courses		
ESS 118	Foundations of Physical and School Health Education	2
EDS 203	School, Society, and Teachers ¹	3
EDS 206	Multicultural Education ²	3
Total Credits		8

2. Completion of or concurrent enrollment in the following PASHE foundation courses:

Code	Title	Credits
ESS 121	Teaching Adventure Education in Physical Education	2
ESS 200	Introduction to Teaching Methods in Physical and School Health Education	2
ESS 212	Teaching Fundamental Movement Skills in Physical Education	3
ESS 231	Introduction to Teaching Adapted Physical Education	3
Total Credits		10

¹ Counts toward General Education Program requirement: Self and Society (GE Category 6). Also satisfies an SOE core requirement.

² Counts toward General Education Program requirement: Minority Cultures or Multiracial Women's Studies (GE Category 3). Also satisfies an SOE core requirement.

3. Completion of 30 college credits
4. At least 2.75 combined cumulative GPA (including transfer grade points)
5. Current resume
6. Online reference form
7. Teaching philosophy and reflection paper
8. A satisfactory interview with PASHE admission committee members
9. A criminal background check (p. 597)

See the admission to School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) website for additional information and requirements.

Request for an admission GPA waiver

Applicants who have extenuating circumstances preventing them from meeting the GPA admission criterion may provide a request for a GPA waiver consideration if their GPA is not below 2.70. The request is submitted through the PASHE electronic admission application survey, and must include:

- A written statement of appeal. The appeal should include reason(s) why the requirement was not satisfied, and why the committee should approve a waiver in this case (e.g., in justification of the request, please submit convincing evidence of academic success, personal circumstances beyond your control, prospects for success as a teacher).

The student may be asked to meet with the PASHE faculty as part of the appeal process. The decision after the appeal is final.

The curriculum requirements for the PASHE major are on the exercise and sport science major: physical, adapted, and school health education (p. 466) page.

SOE criminal background check policy

The WI Department of Public Instruction (DPI) requires that candidates for admission to a teacher education, administration, or pupil services program successfully pass a criminal background check (CBC) as one criterion for admission. By applying for admission to one of these programs, candidates agree to provide the necessary personal information to UWL in order to initiate their CBC, and to complete their portion of the process prior to the deadline specified in their admission letter. Candidates are responsible for all costs associated with their criminal background check(s). Admission decisions by programs are contingent upon CBC clearance by the UWL Office of Field Experience or designated graduate program representative.

Additional criminal background checks may be required for teacher candidates if the time period between criminal background checks exceeds five years, or if there are other mandated CBCs that must be met. The Office of Field Experience will record the criminal background checks conducted each semester.

Procedures

1. The requirement for a criminal background check (CBC) at the time of application for admission is shared with candidates through website, electronic admission application, advisement report, and UWL catalog material.
2. Candidates complete an electronic application for admission to the School of Education that includes an authorization to perform a CBC.

3. The Office of Field Experience emails criminal background check instructions to candidates who have applied for admission to the School of Education.
4. Teacher candidates must complete the CBC process, including paying any fees associated with the CBC, within the timeline set out in their admission letter. Admission decisions are contingent upon a successful CBC as evaluated by the Office of Field Experience.
5. Candidates may need to complete additional CBCs prior to field experience(s) and/or student teaching experiences.
6. Candidates must notify the Office of Field Experience as soon as possible, but no later than the day after the event occurs, if they have been convicted of any crime or have been or are being investigated by any governmental agency for any act or offense. Candidates who fail to report may be required to meet with the Teacher Candidate Progress Review Committee; failure to report may result in termination of a field experience, internship, practicum or student teaching placement.
7. Disclosure forms must be completed by candidates each semester prior to participation in a school observation, clinical field experience, or any other school experience.
8. The Office of Field Experience staff monitors the criminal background check process, and in the case of field experience courses, notifies course instructors when candidates have been cleared to enter the schools.
9. In the event the background check discloses criminal activity or information that would prohibit a candidate from entering the teaching profession, the candidate will not be admitted into any education program, and may be dropped from the program if previously admitted.

School of Education program requirements for all teacher candidates

School of Education (SOE) core requirements

Students ("teacher candidates") in a School of Education program or in a SOE-affiliated teacher preparation program housed in the College of Science and Health (CSH) or College of Arts, Social Sciences, and Humanities (CASSH), are required to complete the below courses. Teacher candidates must also meet other benchmarks required by the WI Department of Public Instruction and the School of Education as part of program completion requirements (p. 601). Teacher candidates successfully completing one of these programs earn a Bachelor of Science (B.S.) degree from UWL.

General education courses

Code	Title	Credits
EDS 203	School, Society, and Teachers ¹	3
EDS 206	Multicultural Education ²	3
Total Credits		6

Courses not requiring admission to School of Education

Code	Title	Credits
Child/motor development ³		3-6
ECE 214 & ECE 215	Child Growth and Development for ECE: Birth-Age 3 and Child Growth and Development for ECE: Ages 4-8 (PK-Grade 3)	3
ESS 207	Human Motor Behavior	
PSY 212	Lifespan Development	
Preparation in teaching students with disabilities ^{3, 4}		3
ESS 231	Introduction to Teaching Adapted Physical Education	
SPE 200	Foundations of Special Education	
Total Credits		6-9

Courses requiring admission to School of Education

Code	Title	Credits
Pre-student teaching		8-18
At least two teaching methods courses (may be combined courses including field experience) ⁵		
At least two pre-student teaching field experience courses, developmental in scope and sequence (may be combined courses including methods) ^{5, 6}		
Student teaching semester ⁷		
EDS 492	Student Teaching Seminar	1
One semester of full time student teaching aligned with declared program: ^{3, 6}		11
EDS 490	Student Teaching: Early Childhood Education (birth-grade 3)	
EDS 491	Student Teaching: Elementary/Middle Education (K-9)	
EDS 495	Teaching Internship	
EDS 496	Student Teaching: Middle/High School Education (4-12)	
EDS 497	Student Teaching: Kindergarten through Grade 12 (K-12)	
SPE 497	Student Teaching: Cross-Categorical Special Education (K-12)	
Total Credits		20-30

¹ Counts toward General Education Program requirement: Self and Society (GE Category 6). Also satisfies Wisconsin Act 31 and Wis. Admin. Code § PI 34.022(3).

² Counts toward General Education Program requirement: Minority Cultures or Multiracial Women's Studies (GE Category 3). Also satisfies Wis. Admin. Code § PI 34.022(3)

³ See individual program requirements for which course is required in that specific program.

⁴ Also satisfies Wis. Admin. Code § PI 34.022(7).

⁵ Individual programs may have additional methods and/or field course requirements. See specific program requirements for details.

⁶ Also satisfies Wis. Admin. Code § PI 34.023(2).

⁷ Must complete all course requirements and other benchmarks prior to student teaching. For more information, please see the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>).

General education and WI statutory requirements for teacher education programs

Wisconsin Department of Public Instruction (DPI) requires all initial licensure programs to meet statutory Wisconsin Educator Standards as part of a teacher preparation program. (Wis. Admin. Code § PI 34.002 (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/11/)). All teacher preparation programs at UWL are aligned to WI teacher standards/InTASC standards.

DPI requires all initial licensure programs to include a general education program as part of a bachelor's degree program or higher. (Wis. Admin. Code § PI 34.018(3) (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/iv/018/3/)). All education programs must also include assessment of candidates' communication skills (Wis. Admin. Code § PI 34.021(1)(a) (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/iv/021/1/a/)).

The two-year transfer policy does not exempt students from SOE-required general education, program-specific general education, or WI statutory requirements.

WI State statutory requirements

Wis. Admin. Code § PI 34.022 (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/iv/022/) lists several specific requirements for teacher candidates, some of which are associated with particular programs. Additional details can be found on the appropriate program's catalog page.

- **Cooperative Marketing and Consumer Cooperatives:** ECO 110 or ECO 120 - applies to programs leading to licenses in social studies
- **Environmental Education and Conservation:** GEO 200 - applies to programs leading to licenses in early childhood, elementary and middle education, science and/or social studies
- **Equity & Minority Group Relations:** EDS 203 and EDS 206 - applies to all teacher education programs
- **Conflict Resolution:** applies to all teacher education programs (through student teaching experiences)
- **Teacher Responsibilities:** applies to all teacher education programs (through student teaching experiences)
- **Reading and Language Arts:** applies to programs leading to licenses in early childhood, elementary and middle education (through program-specific requirements)
- **Children with Disabilities:** applies to all teacher education programs (through program-specific SOE core requirements)
- **Professional Responsibilities:** applies to all teacher education programs (through field and student teaching experiences)

Required general education courses for all teacher education programs

In some cases, specific courses within the UWL General Education Program are required of all teacher education candidates in order to meet licensing and/or statutory requirements. Besides the below, individual programs may have additional required general education courses, as specified on the appropriate program catalog page.

Code	Title	Credits
------	-------	---------

UWL GE Category 1:

Satisfies Wis. Admin. Code § PI 34.021(1)(a) requirement:
Communication Skills

CST 110	Communicating Effectively ¹	
ENG 110	College Writing ¹	
	or ENG 112 College Writing AP (Advanced Placement)	

UWL GE Category 3:

Satisfies Wis. Admin. Code § PI 34.022(3) requirement: Equity & Minority Group Relations

EDS 206	Multicultural Education	
---------	-------------------------	--

UWL GE Category 6:

Satisfies Wis. Admin. Code § PI 34.022(3) requirement: History, Culture, and Tribal Sovereignty of American Indian Tribes and Bands Located in Wisconsin

EDS 203	School, Society, and Teachers	
---------	-------------------------------	--

¹ Must earn a grade of "C" or better to satisfy this requirement.

Retention policy

Teacher candidates may be retained in their teacher education program as long as they fulfill the following conditions:

1. Maintain at least a 2.75 combined cumulative GPA (3.00 for graduate candidates);
2. Meet required benchmark assessment criteria (testing, portfolio) required by the candidate's program;
3. Maintain appropriate professional disposition; *and*
4. Are otherwise in good standing with the university and EPC.

Teacher candidates who do not meet GPA requirements and/or who have been referred to **teacher candidate progress review (TCPR)** for dispositional concerns may be approved to continue in their program by the TCPR Committee.

Teacher candidate progress review (TCPR)

SOE faculty and staff (including clinical and student teaching personnel) recognize some candidates seeking certification may need additional supports to meet minimal professional standards; therefore, a committee has been established to identify and to counsel candidates in need of directed guidance. The guidance may include a plan, and if necessary, additional measures or follow up plans. In rare cases, the TCPR referral process may lead to the candidate's removal from the teacher education program(s) if the support plan does not successfully remediate the concerns.

The SOE Teacher Candidate Progress Review (<https://www.uwlax.edu/soe/resources/resources-for-facultystaff/epc-committees/teacher-candidate-progress-review-committee-tcpr/>) Committee is charged with overseeing the development and assessment of knowledge, skills, and dispositions among teacher candidates as assessed by the multiple measures of the established teacher education assessment system. Academic and non-academic misconduct (plagiarism, cheating, etc.) are referred directly to the Office of Student Life as outlined in the university's student handbook (<https://www.uwlax.edu/student-life/student-resources/student-handbook/>).

If issues related to the progress of candidates are identified, a referral is initiated using the Teacher Candidate Progress Review Referral Form, and the candidate receives a copy of the referral. The SOE Dean will forward a copy to the candidate's advisor, the academic services

director/certification officer, department chair, and/or the content liaison, as appropriate. There are three types of referrals:

- Notice of concern,
- Automatic referral, and
- Program referral

Notice of concern

1. A concerned faculty or staff member completes a written notice of concern. The candidate is required to schedule an appointment to review the content of the notice of concern form. A minimum of two faculty or staff members will discuss the referral with the candidate and provide him/her with a copy of the referral form. After the content of the referral form is discussed, the candidate signs the referral form acknowledging receipt.
2. The faculty or staff member submits the signed referral form to the Office of the SOE Dean; copies of the form are sent to the appropriate individuals and placed in the candidate's permanent file.
3. If two notices of concern are received or if the student is in field experiences/student teaching, the candidate is automatically referred to the Teacher Candidate Progress Review Committee by the SOE Dean. For candidates enrolled in pupil services certification programs (school psychology), each notice of concern will be sent to the program director. The program will work with the candidate to develop an action plan.

Automatic referral(s) to the Teacher Candidate Progress Review Committee

Automatic referrals include, but are not limited to, concerns needing immediate intervention related to the candidate's knowledge, skills, and/or dispositions, or concerns related to the candidate's GPA.

GPA-related automatic referrals:

If a candidate is unable to meet the minimum cumulative GPA requirement for graduation (2.75), the candidate is automatically referred to TCPR. The committee or its designee will evaluate program performance using the following alternative assessment plan (approved by WI DPI 1/20/2022):

1. The candidate provides a written statement explaining the reasons for their low GPA and articulating their plans for success in their final semester(s) of courses and during student teaching.
2. The candidate also provides two letters of recommendation, one from a cooperating teacher, and one from a faculty member. Letter writers are asked to speak to the candidate's content knowledge, pedagogical knowledge, and field experience(s), and may include additional information about life experiences and academic skills that are relevant to the situation.
3. Candidates must have successfully demonstrated content knowledge either by passing the Praxis II exam, or by achieving at least a 3.0 GPA in the aligned content area based on courses identified in the approved New Licensure Program Report for their program and in the candidate's Advisement Report.
4. The portfolio of information is reviewed by the Academic Services Director/Teacher Certification Officer and SOE Dean. Candidates with GPAs above 2.50 are typically approved (see item 6 below) directly by the SOE Dean based on this alternative assessment portfolio, assuming the letters of support and candidate statement attest to the candidate's satisfactory content knowledge, pedagogical knowledge, and clinical experience.
5. Candidates with GPAs below 2.50 or who already have a TCPR support plan in place meet with the TCPR committee to hear their appeal and discusses their evidence. The committee assesses

whether there is sufficient evidence demonstrating that the candidate has met performance expectations through this body of alternative measures, and makes a corresponding recommendation to the SOE Dean. The SOE Dean approves the use of alternative measures based on the committee recommendation.

6. Approval for the use of alternative measures of assessment of program performance are contingent upon successful completion of field I, field II, and student teaching (clinical experience assessment), and a passing score on the edTPA (pedagogical assessment).

Non-GPA-related automatic referrals:

1. An issue requiring immediate intervention related to the candidate's knowledge, skills, and/or dispositions is identified, and an automatic referral form is completed. The candidate is required to schedule an appointment to review the content of the automatic referral form. A minimum of two faculty or staff members will discuss the referral with the candidate and provide him/her with a copy of the referral form. After the content of the referral form is discussed, the candidate signs the referral form acknowledging receipt.
2. The faculty or staff member submits the signed referral form to the Office of the SOE Dean; copies of the form are sent to the appropriate individuals and placed in the candidate's permanent file.
3. The candidate is automatically referred to the Teacher Candidate Progress Review Committee by the SOE Dean and will be required to appear at the next committee meeting to address the concerns cited in the automatic referral. When the candidate meets with the committee, the concerns are reviewed, and the candidate addresses these concerns. After the candidate has met with the committee, the committee recommends further action. If the candidate fails to meet with the committee, they will be unable to continue in their program of study.

Program referral(s) to the Teacher Candidate Progress Review Committee

Faculty and staff (including clinical and student teaching personnel) who have concerns about a candidate's knowledge, skills, and/or dispositions as described within the teacher education program standards shall document and initiate the referral process by completing the referral form. For the purpose of facilitating the referral process, the following procedures are used:

- The faculty or staff member discusses the referral with the candidate and provides them with a copy of the referral form.
- The faculty or staff member delivers the referral form to the appropriate program director or department chair. The faculty involved decide if the referral form is to be sent to the Teacher Candidate Progress Review Committee or remediated within the program. The candidate is notified of the decision within two weeks regarding action or remediation plan. If the remediation plan is unacceptable to the candidate, they may appeal the plan to the committee.
- If so deemed, referral forms and the referred student's academic record(s) and performance are reviewed by the committee at the next monthly meeting in which they are received.

Benchmark assessments (testing) policy

The WI Department of Public Instruction is specific in its requirements about the content of both general education and professional education. DPI requires teacher education candidates to complete a variety of benchmark assessments (tests) detailed below. Additional information can be found on the School of Education (<https://www.uwlax.edu/soe/undergrad/benchmark-assessments/>) website. The WI State Superintendent of Public Instruction determines passing scores.

Teacher education candidates are expected to work closely with their academic advisor in order to understand these requirements and be sure they are met in a timely manner. Completion of DPI requirements for licensure may take longer than four academic years.

Assessments required prior to approval for student teaching:

Prior to enrolling in the student teaching/internship semester and in order to be recommended for licensure by the certification officer, candidates must provide:

1. One of the following to demonstrate content knowledge (Wis. Admin. Code § PI 34.021(1)(c) (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/iv/021/1/c/)):
 - a. An official Praxis Subject Assessment (formerly Praxis II) score report documenting passing scores on Praxis Subject Assessment content tests in the appropriate certification area/discipline; or
 - b. A 3.0 GPA or higher in all certified content subject areas, as determined by grades earned in courses aligned with the content area. Specific courses aligned with the content knowledge GPA benchmark are indicated on each student's Advisement Report.
2. An official Wisconsin Foundations of Reading Test (FoRT) score report documenting a passing score of at least 240 (required **only** for candidates seeking a license to teach in Kindergarten to grade 5, and/or in special education) as required by Wis. Stat. § 118.19(14) (a) (<https://docs.legis.wisconsin.gov/statutes/statutes/118/19/14/a/>).
3. An official American Council Teaching of Foreign Languages score report demonstrating oral and written proficiency (Wis. Admin. Code § PI 34.021(1)(c) (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/iv/021/1/c/)) with a rating of "Intermediate High" in French and/or Spanish (required **only** for candidates seeking a teaching license in French or Spanish).

Disclosure of criminal offenses policy

Students applying for admission to teacher education, field experiences, and student teaching placements will be asked at each stage to disclose any criminal charges filed against them through a self report form. Applicants with a felony conviction that would prohibit them from entering the teaching profession will not be admitted into any teacher education program. Student applicants with lesser charges, such as misdemeanors not involving children, shall be permitted to apply to teacher education programs.

Any student who has been convicted of a criminal offense must contact the Wisconsin Department of Public Instruction (<https://dpi.wi.gov/tepd/licensing/background/>) to discuss eligibility for a teaching license.

Student teaching and internship policy

The student teaching experience is completed during the final semester in residence. Students must apply for student teaching (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/for-teacher-candidates/>) through the Office of Field Experience one year prior to the student teaching semester by the deadlines posted online for a fall or spring semester placement. There are special course fees associated with student teaching and internship experiences (additional information (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/handbook/>) available on the SOE website).

As required by Wis. Admin. Code § PI 34.023(2) (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/IV/023/), teacher candidates student teach for a full semester as calculated according to

the calendar of the cooperating school. Most cooperating schools are located within approximately 50 miles of La Crosse.

To be eligible for student teaching, candidates must:

1. have completed all coursework to meet general education, program, and WI statutory requirements;
2. have and maintain at least 2.75 combined cumulative grade point average;
3. have successfully completed all benchmark assessments (testing requirements) for the appropriate certification area/discipline; *and*
4. have demonstrated appropriate professional disposition and be in good standing with the university and the School of Education.

During the student teaching semester, eligible candidates must be enrolled in one or more of the student teaching courses listed in the SOE core requirements (p. 597) aligned with their declared program and the concurrent student teaching seminar course.

Internships

To be eligible to apply for a student teaching internship, candidates must be formally admitted to the School of Education and must possess and maintain a combined cumulative grade point average of at least 3.00. Students must apply for a student teaching internship by completing the student teaching application (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/for-teacher-candidates/>) through the Office of Field Experience one year prior to the student teaching semester by the deadlines posted online for a fall or spring semester placement. Interns are assigned to a school that is part of the Wisconsin Improvement Program (WIP) for an entire semester. The Office of Field Experience, with support of faculty recommendations, admits students to the internship program. There are additional fees associated with WIP internships (full details (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/handbook/#tm-out-of-area-student-teaching-placements>) are available on the Field Experience website), and interns are paid a stipend determined by WIP.

Program completion

Comprehensive assessment system in teacher education

All teacher candidates seeking certification must successfully complete procedures related to program admission, progression, and exit criteria. The Comprehensive Assessment System at UWL tracks teacher candidates' progress toward meeting competencies in the InTASC (Interstate Teacher Assessment and Support Consortium) Model Core Teaching Standards, appropriate content standards, professional dispositions, and other Wisconsin teacher preparation requirements as described in the Wisconsin Administrative Code for Educator Licenses, PI 34. Teacher candidates must earn and maintain the cumulative, major, and minor grade point averages required by their respective program of study. Course and field experience assessments are designed to monitor professional growth in the InTASC Model Core Teaching Standards. The Comprehensive Assessment System is aligned with the assessment criteria specified in Wis. Admin. Code § PI 34.021 (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/iv/021/).

Pedagogical knowledge and the Wisconsin edTPA (Education Teacher Performance Assessment)

The Wisconsin Department of Public Instruction is committed to ensuring that highly prepared and effective teachers educate Wisconsin students. A part of that commitment is to make certain that all initial license applicants are ready to teach before they receive

a license. In addition, Wis. Admin Code § PI 34.021(d) (https://docs.legis.wisconsin.gov/code/admin_code/pi/34/iv/021/1/d/) requires that candidates for a teaching license demonstrate pedagogical knowledge. At UWL, the performance assessment that all candidates must successfully pass to demonstrate pedagogical knowledge is the edTPA (<https://www.uwlax.edu/soe/undergrad/benchmark-assessments/>).

Candidates who do not earn a passing score on the edTPA may be eligible for a partial or complete retake/resubmission. The UWL edTPA Retake Policy (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/handbook/#tm-assessments-during-the-clinical-field-experience-program>) is available on the School of Education website.

Graduation for candidates unable to complete student teaching

Teacher candidates who complete all other university and teacher education program requirements, but who fail to successfully complete the benchmark assessments and/or the student teaching/internship experience for extenuating reasons, may apply for admission to UWL's General Studies Program (p. 65) to earn a Bachelor of Arts (B.A.) or a Bachelor of Science (B.S.) degree in general studies. Interested teacher candidates must complete an application and correspond with the Academic Services Director (ASD) of the College of Arts, Social Sciences, and Humanities (CASSH), the student's advisor, and with the ASD for the School of Education. This degree will not earn an endorsement for a WI teaching license.

Teaching license application

Wisconsin: Graduates desiring a license to teach in Wisconsin may submit an application through Educator Licensing Online (ELO) (<https://dpi.wi.gov/tepd/licensing/>). When all certification requirements are satisfactorily completed, the Academic Services Director/Teacher Certification Officer will upload program completion data for all candidates into ELO. After the program data has been uploaded into ELO, applicants will be able to complete the license application. There is an application fee (<https://dpi.wi.gov/tepd/licensing/application-fee/>) for an initial educator license.

Other States: Graduates seeking certification in other states should contact the state Department of Education in which certification is desired and submit the appropriate application materials. Candidates should be aware that license rules are different in all states, so they should seek information about licensing requirements early in the professional preparation program. Most states require documentation of program completion (institutional endorsement) on a form specific to the state's application requirements that must be signed by the Academic Services Director/Teacher Certification Officer.

Educational Studies Department (EDS)

School of Education
Department Chair: Leslie Rogers

www.uwlax.edu/educational-studies/ (<http://www.uwlax.edu/educational-studies/>)

Few professions offer the challenges, satisfactions, and rewards available in a teaching career. One's individuality and creativity are cultivated in the exciting processes of creating opportunities for learning. The joy of watching people learn, whether children, adolescents, or young adults, is a benefit of this profession.

The primary purpose of the Department of Educational Studies (DES) is to advance teaching and learning while preparing teacher leaders for a global society. In collaboration with our public-school partners, our teacher preparation program contributes to the teaching profession by producing educators who ground curriculum in students' lives, embrace multicultural perspectives, uphold just teaching practices, value academically rigorous curriculum for all, and employ culturally and linguistically responsive methods. Our graduates are reflective practitioners who continuously improve their abilities and are responsive to best practices. DES houses programs that lead to licensure by the Wisconsin Department of Public Instruction (DPI) through majors that include preparation in Early Childhood Education, Elementary/Middle School, Special Education, and Teaching English to Speakers of Other Languages (TESOL).

General education writing emphasis

This department incorporates a significant amount of writing through the required courses instead of identifying particular courses as writing emphasis courses. Students who complete a major in this department will fulfill the general education writing emphasis requirement (p. 66).

2022-23 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

Majors

- Early childhood education (birth-grade 3) major - BS (p. 602)
- Elementary/middle education (grades K-9) major - BS (p. 605)
- Elementary/middle education (grades K-9) and French education (grades K-12) major - BS (p. 608) (*dual licensure*)
- Elementary/middle education (grades K-9) and Spanish education (grades K-12) major - BS (p. 611) (*dual licensure*)
- Elementary/middle education (grades K-9) and special education (grades K-12) major - BS (p. 615) (*dual licensure*)
- Elementary/middle education (grades K-9) and teaching English to speakers of other languages (grades K-12) major - BS (p. 618) (*dual licensure*)

Minors

- Teaching English to speakers of other languages minor (p. 622) (*does not lead to teaching license*)

Early Childhood Education (Birth-Grade 3) Major - Bachelor of Science (BS)

The primary purpose of the **Early Childhood Education (Birth-Grade 3) Program** is to advance teaching and learning while preparing teacher leaders for a global society. Our teacher preparation program, in collaboration with our public school partners, contributes to the teaching profession by producing teachers who believe that all students have the ability to achieve high standards, who adapt their teaching to reach all students, and who respect the diversity of all students. We prepare teacher candidates to become teachers who ground curriculum in the lives of students; who embrace multicultural perspectives and uphold just teaching practices; value academically rigorous curriculum; and are culturally sensitive. Our graduates are reflective practitioners who continuously improve their abilities and are responsive to best practices.

Major requirements

Completion of the Early Childhood Education Program and associated benchmark assessments (<http://catalog.uwlax.edu/undergraduate/>)

education/#SOE-program-requirements) will lead to endorsement for the following Wisconsin teaching license:

- Early Childhood - Regular Education, birth - grade 3 (2088).

Students in all teacher education programs must satisfy the School of Education (SOE) core requirements (p. 597).

Students in all teacher education programs must be admitted to the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) in order to complete their program requirements and be eligible for endorsement for the appropriate teaching license(s). Students majoring in early childhood education (birth - grade 3) must meet specific program admission criteria (p. 593).

Retention and advancement

Teacher candidates may be retained in their teacher education program provided they fulfill the conditions described in the SOE Retention Policy (<http://catalog.uwlax.edu/undergraduate/education/#retention>). Students must complete all course requirements and other benchmarks prior to student teaching as described in the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>). Additional SOE program requirements, including the culminating assessment of pedagogical knowledge, are described on the SOE catalog page (<http://catalog.uwlax.edu/undergraduate/education/>).

Curriculum

The Early Childhood Education Program is aligned with InTASC Teacher Standards and the National Association for the Education of Young Children (NAEYC) Standards.

Required general education courses (23 credits)

Besides the courses specified below, early childhood education majors must satisfy additional general education requirements (<http://catalog.uwlax.edu/undergraduate/generaleducation/#generaleducationrequirements>text). The General Education Program requires a total of 42 credits.

Code	Title	Credits
EDS 203	School, Society, and Teachers ^{1,9}	3
EDS 206	Multicultural Education ^{2,9}	3
MTH 115	Mathematics for Early Childhood and Elementary Teachers I ³	3
MTH 116	Mathematics for Early Childhood and Elementary Teachers II ³	2

⁹ Also satisfies an SOE core requirement.

¹⁰ Must complete all course requirements and other benchmarks prior to student teaching. For more information, please see the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>).

Additional teacher education requirements are listed on the School of Education (p. 591) catalog page.

Degree requirements

All teacher education students must complete the general education, School of Education, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- School of Education requirements (p. 591)
- Baccalaureate degree requirements (p. 604)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)

8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

¹ MUS 317 and ART 302 are recommended.

² PHY 106 is recommended.

³ See the SOE admissions website for complete admission and application details. Students are required to complete a criminal background check at the time of application for admission.

⁴ Students applying for field and student teaching placements will be asked to disclose any criminal charges (p. 600).

⁵ Students must apply for student teaching (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/for-teacher-candidates/>) through the Office of Field Experience one year prior to the student teaching semester.

⁶ HED 207 is recommended.

⁷ For more information, please see the Student Teaching and Internships Policy (p. 600).

Elementary/Middle Education Major (Grades K-9) - Bachelor of Science (BS)

The Elementary/Middle Education (EME) programs prepare future teachers to teach the four “regular education” major subject areas (English and language arts, math, science, social studies) in grades K-9. This single certification program will prepare future teachers with the skills and dispositions to serve all students in their classrooms and allows them to specialize in one or more areas of interest through declaring a content minor or by taking a collection of electives.

DES offers four other pathways to this regular education teaching license that also prepare students for an additional license in one of the following high needs areas: special education (grades K-12), teaching English to speakers of other languages (TESOL) (grades K-12), Spanish (grades K-12), or French (grades K-12).

Major requirements

Completion of the Elementary/Middle Education Program and associated benchmark assessments (<http://catalog.uwlax.edu/undergraduate/education/#SOE-program-requirements>) will lead to endorsement for the following Wisconsin teaching license:

- Elementary and Middle School, grades K-9 (2088).

Students in all teacher education programs must satisfy the School of Education (SOE) core requirements (p. 597).

Students in all teacher education programs must be admitted to the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) in order to complete their program requirements and be eligible for endorsement for the appropriate teaching license(s). Students majoring in elementary/middle education (grades K-9) must meet specific program admission criteria (p. 593).

Retention and advancement

Teacher candidates may be retained in their teacher education program provided they fulfill the conditions described in the SOE Retention Policy (<http://catalog.uwlax.edu/undergraduate/education/#retention>). Students must complete all course requirements and other benchmarks prior to student teaching as described in the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>). Additional SOE program requirements, including the culminating assessment of pedagogical knowledge, are described on the SOE catalog page (<http://catalog.uwlax.edu/undergraduate/education/>).

Curriculum

The Elementary/Middle Education Program is aligned with InTASC Teacher Standards and the national CAEP (elementary) and AMLE (middle-level) Standards.

Required general education courses (26 credits)

Besides the courses specified below, elementary/middle education majors must satisfy additional general education requirements (<http://catalog.uwlax.edu/undergraduate/generaleducation/#generaleducationrequirements>). The General Education Program requires a total of 42 credits.

Code	Title	Credits

- ⁹ Also satisfies an SOE core requirement.
- ¹⁰ Credits taken to satisfy another requirement in this major cannot be used to meet French minor requirements.
- ¹¹ Field experience will be blended between regular education (elementary or middle) and French education.
- ¹² Includes experience with high school (grades 9-12) lesson planning and observations.
- ¹³ Must complete all course requirements and other benchmarks prior to student teaching. For more information, please see the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>).

Study abroad requirement

- All students should consult with their advisor in French regarding specific requirements for study abroad;
- All French education majors are required to complete an approved foreign language immersion experience of at least 14 weeks (one semester);
- French education majors are required to complete the 300-level core of courses before studying abroad;
- Up to 15 credits of the 400-level and the electives categories may be taken abroad with faculty approval.

Language proficiency for student teaching requirements

Prior to student teaching, teacher candidates are required to

- Demonstrate proficiency with an "Intermediate High" rating on the American Council Teaching of Foreign Languages Oral Proficiency test (ACTFL-OPic) and
- Demonstrate proficiency with an "Intermediate High" rating on the American Council Teaching of Foreign Languages Written Proficiency test in French (ACTFL-WPT internet).

Additional teacher education requirements are listed on the School of Education (p. 591) catalog page.

Degree requirements

All teacher education students must complete the general education, School of Education, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- School of Education requirements (p. 591)
- Baccalaureate degree requirements (p. 610)

(p. 610)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

- Fulfill the general education requirements.
- Complete at least one ethnic studies (diversity) course.
- Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
- Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1, 2}
- At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
- Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
- A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
- Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course

and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

- Depending on placement, additional courses may be required to meet the prerequisite for enrollment in FRE 300.
- See the SOE admissions website (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) for complete admission and application details. Students will be required to complete a criminal background check (p. 597) at the time of application for admission.
- MUS 317 is recommended.
- PHY 106 is recommended.
- HED 207 is recommended.
- Students applying for field and student teaching placements will be asked to disclose any criminal charges (p. 600).
- Students must apply for student teaching (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/for-teacher-candidates/>) through the Office of Field Experience one year prior to the student teaching semester.
- For more information, please see the Student Teaching and Internship Policy (p. 600).

Elementary/Middle Education (K-9) and Spanish Education (K-12) Major - Bachelor of Science (BS)

The **Elementary/Middle Education (grades K-9) and Spanish Education (grades K-12) major** provides a pathway for future teachers to be dual-licensed in both regular education (English and language arts, math, science, social studies in grades K-9) and Spanish (grades K-12). Teacher candidates seeking both licenses must complete **both** the EME-SPA major **and** a Spanish content minor in order to be endorsed for both teaching licenses. Program requirements typically require 5 years to complete and include an immersion experience. Candidates may earn retroactive credits (p. 170) in Spanish by placing into 200 or 300 level Spanish courses.

The combination of a regular education (grades K-9) license and a Spanish license will be particularly valuable to future teachers who are interested in teaching at an immersion or bilingual school, both of which are frequently run at the elementary level. Additionally, World Language has been identified as a teacher shortage area in WI, and thus this additional pathway to World Language licenses serves an important need to provide more qualified Spanish teachers in the state.

Major requirements

Completion of the Elementary/Middle Education and Spanish Education Program and associated benchmark assessments (<http://catalog.uwlax.edu/undergraduate/education/#SOE-program->

requirements) will lead to endorsement for the following Wisconsin teaching licenses:

- Elementary and Middle School, grades K-9 (2088) and
- Spanish, grades K-12 (1365).

Students in all teacher education programs must satisfy the School of Education (SOE) core requirements (p. 597).

Students in all teacher education programs must be admitted to the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) in order to complete their program requirements and be eligible for endorsement for the appropriate teaching license(s). Students majoring in elementary/middle education (grades K-9) and Spanish education (grades K-12) must meet specific program admission criteria (p. 593).

Retention and advancement

Teacher candidates may be retained in their teacher education program provided they fulfill the conditions described in the SOE Retention Policy (<http://catalog.uwlax.edu/undergraduate/education/#retention>). Students must complete all course requirements and other benchmarks prior to student teaching as described in the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>). Additional SOE program requirements, including the culminating assessment of pedagogical knowledge, are described on the SOE catalog page (<http://catalog.uwlax.edu/undergraduate/education/>).

Beginning language proficiency

All students with Spanish language on their transcripts and/or prior experience in Spanish must take the UW System Placement exam and are required to enroll at their level of placement. Students with no evidence of prior study of Spanish are required to begin Spanish at SPA 103.

Curriculum

The Elementary/Middle Education and Spanish Education Program is aligned with InTASC Teacher Standards, Wisconsin DPI World Language Standards, and the national CAEP (elementary) and AMLE (middle-level) Standards.

Minor requirement

Elementary/middle education and Spanish education majors must also complete a Spanish minor (<http://catalog.uwlax.edu/undergraduate/globalcultureslanguages/spanish-minor/>) (21 credits) in order to be endorsed for a Spanish, grades K-12 (1365) teaching license.

Required general education courses (26 credits)

Besides the courses specified below, elementary/middle education and Spanish education majors must satisfy additional general education requirements (<http://catalog.uwlax.edu/undergraduate/generaleducation/#generaleducationrequirementsstext>). The General Education Program requires a total of 42 credits.

Code	Title	Credits

EDS 491	Student Teaching: Elementary/Middle Education (K-9)
EDS 497	Student Teaching: Kindergarten through Grade 12 (K-12)

EDS 495 Teaching Internship

Total Credits 47

⁹ Also satisfies an SOE core requirement.

¹⁰ Credits taken to satisfy a Spanish content course requirement in this major cannot be used to meet Spanish minor requirements. Between the major and the minor, it is recommended candidates complete a total of two courses with a literature-focus (SPA 352, SPA 353, SPA 354, SPA 355) and two courses with a language-focus (SPA 369, SPA 370, SPA 380, SPA 381, SPA 382) from the "Identities and Perspectives" category.

¹¹ Field experience will be blended between regular education (elementary or middle) and Spanish education.

¹² Includes experience with high school (grades 9-12) lesson planning and observations.

¹³ Must complete all course requirements and other benchmarks prior to student teaching. For more information, please see the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>).

Study abroad requirement

- All students should consult with their advisor in Spanish regarding specific requirements for study abroad;
- All Spanish education majors are required to complete an approved language immersion experience of at least 14 weeks (one semester); students should consult with a Spanish advisor when planning this experience;
- Students are required to complete the 12 credit core of courses before studying abroad;
- Spanish education majors may take up to six credits of the Level IV and V category abroad. Consult with Spanish advisor for applicability.

Language proficiency for student teaching requirements

Prior to student teaching, teacher candidates are required to

- Demonstrate proficiency with an "Intermediate High" rating on the American Council Teaching of Foreign Languages Oral Proficiency test in Spanish (ACTFL-OPIC) and
- Demonstrate proficiency with an "Intermediate High" rating on the American Council Teaching of Foreign Languages Written Proficiency test in Spanish (ACTFL-WPT internet).

Additional teacher education requirements are listed on the School of Education (p. 591) catalog page.

Degree requirements

All teacher education students must complete the general education, School of Education, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- School of Education requirements (p. 591)
- Baccalaureate degree requirements (p. 613) (p. 613)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1, 2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psprod/?cmd=logins&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and

summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

- Depending on placement, additional courses may be required to meet the prerequisite for enrollment in a SPA 300-level course.
- See the SOE admissions website (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) for complete admission and application details. Students will be required to complete a criminal background check (p. 597) at the time of application for admission.
- MUS 317 is recommended.
- PHY 106 is recommended.
- HED 207 is recommended.
- Students applying for field and student teaching placements will be asked to disclose any criminal charges (p. 600).
- Students must apply for student teaching (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/for-teacher-candidates/>) through the Office of Field Experience on year prior to the student teaching semester.
- For more information, please see the Student Teaching and Internship Policy (p. 600).

Elementary/Middle Education (K-9) and Special Education (K-12) Major - Bachelor of Science (BS)

The **elementary/middle education (grades K-9) and special education (grades K-12) major** provides a pathway for future teachers to be dual-licensed in both regular education (English and language arts, math, science, social studies in grades K-9) and cross-categorical special education (grades K-12).

Both federal and state law includes provisions for supporting students with disabilities in K-12 classrooms. The Individuals with Disabilities Education Act (IDEA, 2004) was adopted and modified in WI in Act 258 in 2006. These laws require schools/districts to assess and provide services for children with disabilities. For decades, schools' predominant model was a "pull-out" model, where students with disabilities were pulled out of general classrooms and supported by Special Education professionals in a separate setting. However, the pull-out model is most often not the "Least Restrictive Environment" (LRE) for students. (LRE, as established in IDEA regulations, must be offered to students who require special education services.) For more than 80% of students

requiring special education services, the LRE is the general education setting. The inclusive model, in which all children are included in the general classroom and instruction is differentiated, requires that educators be equipped with the skills to understand, assess, and support the needs of students with disabilities in general education classrooms. The EME/SPE program will prepare future teachers with the skills and dispositions to better understand learner development, explore critically important special education topics such as the intersectionalities between disabilities, race, and other markers of difference, and employ research-based strategies both in inclusive classrooms and in specialized settings.

Major requirements

Completion of the Elementary/Middle Education and Special Education Program and associated benchmark assessments (<http://catalog.uwlax.edu/undergraduate/education/#SOE-program-requirements>) will lead to endorsement for the following Wisconsin teaching licenses:

- Elementary and Middle School, grades K-9 (2088) and
- Cross-Categorical Special Education, grades K-12 (2081).

Students in all teacher education programs must satisfy the School of Education (SOE) core requirements (p. 597).

Students in all teacher education programs must be admitted to the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) in order to complete their program requirements and be eligible for endorsement for the appropriate teaching license(s). Students majoring in elementary/middle education (grades K-9) and special education (grades K-12) must meet specific program admission criteria (p. 593).

Retention and advancement

Teacher candidates may be retained in their teacher education program provided they fulfill the conditions described in the SOE Retention Policy (<http://catalog.uwlax.edu/undergraduate/education/#retention>). Students must complete all course requirements and other benchmarks prior to student teaching as described in the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>). Additional SOE program requirements, including the culminating assessment of pedagogical knowledge, are described on the SOE catalog page (<http://catalog.uwlax.edu/undergraduate/education/>).

Curriculum

The Elementary/Middle Education and Special Education Program aligned with InTASC Teacher Standards, the national CAEP (elementary) and AMLE (middle-level) Standards, and the CEC Special Education Professional Preparation Standards.

Required general education courses (26 credits)

Besides the courses specified below, elementary/middle education and special education majors must satisfy additional general education requirements (<http://catalog.uwlax.edu/undergraduate/generaleducation/#generaleducationrequirementstext>). The General Education Program requires a total of 42 credits.

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA.^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence. December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.

² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan,

and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/regISTRATION/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=login&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

¹ HED 207 is recommended.

² See the SOE admissions website (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) for complete admission and application details. Students will be required to complete a criminal background check (p. 597) at the time of application for admission.

³ PHY 106 is recommended.

⁴ Students applying for field and student teaching placements will be asked to disclose any criminal charges (p. 600).

⁵ Students must apply for student teaching (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/for-teacher-candidates/>) through the Office of Field Experience one year prior to student teaching semester.

⁶ MUS 317 is recommended.

⁷ For more information, please see the Student Teaching and Internship Policy (p. 600).

Elementary/Middle Education (Grades K-9) and TESOL (Grades K-12) Major - Bachelor of Science (BS)

The elementary/middle education (grades K-9) and teaching English to speakers of other languages (grades K-12) major provides a pathway for

future teachers to be dual-licensed in both regular education (English and language arts, math, science, social studies in grades K-9) and English as a Second Language (grades K-12). Both federal and state law include provisions for supporting English learners (ELs) in K-12 classrooms. Title VI of the Civil Rights Act of 1964 (Title VI) requires that schools and districts take affirmative steps to ensure that multilingual students can meaningfully participate in their educational programs and services, while the Equal Educational Opportunities Act (EEOA) mandates that public schools and state educational agencies (SEAs) must act to overcome language barriers that impede equal participation by students in their instructional programs. The proportion of EL students in K-12 classrooms is increasing, yet there is a shortage of EL certified teachers in WI. There is a critical need to prepare more qualified EL teachers to support our K-12 learners locally and across the state. This program will prepare future teachers with the skills and dispositions to differentiate instruction to serve all students in their classrooms.

Major requirements

Completion of the Elementary/Middle Education and Teaching English to Speakers of Other Languages Program and associated benchmark assessments (<http://catalog.uwlax.edu/undergraduate/education/#SOE-program-requirements>) will lead to endorsement for the following Wisconsin teaching licenses:

- Elementary and Middle School, grades K-9 (2088) and
- English as a Second Language, grades K-12 (ESL, 1395).

Students in all teacher education programs must satisfy the School of Education (SOE) core requirements (p. 597).

Students in all teacher education programs must be admitted to the School of Education (<https://www.uwlax.edu/soe/undergrad/admission-to-soe/>) in order to complete their program requirements and be eligible for endorsement for the appropriate teaching license(s). Students majoring in elementary/middle education (grades K-9) and teaching English to speakers of other languages (grades K-12) must meet specific program admission criteria (p. 593).

Retention and advancement

Teacher candidates may be retained in their teacher education program provided they fulfill the conditions described in the SOE Retention Policy (<http://catalog.uwlax.edu/undergraduate/education/#retention>). Students must complete all course requirements and other benchmarks prior to student teaching as described in the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>). Additional SOE program requirements, including the culminating assessment of pedagogical knowledge, are described on the SOE catalog page (<http://catalog.uwlax.edu/undergraduate/education/>).

Language proficiency program requirements

Students must complete both A and B requirements prior to student teaching.

A. Proficiency in a world language (no credits) as demonstrated by one of the following:

- Advanced Placement (AP) world language exam score of 3 or higher
- Placing into a 201-level or higher world language course at UWL

- A score of 70 or higher on the La Crosse Battery (non-native speakers of English)
- A grade of "B" or better in a 102-level or higher world language course (taught in the world language) taken at UWL. See below world language course list.¹

Curriculum

The Elementary/Middle Education and Teaching English to Speakers of Other Languages (TESOL) Program is aligned with InTASC Teacher Standards, the national CAEP (elementary) Standards and AMLE (middle level) Standards, and CAEP/TESOL (ESL) Standards.

Required general education courses (26 credits)

Besides the courses specified below, elementary/middle education and teaching English to speakers of other languages majors must satisfy additional general education requirements (<http://catalog.uwlax.edu/undergraduate/generaleducation/#generaleducationrequirements>). The General Education Program requires a total of 42 credits.

⁹ Also satisfies an SOE core requirement.

¹⁰ Includes experience with high school learners (grades 9-12).

¹¹ Must complete all course requirements and other benchmarks prior to student teaching. For more information, please see the Student Teaching and Internship Policy (<http://catalog.uwlax.edu/undergraduate/education/#student-teaching>).

Additional teacher education requirements are listed on the School of Education (p. 591) catalog page.

Degree requirements

All teacher education students must complete the general education, School of Education, major/minor, and university degree requirements in order to qualify for a degree. The easiest way to track all of these requirements is to refer to the Advisement Report (AR) found in the Student Information System (WINGS) Student Center. All enrolled students have access to the AR.

- General education (p. 66)
- School of Education requirements (p. 591)
- Baccalaureate degree requirements (p. 620)

(p. 620)

Baccalaureate degree requirements

Candidates for the Bachelor of Arts or the Bachelor of Science degrees must accomplish the following:

1. Fulfill the general education requirements.
2. Complete at least one ethnic studies (diversity) course.
3. Complete the courses prescribed by the Undergraduate Curriculum Committee for the degree desired in the respective school or college. (No substitutions for graduation may be made in course requirements for a major or minor after the fourth week of the last semester of the senior year.)
4. Earn a minimum of 120 semester credits with at least a 2.00 cumulative GPA. ^{1,2}
5. At least 40 credits must be earned in 300/400 level courses. Transfer courses earned or transferred at the 300/400 level apply to this requirement.
6. Complete major and minor requirements with at least a 2.00 GPA ^{1,2} in each major and minor (and concentration or emphasis, if selected).
7. A minimum of 30 semester credits in residence at UWL is required for graduation. (See undergraduate resident requirement (p. 40).)
8. Submit an application for graduation via the "Apply for Graduation" link in the WINGS Student Center as soon as the student has registered for his or her final semester or summer term in residence.

December and winter intersession graduates should apply by May 1. May and summer graduates should apply by December 1.

- ¹ Grade point average requirements for some programs will be considerably higher than 2.00. Re-entering students may be required to earn credits in excess of the 120 needed for graduation in any curriculum in order to replace credits earned in courses in which the content has changed substantially in recent years. Each case will be judged on its own merit.
- ² The grade point average recorded at the time the degree is awarded will not be affected by future enrollment.

No degree will be awarded unless all requirements are fulfilled and recorded within 30 days after the official ending date of each term.

Sample degree plan

Below is a sample degree plan that can be used as a guide to identify courses required to fulfill the major and other requirements needed for degree completion. A student's actual degree plan may differ depending on the course of study selected (second major, minor, etc.). Also, this sample plan assumes readiness for each course and/or major plan, and some courses may not be offered every term. Review the course descriptions or the class timetable (<http://www.uwlax.edu/Records/registration/>) for course offering information.

The sample degree plans represented in this catalog are intended for first-year students entering UWL in the fall term. Students should use the Advisement Report (AR) in WINGS (<https://wings.uwlax.edu/psp/csprod/?cmd=logIn&languageCd=ENG&>) and work closely with their faculty advisor(s) and college dean's office to ensure declaration and completion of all requirements in a timely manner.

General Education Program

The general education curriculum (Gen Ed) is the common educational experience for all undergraduates at UWL. Sample degree plans include Gen Ed placeholders to ensure completion of the general education requirements. Courses may be rearranged to fit the needs or recommendations of the student's program of study. Gen Ed courses may be taken during winter term (January between the semesters) and summer to reduce the course load during regular terms (fall and spring). Students should consult with their advisor and/or the college academic services director in their college/school for assistance with course and schedule planning. Refer to the general education requirements (p. 66) for more specific details.

At least 40 credits of the 120 credits required must be earned at the 300/400-level.

Note: New students and transfer students with 15 or fewer credits earned are required to take FYS 100 First-Year Seminar (3 cr.) during one of their first two semesters at UWL.

This sample degree plan does not establish a contractual agreement. It identifies the minimum requirements a student must successfully complete, to qualify for a degree, in a format intended to assist the student in planning their academic career. Actual degree plans may differ.

- ³ PHY 106 is recommended.
- ⁴ HED 207 is recommended.
- ⁵ Students applying for field and student teaching placements will be asked to disclose any criminal charges (p. 600).
- ⁶ Students must apply for student teaching (<https://www.uwlax.edu/soe/field-and-student-teaching-experience/for-teacher-candidates/>) through the Office of Field Experience one year prior to the student teaching semester.
- ⁷ For more information, please see the Student Teaching and Internship Policy (p. 600).

Teaching English to Speakers of Other Languages (TESOL) Minor

(All colleges)

18 credits (not including language proficiency requirements)

This minor does not lead to endorsement for a WI teaching license. Students seeking an English as a Second Language (ESL) teaching license should consult the School of Education (<http://catalog.uwlax.edu/undergraduate/education/>) for appropriate programs.

Language proficiency admission requirements for all TSL minors

Students must complete both A and B requirements to be admitted into the TSL minor.

A. Proficiency in a world language (no credits) as demonstrated by one of the following:

- Advanced Placement (AP) world language exam score of 3 or higher
- Placing into a 201-level or higher world language course at UWL
- A score of 70 or higher on the La Crosse Battery (non-native speakers of English)
- A grade of "B" or better in a 102-level or higher world language course (taught in the world language) taken at UWL. See below world language course list.¹

English as a Second Language Program (ESL)

School of Education

ESL Institute Director: Karolyn Bald

1140 Centennial Hall; 608.785.8016

Email: international@uwlax.edu

www.uwlax.edu/international-education/english-as-a-second-language/
(<https://www.uwlax.edu/international-education/english-as-a-second-language/>)

English as a Second Language Institute

The English as a Second Language Institute offers a flexible program for non-native speakers of English. Classes are designed primarily for international students who need to improve or strengthen their English for studying at the university. The classes are also appropriate for persons who have a serious interest in studying English as a second language (ESL) for personal or business reasons.

Classes are offered at three levels of English proficiency. A student's level is determined by a proficiency test (the La Crosse Battery), which is given before classes begin.

Admission and placement into ESL classes (p. 624)

Retention in program (p. 625)

Program requirements (p. 625)

English language proficiency admission/ placement policy

All international students who have official TOEFL scores below 550¹,² and all international students who have not taken the official TOEFL exam will be tested by the ESL Institute via the La Crosse Battery of exams prior to formal registration in classes. Students who submit TOEFL scores of 550^{1,2} or above will not be tested by the ESL Institute, will be exempt from the ESL classes, and will be granted full admission status. (Graduate program directors may also require graduate students with scores of 550 or above to take the La Crosse Battery placement exam. The full graduate ESL admissions policy is in the graduate catalog (<http://catalog.uwlax.edu/graduate/admissions/#international-admission>).

Students who score 80 or above on the La Crosse Battery will be granted exemption from ESL classes and will receive full admission status. Students who receive a score of 79 or below on the La Crosse Battery will be given limited university status and will be placed in the appropriate ESL class levels.

Students who score a 79 or below on the La Crosse Battery placement exam are allowed to submit an official TOEFL score of 550 PBT (paper-based TOEFL), equivalent on CBT (computer-based TOEFL) or IBT (Internet-based TOEFL), or other UWL recognized standardized exam for unrestricted admission to the university. Students who achieve a 550 TOEFL (or equivalent) while enrolled in ESL courses will be required to wait until the beginning of the next term before being released from the ESL program.

Students accepted into the online-only ESL program will not be eligible for or granted a US student visa.

- ¹ Comparable score is 73 on the Internet-based TOEFL exam for undergraduate students. In lieu of a TOEFL score, the following scores are acceptable for undergraduate students: a band score of 6 on the International English Language Testing System (IELTS) exam, a score of at least 54 on the Pearson Test of English (PTE), or a score of at least 100 on the Duolingo Test of English (DET). Scores cannot be more than two years old.
- ² Graduate students are required to have a 79 on the Internet-based TOEFL exam. Other acceptable proficiency tests & minimum scores for graduate students can be found in the international admissions section of the graduate catalog (<http://catalog.uwlax.edu/graduate/admissions/#international-admission>).

La Crosse Battery

The La Crosse Battery consists of four tests: Test of Aural Comprehension, Michigan Test of English Language Proficiency (grammar, vocabulary, reading comprehension), the La Crosse Composition Test, and an oral interview. The La Crosse Battery takes approximately three hours to complete. These tests, which demonstrate a student's proficiency in each language skill, will determine the placement level per skill.

Students will be placed in levels that are appropriate with their placement score (see below). Students will progress through the program until they have earned at least a "C" in courses at the 250 level¹. Students will be required to complete courses at the 250 level before being released from the ESL program and being granted unrestricted access to degree programs at UW-La Crosse. Once students reach the 200 level ESL courses, they will be allowed to take ESL courses and 1-4 credits of UWL courses outside of ESL. Once students reach the 250 level ESL courses, they will be allowed to take ESL courses and 1-6 credits of UWL courses outside of ESL.

- ¹ If students do not earn at least a "C" in their ESL courses at the 250 level, they will be required to retake the ESL courses during the next term. Students who fail courses at the 200 level and/or earn below a "C" at the 250 level, will only be allowed to take university courses outside of ESL based on the decision of the director of the ESL program.

Total average score - placement into ESL classes

Total average score on La Crosse Battery	Classes/ESL levels
59 or below – limited university admission	100 - 110 level courses
	16 credits of ESL required (full-time ESL)
60 - 73 – limited university admission	150 - 200 level courses
	16 credits of ESL required (full-time ESL)
74 - 79 – limited university admission	250 level courses
	Minimum of eight credits of ESL required (allowed to take 1-6 university credits outside of ESL)
80 or above – full university admission	Exempt from ESL (ESL courses optional)

ESL Institute retention and probation standards

Applies to ESL courses numbered 100-203.

The academic status of an ESL-only student enrolled in pass/fail ESL courses is determined by successful completion of courses with a grade of pass (P). Performance at the "C" level is required for a grade of pass in ESL transcript credit only courses (ESL 100-203).

Semesters in institute	Courses	Academic standing
1st semester	1-3 courses failed	Probation I
2nd semester (Probation I)	1-3 courses failed	Ineligible to continue ¹
3rd semester (Probation II)	1-3 courses failed	Ineligible to continue ¹
4th semester (Probation II)	1-3 courses failed	Ineligible to continue
Any Semester	F grades in all coursework	Ineligible to continue

¹ A student can choose to appeal an ineligible status to an ESL appeals committee (representation from the College of Arts, Social Sciences, and Humanities/School of Visual and Performing Art Dean's Office, the ESL Institute and the Office of International Education). If the appeal is accepted and the student is reinstated, the student will be placed on Probation II. If the appeal is denied, the student can choose to appeal to the Committee on Academic Policies and Standards (CAPS). If CAPS denies the student's appeal, the student is no longer eligible to continue in the Institute. If reinstated by the CAPS committee, the student will be placed on Probation II.

If a student has been declared ineligible three times, the student may not appeal for reinstatement to the Institute.

Students who are enrolled only in ESL Institute courses are declared ineligible to continue at the university as well. Students who are enrolled in both ESL courses and university-level courses follow ESL retention standards for ESL courses and university retention standards for university-level courses.

Intersession periods

Students who have not met the university's English language requirement will not be allowed to enroll in courses during the intersession periods (winter intersession and summer term sessions). Appeals to this policy will be handled on an individual basis.

Program requirements

The ESL (English as a Second Language) Institute operates on campus to support and prepare international students in the English language skills they will need to successfully enter and complete an academic degree program at UWL. International students who score below minimum thresholds on English language proficiency tests required for admission (lower than a 73 on the TOEFL, 6.0 on the IELTS, or 100 on the DET) will be admitted into the ESL Institute Program. International students who successfully complete all four courses in the final level of the ESL Institute Program (ESL 250, ESL 251, ESL 252, and ESL 253) with a grade of "C" or better will be fully admitted into the university as a degree-seeking student. See the Undergraduate English Language Proficiency Admission/Placement Policy (<http://catalog.uwlax.edu/undergraduate/englishasasecondlanguageesl/#admission-placement>) page and the Graduate International Student English Language

Proficiency Admission Policy (<http://catalog.uwlax.edu/graduate/admissions/#international-admission>) for more details.

Best practices in the field of teaching English to speakers of other languages (TESOL) indicate the focus of instruction should be the English language as it is used to communicate (speak, listen, read, write) about a topic and/or content-area which is of high interest to learners. By practicing the core language skills in meaningful contexts, known as the content-based instruction approach, English learner motivation and academic language learning are increased, along with the development of autonomous, independent learning strategies (Crandall & Kaufman, 2002). In order to meet the goals of effectively and efficiently preparing international students for their future academic work at UWL, the ESL Institute follows the content-based instruction approach. As such, each ESL Institute course has a primary language skill focus (listening, reading, writing, or speaking) while integrating all of the language skills, as happens in academic courses. In addition, each course has a content focus inspired by the General Education Program areas and outcomes and uses that focus to support English learners as they learn specific academic skills and their accompanying syntax and discourse features (outlined in the ESL Institute curriculum). Each course will additionally include experiential elements and a final assessment (a written or oral product). Assessments and grades will be based on each student's ability to use the English language effectively at an academic level regardless of the content area.

The ESL Institute Program includes three levels of instruction:

- **Level 1:** International students with scores of <50 TOEFL or <IELTS 5.0 or <DTE 70 will enter Level 1 and will typically take three semesters to be eligible for full admission in a degree seeking program.
- **Level 2:** International students with scores of <60 TOEFL or <IELTS 5.5 or <DTE 85 will enter Level 2 and will typically take two semesters to be eligible for full admission in a degree seeking program.
- **Level 3:** International students with scores of <73 TOEFL or <IELTS 6.0 or <DTE 100 will enter Level 3 and will typically take one semester to be eligible for full admission in a degree seeking program.

Some courses are multilevel, meaning students from two different levels will be able to enroll. Instructors will support lower-level students to engage fully in the course. Each course, except those in Level 3 (ESL 250, ESL 251, ESL 252, and ESL 253), can be repeated for credit. Students can move up levels within a semester if they successfully complete (grade of "A" or "AB") their first two half-semester courses in the semester.

Level 3 of ESL Institute courses (ESL 250, ESL 251, ESL 252, and ESL 253) form part of the university's General Education Program and, thus, count as college credit that undergraduate international students can use to begin their college careers. These courses earn general education credit in the Languages and Other Logical Systems section of the Mathematical/Logical Systems and Modern Languages Category (GE02).

The U.S. Department of State's regulations require international students participate in 22 hours of English language training each week they are enrolled in the ESL Institute program. Below are details on how students at each level of the ESL Institute program meet this requirement.

Curriculum

Level 1

(<50 TOEFL or <IELTS 5.0 or <DTE 70)

Students at this level must complete five ESL Institute courses per semester (four half-semester courses and one full-semester course). Students must also participate in two hours per week of the Conversation Partner Program.

Code	Title	Credits
Half-semester courses		12
ESL 102	Written English Skills: Appreciating the Arts	
ESL 103	Oral English Skills: Talking about Health and Wellness	
ESL 110	Oral English Skills: Telling your Story	
ESL 150	Oral English Skills: Wisconsin and Its People	
Full semester course		4
ESL 111	Written English Skills: Reading the Region	
Total Credits		16

Level 2

(<60 TOEFL or <IELTS 5.5 or <DTE 85)

Students at this level must complete five ESL Institute courses per semester (four half-semester courses and one full-semester course). Students must also participate in two hours per week of the Conversation Partner Program.

Code	Title	Credits
Half-semester courses		12
ESL 150	Oral English Skills: Wisconsin and Its People	
ESL 152	Written English Skills: Communicating our Values	
ESL 202	Written English Skills: Research and Writing	
ESL 203	Oral English Skills: Talking about the Environment	
Full semester course		4
ESL 151	Written English Skills: Technology and Social Media	
Total Credits		16

Level 3

(<73 TOEFL or <IELTS 6.0 or <DTE 100)

Students at this level must complete four ESL Institute courses per semester (two half-semester courses and two full-semester courses) and have the option of simultaneously enrolling in one UWL course. Students must participate in two hours per week of the Conversation Partner Program and are recommended to have two hours per week of academic tutoring.

To complete the ESL Institute Program and matriculate into a degree-seeking program, students must complete the four-course sequence: ESL 250, ESL 251, ESL 252, and ESL 253.

Code	Title	Credits
Select two of the following half-semester courses:		6
ESL 202	Written English Skills: Research and Writing	
ESL 203	Oral English Skills: Talking about the Environment	
ESL 251	Written English Skills: Reading about Data	
ESL 253	Oral English Skills: The Culture of Food	
Full semester courses		8

ESL 250 Oral English Skills: Issues and Controversies in the U.S.

ESL 252 Written English Skills: Researching Your Community

Total Credits **14**

Graduate & Extended Learning was formed by the merger of Graduate Studies and Extended Learning. We connect the university to the community by offering innovative educational opportunities. Our goal is to help our partners learn, grow, explore, and achieve more. Our work falls into five main categories, outlined below.

Graduate Education

Graduate & Extended Learning supports the work of graduate students, faculty, and programs. We coordinate several tuition award programs, grants to support graduate student projects, and a number of graduate student awards and competitions. We host Hooding Ceremonies for programs that do not hold their own graduation events. Finally, we take lead role in enacting the action steps identified within the Graduate Education Strategic Plan.

Conference and Event Services

We have expertise in conference and event planning, both for in-person and online formats. We can help you navigate campus protocols and processes, or help you plan an event in another city. We also run registration and membership processes for events and organizations. Finally, we can arrange for the creation, tracking and awarding of Continuing Education Units (CEUs) for professional events, as appropriate.

Youth Outreach Programming

We partner with UWL faculty and other educators to offer high-quality enrichment classes for upper elementary, middle, and high school students in topics spanning the arts, humanities and the sciences. We bring youth to campus for a number of events which help them see a future for themselves in higher education. We offer test preparation courses for ACT, GRE, GMAT, and LSAT. Finally, we coordinate the UWL Concurrent Enrollment Program, allowing regional high school students to earn college credit for UWL courses taught within their own high schools.

Work with UWL Departments and Staff

We support UWL departments in offering online degree and certificate programs. Some are offered in collaboration with other campuses, through UW Extended Campus. Others are 100% developed by UWL personnel. We partner with UWL faculty and staff to develop credit and non-credit outreach programs, helping them connect to the community. Finally, we support UWL personnel in hosting events and conferences, assisting them in professional service to their academic disciplines.

Professional Development

We offer an array of credit and non-credit learning opportunities, some of which are of interest to a general audience and some of which are developed in partnership with a regional employer. Strengths include the topics of health and wellness, environmental science, social justice, and education. Many of our conferences include Continuing Education Units (CEUs), documenting the value of these events as professional development opportunities.

Departments/units (p. 628) Mission & values (p. 628)
Services to students (p. 628)

Murphy Library is the campus center for academic inquiry. The library provides access to a vast and diverse collection of electronic and print resources; facilities designed to accommodate in a flexible manner a variety of learning needs; technologies that complement and enhance the acquisition, synthesis and use of information; and staff to help students find and use the quality information they need.

Departments/units

Library Department (p. 629)

Mission & values

Mission statement

Murphy Library is integral to student success at the University of Wisconsin-La Crosse. The library provides a dynamic and diverse learning environment centered on the core principles of service, stewardship, information literacy and equity of access. Exemplifying these principles, this teaching library carefully manages information resources that support and promote excellence in academic study and research, success in teaching and learning, and intellectual and cultural exploration. Murphy Library additionally serves the greater community as a regional information center.

Values statement

Murphy Library services are guided by the ALA Library Bill of Rights (<http://www.ala.org/advocacy/intfreedom/librarybill/>).

To fulfill the Library's mission, the Library Director, Library Department and Library Staff uphold the principles of the ALA Code of Ethics (<http://www.ala.org/tools/ethics/>), augmented by the following values:

People

We value library users and are committed to providing a consistently high level of services to all: students, faculty, staff, and community members. We believe in open communication and treating users and library colleagues with courtesy and respect. We respect the confidentiality of users' information requests and library records.

Access

We provide the greatest access possible to information in various formats, in collaboration with faculty, to support the instructional and research-related fields of the university curriculum. We share library

resources through interlibrary loan and cooperative ventures with other libraries. We organize collections and manage digital and physical access for ease of retrieval by a diverse group of on- and off-campus users.

Inquiry

As a teaching library, we promote critical thinking and exploration by teaching students and other users information literacy skills for university work and lifelong learning. We treasure the ideals of free speech and unfettered inquiry.

Diversity

We support an understanding and appreciation of diversity through collections and information access, services, the instruction program and staff. Read our full diversity statement (<https://www.uwlax.edu/murphylibrary/diversity/>).

Innovation

We embrace an environment of continuous change leading to new and improved library technologies, products and services.

Stewardship

We utilize funding responsibly and seek cooperative arrangements with other libraries to maximize the benefits for library users. We maintain our collections, a secure facility, and a healthful environment for current and future users. We preserve the local cultural heritage by collecting regional materials.

Services to students

• Resources

- Databases and journals
- Books/e-books, streaming video, and other multimedia
- University archives
 - La Crosse history
 - Rare books
- Digital collections
- Alice Hagar Curriculum Center
- Government collections and depository (Federal and State)
- Guides and reference materials

• Services

- Consultations with a librarian (by appointment, walk-up, phone, email, chat, and via Zoom)
 - Research assistance/guidance
 - Use of technology
 - Borrowing materials
 - Reserving materials and room(s)
 - Tutorials and videos on using the library and finding scholarly resources
 - Tours
 - Purchase recommendations
- Interlibrary loan
- UW System resource sharing
- Course materials on reserve
- Technology
 - PC and Mac computers
 - B/W and color printing
 - Scanning stations

- Laptops and iPads for check-out
- Moveable large screen monitors
- Moveable whiteboards
- Whiteboard tables
- Scientific calculators
- Adaptive technology like keyboard and mouse
- Fax
- Notary Public
- **Spaces**
 - Collaborative Learning Commons on the ground floor
 - Quiet second floor and basement
 - Alice Hagar Curriculum Center
 - Group study rooms
 - Study carrels
 - Silent study room
 - Murphy's Mug café

Library Department

Murphy Library

Department Chair: David Mindel

118 Murphy Library; 608.785.8945

Email: dmindel@uwlax.edu

www.uwlax.edu/murphylibrary/about-the-library/library-department/
(<https://www.uwlax.edu/murphylibrary/about-the-library/library-department/>)

As faculty in a student-centered teaching library, Library Department members strive to ensure that UWL students graduate as information literate citizens with the ability to recognize when information is needed, and with the ability to locate, evaluate, and use information effectively and ethically. We set Murphy Library's curriculum for teaching, which encompasses all aspects of librarianship. We are responsible for managing information by selecting, organizing, providing access to, and preserving physical and online information resources, and we take responsibility for assisting and educating others in the effective utilization of such resources. We contribute to the growth and progress of the discipline of library and information science through scholarship, and we serve our colleagues, peers, and community through professional service activities.

2022-23 Faculty/Staff

The following is the department's faculty and staff as of the publication date of this catalog. This list will not be updated again until the next catalog is published in July.

Course Descriptions - Undergraduate

Accountancy (ACC) - Courses

Courses

ACC 221 Cr.3

Accounting Principles I

An introduction to accounting as an information system. Emphasis is on reporting to external constituencies: investors and creditors. Topics include recording economic activities of the firm and the resultant financial reports, time value of money concept and its applications to financial reporting. Prerequisite: students must have successfully completed a minimum of 12 credit hours; only open to CBA majors or when required by another major/minor. Offered Fall, Spring, Summer.

ACC 222 Cr.3

Accounting Principles II

Emphasis is on reporting to internal constituencies: managers in all functional areas of the firm. An introduction to accounting principles used to prepare internal financial reports used for management decision-making. Topics include cost determination and flow, cost-volume-profit analysis, absorption and variable costing, capital budgeting, and cash flow analysis. Prerequisite: ACC 221 completed with a grade of "C" or better. Offered Fall, Spring, Summer.

ACC 235 Cr.3

Survey of Accounting

This course covers basic principles and procedures of financial and managerial accounting. Financial accounting topics include financial statements, the impact of transactions, and financial statement analysis. Managerial accounting topics include product costing, pricing, cost-volume-profit analysis, and budgeting. Prerequisite: students must have successfully completed a minimum of 12 credit hours. Not open to students in the College of Business Administration. Offered Occasionally.

ACC 301 Cr.3

Taxation for Non-Accountants

An introduction to the basic concepts of many types of taxes affecting the individual with primary emphasis placed on federal income tax. Selected other taxes studied include property taxes, sales taxes, payroll taxes, gift and estate taxes. Prerequisite: admission to business. Course does not satisfy accounting major requirements. Students may not earn credit for the accounting minor in both ACC 301 and ACC 330. Offered Occasionally.

ACC 311 Cr.3

Intermediate Accounting I

The first course in the financial accounting course sequence, this course is designed for students considering an accounting major or minor. This course involves the intensive study of both theory and practice, as they relate to the preparation and analysis of the balance sheet, income statement, retained earnings statement, and statement of cash flows. Additional specific topics include receivables, inventory, fixed assets, and intangibles. Prerequisite: ACC 221; admission to business or declared accountancy major/minor. Offered Fall, Spring.

ACC 312 Cr.3

Intermediate Accounting II

An extension of the theory and application of accounting principles involved in the financial analysis of liabilities and stockholder's equity of the accounting entity. Problem areas in accounting and financial reporting are emphasized. Prerequisite: ACC 311; admission to business. Offered Fall, Spring.

ACC 313 Cr.3

Intermediate Accounting III

A continuation of ACC 311 and ACC 312 with an emphasis on more complex intermediate financial accounting topics. Includes a review of investments, derivatives, revenue recognition, pensions, accounting errors, full disclosure, and the financial reporting implications of taxes. Prerequisite: ACC 312; admission to business. Offered Fall, Spring.

ACC 324 Cr.3

Practical Applications of International Financial Reporting Standards (IFRS)

This course provides students with exposure to the most commonly used International Financial Reporting Standards (IFRS). While this course is not intended to be a comparison to US GAAP, certain of the IFRS will be addressed in the context of US GAAP to demonstrate how the two bases are similar and how the two bases differ. IFRS is now the primary or alternate basis of financial accounting and reporting in more than 100 countries and is tested on both the CPA and CFA examinations. Prerequisite: ACC 311. This course is not open to students who have earned credit in ACC 400 (IFRS) or ACC 422. Offered Spring.

ACC 325 Cr.3

Cost Accounting

The emphasis of this course is on reporting to internal constituencies, such as upper management, operations, marketing, purchasing, human resources and others. It extends and enhances the students' exposure to management accounting theory and practice related to planning, directing and controlling business activities. Topics include cost allocation techniques, budgeting and variance analysis, strategic cost and activity based management using monetary and non-monetary measures. Prerequisite: ACC 222, STAT 145; admission to business. Offered Fall, Spring.

ACC 327 Cr.3

Accounting Information Systems

Procedures and problems in system design applied to the financial operations of a business and the role of the computer in processing financial information. Topics covered are responsibility accounting systems, inventory systems, sales analysis systems, and internal control. Prerequisite: ACC 311; IS 220; admission to business or information systems minor. Offered Fall, Spring.

ACC 330 Cr.3

Individual Income Taxation

The course examines tax principles and procedures that form a basis and foundation for the determination and computation of federal income tax liability for individual taxpayers. Prerequisite: ACC 311; admission to business. Offered Fall, Spring.

ACC 338 Cr.3

Principles of Fraud Examination

This course explores the various aspects of fraud prevention and detection, including the psychology/sociology of fraud, elements of fraud, types of fraud, use of accounting controls to prevent fraud, and methods of fraud detection. Additional topics include an analysis of evidence, document examination, body language and interviewing techniques. The course also provides a preparatory introduction to three of four sections of the Certified Fraud Examiner's (CFE) examination offered by the Association of Certified Fraud Examiners (ACFE). Prerequisite: a grade of "C" or higher in ACC 311. Offered Fall.

ACC 350 Cr.2

Income Tax Practicum

Field instruction and practical experience in federal and state income tax preparation. Repeatable for credit - maximum four. Prerequisite: minimum grade of "B" in either ACC 301 or ACC 330; admission to business. Pass/Fail grading. Offered Spring.

ACC 385 Cr.3

Accounting for Governmental and Not-for-Profit Entities

This course introduces students to financial accounting and reporting concepts associated with governmental and not-for-profit entities. Particular emphasis is placed on accounting and financial reporting for various typical transactions encountered in governmental and not-for-profit entities. The course covers regulatory issues as well as managerial and budgetary accounting principles and practices of governmental and not-for-profit entities. Prerequisite: ACC 311 with a grade of "C" or better; admission to the business program. Offered Fall.

ACC 400 Cr.1-3

Accountancy Forum

Emphasis will be on examination and study of current accountancy issues. Topics will vary from semester to semester. Repeatable for credit - maximum six. Prerequisite: admission to business; junior standing. Consent of instructor. Offered Occasionally.

ACC 418 Cr.3

Business Law for Accountants

The study of law as it relates to the professional accountant's need for an understanding of the legal environment. Among topics included are accountant's legal responsibility, federal security regulation, antitrust laws, employer-employee relationship, bankruptcy, forms of business organization, estates and trusts, commercial paper, contracts, sales, real estate and ethics. Prerequisite: BLAW 205; senior standing; accountancy major; admission to business. Offered Fall, Spring.

ACC 421 Cr.3

Advanced Accounting

Principles and theories of financial accounting and reporting for consolidated groups of entities, state and local governmental entities, and partnership entities. A majority of this course relates to consolidated groups of entities including translating foreign exchange transactions and consolidation of foreign operations. Prerequisite: ACC 313; junior standing; admission to business. Offered Fall, Spring.

ACC 430 Cr.3

Taxation II

A study of tax law affecting different forms of business entities. This course will include the preparation of various federal business income tax returns. Prerequisite: ACC 330; junior standing; admission to business. Offered Fall, Spring.

ACC 438 Cr.3

Principles of Auditing

Introduces the student to auditing, attestation, and assurance services. Topics include: client acceptance, audit planning, client internal control systems, audit risk, materiality, audit evidence, audit sampling, audit documentation, engagement quality control, professional ethics, legal liability, and the audit, attestation or assurance report issues by the auditor. The sources of authoritative standards and interpretations addressed in the course include: Audit Standards issued by the Public Company Accounting Oversight Board applied to clients that are required to report to the United States Securities and Exchange Commission, Statements on Auditing Standards for all other clients, and the Code of Professional Conduct issued by the American Institute of Certified Public Accountants. Prerequisite: STAT 145, ACC 313, ACC 327; junior standing; admission to business. Offered Fall, Spring.

ACC 450 Cr.1-12

College of Business Administration Internship

The internship program provides an opportunity for students in the College of Business Administration to participate in an approved program with a cooperating business, governmental, or civic organization for usually 15 weeks of their undergraduate work. For additional information, see the internship section in the College of Business Administration part of the catalog. Repeatable for credit. ACC 450 cannot be used to satisfy the ACC major requirements. Prerequisite: cumulative GPA of at least 2.50; ACC 221, ACC 222; BLAW 205; ECO 110, ECO 120, ECO 230; FIN 355; IS 220; MGT 308; MKT 309; admission to business. Consent of department. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

ACC 499 Cr.1-3

Independent Study

Individual readings or research under the guidance of a staff member. Open to selected advanced students who have excellent records in the department. Repeatable for credit - maximum six. Prerequisite: admission to business. Consent of instructor. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

Anthropology (ANT) - Courses

Courses

+ANT 101 Cr.3

Human Nature/Human Culture

This course provides an overview of the four subfields of anthropology: physical anthropology, archaeology, cultural anthropology, and linguistic anthropology. The course will focus on how anthropologists seek to understand what it means to be human by examining how people are biologically, culturally, and socially similar and different around the world. We will cover multiple aspects of the human experience, including human evolution and biological diversity, primates and hominids, domestication and subsistence practices, marriage systems, sex and gender norms, religious beliefs, and linguistic diversity. Offered Annually.

+ANT 102 Cr.4

Introduction to Biological Anthropology

This course introduces the basic fields of biological anthropology: population genetics, human osteology, primatology, pale anthropology, and forensics. The class provides a substantive framework for learning about the biological diversity of the human species through scientific inquiry. The foundations of evolutionary theory and the fossil evidence for human evolution are also presented. Lect. 3, Lab. 2. Offered Annually.

ANT 195 Cr.3

Introduction to Cultural Anthropology

This course examines the behavior and customs of people throughout the world. Students will gain a better understanding of the variation of human thought and behavior and how anthropologists analyze the vast range of cultural differences. We will describe the patterns of marriage, family organization, gender and sexuality, political behavior, economic systems, subsistence patterns, religion and ritual, etc. of societies all over the world. We will also examine some of the global issues that societies contend with, such as development, transnational migration, and the economic and political ramifications of colonization. Offered Annually.

ANT 196 Cr.3

Introduction to Linguistic Anthropology

This course is an introduction to linguistic anthropology. Language is central to enculturation, whether it comes in the form of speech, writing, gesture, or style. We will start with a four-field perspective, examining the origins of human communication, early writing systems, cultural differences in language socialization, and how people use language now. From there, we will focus on the role language plays in people's social lives. Topics include gesture, literacy and global media, linguistic variation, language and identity, multilingualism, and language change and loss. Offered Annually.

+ANT 202 Cr.3

Contemporary Global Issues

This course will offer a contemporary multi-disciplinary perspective regarding the major issues and trends confronting the global society as it enters the 21st century. Emphasis will be given to a critical review and assessment of the origin and present condition of the plethora of situations and problems affecting modern global society. The student will also learn to critically evaluate current and future events. The course will incorporate the views and approaches of the following disciplines: anthropology, economics, geography, history, political science, and sociology. Students may only earn credit in one of the following: ANT 202, GEO 202, HIS 202, POL 202, SOC 202. Offered Annually.

+ANT 212 Cr.3

Search for Economic Justice

Using humanistic and social scientific approaches, students will explore movements for economic empowerment as a critical dimension of justice in the increasingly global world. Through a mixture of face-to-face, online, and experiential methods, students will examine connections between the individual and larger systems and between the local and the global. They will critically analyze economic and political structures and movements as they pertain to gender, race, ethnicity, and class. The course will be informed by the perspectives of English, economics, political science, anthropology, and women's, gender, and sexuality studies. Students may only earn credit in one of the following: ANT 212, ECO 212, ENG 212, PHL 212, POL 212. Offered Annually.

ANT 215 Cr.3

Refugees, Displaced Persons and Transnational Communities

This course explores the lives of refugees, displaced persons and the emergence of transnational communities. Emphasis is placed on the causes of refugee movements; policies and practices concerning the status and rights of refugees; and asylum and resettlement in other countries. A comparative approach is used to draw attention to how people cope with displacement and transnational migration and establish new roots in the country of resettlement. Offered Occasionally.

ANT/ARC 304 Cr.3

Hunter and Gatherer Societies

This course focuses on recent human societies throughout the world that have lived by hunting and gathering wild resources. The specific subsistence strategies of a wide range of hunter-gatherer groups are examined relative to their technology, social structure, territory, demography and interaction with food producers. The conclusion of this course will consider hunter-gatherers in prehistory. (Cross-listed with ANT/ARC; may only earn credit in one department.) Offered Occasionally.

ANT/ARC 305 Cr.3

Indigenous Agricultural Societies: Past and Present

This course examines the origins, structure, social organization, and operation of indigenous agricultural societies. A central focus of the course is an inquiry based, sequential examination of geographically related couplets involving (1) contemporary indigenous agricultural tribal societies and (2) archaeological excavation reports. The utility of the ethnographic record as a guide to interpretation of the archaeological record is evaluated. (Cross-listed with ANT/ARC; may only earn credit in one department.) Offered Occasionally.

ANT 307 Cr.3

International Development and Culture Change

In an increasingly global world, what does it mean for cultures to change? What does it mean for cultures to stay the same? This course examines what "development" means to people in different cultures, and how the concept of development is itself a product of colonialism, the Cold War, and the current focus on what has been called the neoliberal global economy. The goals of the course are 1) to provide students with a comprehensive study of what economic, social, cultural, and political development has meant over time, and 2) to illustrate the benefits, limitations, and consequences of "progress" and "development" in the lives of people all over the globe. Course examples will come from topics such as conservation, sustainability, and the environment; the preservation of indigenous peoples' ways of life; and tourism and its effects in a global world; gender and development; disaster response and reconstruction; and the roles of social movements, development aid, and non-governmental organizations in international development. Offered Occasionally.

ANT/HIS 312 Cr.3

Peoples and Cultures of Eastern Europe and the Former Soviet Union

This is a survey course that explores how people in Eastern Europe and the former Soviet Union have experienced the transition from socialism to postsocialism and beyond. Within the framework of cultural anthropology, we will examine the major concerns of postsocialism - including how people understand the role of the government, what it means to be a citizen, and how they view themselves as members of communities - in order to gain a better understanding of how people experience, manage, and challenge the broad changes that have occurred in the political, economic, and social systems. More importantly, we will focus on how people have redefined what they value in life, what it means to be a "good" person, and what it means to be "postsocialist" in light of these changes. (Cross-listed with ANT/HIS; may only earn credit in one department.) Offered Occasionally.

ANT 320 Cr.3

Rites, Rituals and Ceremonies

This course examines the roles of rituals in family, community and national life. It introduces students to a variety of ritual traditions and symbolic practices from around the world. In the process, students will learn about the different approaches to studying, analyzing and interpreting the significance of rituals. Offered Every Third Semester.

ANT 321 Cr.3

Images, Visual Culture and Anthropology

This course engages students in the practices of looking and encourages them to read into the meanings behind images. By combining movies, still photography, advertisements and illustrated magazines with class readings, discussions and assignments, students will learn to see the complex roles images play in modern society; how non-Western people have historically been represented in popular culture; and how experiences of the visual are informed as well as complicated by social, cultural and political histories. Offered Every Third Semester.

ANT 323 Cr.3

Anthropology of Childhood and Youth

This course provides an overview of the anthropology of childhood and youth, emphasizing how these concepts both vary and are similarly-shaped cross-culturally. The texts draw upon cultural studies, ethnography, feminist anthropology, child development, and psychological anthropology. We will explore topics such as child-rearing practices, the role of peers and family, gender roles and expectations, rites of passage, youth subcultures, and youth engagement with globalization and technology. In our discussions, we will also consider how children and young people are active agents in shaping the world around them and conversely, how they are shaped by their worlds. Offered Occasionally.

ANT/ARC 325 Cr.3

North American Anthropology and Archaeology

An intensive survey of the cultures of North America north of the Rio Grande, beginning with arrival of the first people in the New World, through the early period of European contact, ending in the mid-nineteenth century. Cultural adaptation and change within each major ecological region will be considered. This course will not be considering contemporary Native American issues. (Cross-listed with ANT/ARC; may only earn credit in one department.) Offered Occasionally.

ANT/ARC 335 Cr.3

Human Skeletal Anatomy and the Anthropological Study of the Dead

This course is designed for students majoring in archaeological studies or related fields. The focus of this course is a detailed study of the human skeleton. Each student will be required to learn the anatomy of the human skeleton in detail. Also considered are methods of determining an individual's age, ethnic origins, sex, and stature from skeletal remains. The final three weeks of the course will be concerned with anthropological interpretation of the dead. Offered Occasionally.

ANT/ARC 346 Cr.3

Ethnoarchaeology and Experimental Archaeology

Archaeology isn't only about excavations: Since the 1960s, archaeologists have also examined aspects of life in the present as a way to better interpret material culture found at ancient sites. Ethnoarchaeology uses ethnographic field methods among modern peoples to develop informed hypotheses about life in the past. Experimental archaeology uses controlled scientific experiments to develop models about past behaviors including tool use, pottery production, etc. This course will cover both of these "middle-range" approaches, and will require participation in hands-on ethnoarchaeological and experimental class projects. Prerequisite: ANT 101 or ANT 195 or ANT/SOC 202 or ARC 100 or ARC 196 or ARC 200. (Cross-listed with ANT/ARC; may only earn credit in one department.) Offered Occasionally.

ANT 351 Cr.3

Peoples and Cultures of Southeast Asia

Southeast Asia is a region of immense diversity with a long history of cultural mixing and blending. This class is a journey across this vast landscape to learn about the stories behind its ongoing histories, the dynamic influences on its changing cultures, and the vibrant lives of its peoples. Issues that matter to the everyday life of Southeast Asians are explored in relationship to national, regional and global trends. Offered Occasionally.

ANT/ARC/HIS 353 Cr.3

Maya Civilization

The course presents an overview of the Maya culture located in southern Mexico and Central America. The class is organized chronologically into several sections that focus on the origins, adaptations to various environments, social, political, and religious organizations, and the belief systems of the Maya beginning at around 3000 BC. Emphasis will be on Pre-Hispanic Maya; will also explore life ways of contemporary Maya people. (Cross-listed with ANT/ARC/HIS, may only earn credit in one department.) Offered Summer.

ANT 354 Cr.3

Peoples and Cultures of Latin America

This survey course presents students with an anthropological perspective on contemporary peoples living in Central and South America, parts of the Caribbean, and Mexico. The course starts with a brief introduction to Latin American pre-histories, exploring how the past influences present-day societies. The course then examines particular cultural aspects of the region overall, such as patterns of subsistence, religion and ideology, social movements, politics, social organization, race and ethnicity, gender and gender relations, popular culture and the media, war and violence, and tourism and development. Discussions throughout the course will also focus on Latin Americans living abroad and how Latin American cultures are shaping, and shaped by, other cultures around the globe. Offered Occasionally.

+ANT/RGS 362 Cr.3

Hmong Americans

This is an introductory course to Hmong American history, culture, and contemporary life. The course reviews Hmong history within the context of U.S. foreign policy in Southeast Asia from 1945 to 1975 and examines the sociocultural transformations that have been taking place in Hmong American communities across the U.S. since 1976. (Cross-listed with ANT/RGS; may only earn credit in one department.) Offered Occasionally.

ANT 366 Cr.3

Anthropology of Food

Cross-cultural practices and beliefs about the production, consumption, and distribution of food vary widely. This course examines food in a historical, social, and cultural context, focusing on the topics such as subsistence patterns and cultural patterns of food preparation and consumption; contemporary diets and the increasing prevalence of obesity, diabetes, and heart disease; cultural practices that restrict food intake or dictate food taboos; the globalization and "McDonaldization" of food; and others. The goal of the course is to provide students with theoretical and methodological tools to analyze food as a symbolic, political, and cultural artifact in today's world. Offered Annually.

ANT 370 Cr.3

Medical Anthropology

Understandings of "health" and "illness" vary widely around the world. This course examines how an individual's interactions with the cultural and physical environment influence the experiences of health and illness. The class begins with an overview of the development of medical anthropology as a subfield, with attention to its relationship with other disciplinary approaches to questions of health, medicine, and disease. Course concepts are illustrated using international examples of health and illness, such as shamanism and shamanic healing; complementary and alternative medicine in the US; hospital birth versus midwifery; and the link between the individual and society in the healing process. The second part of the course focuses on biocultural perspectives on health, including the effects of prehistoric and historic life-ways and disease epidemics on the body. The third part of the class examines the politics of health, paying particular attention to the effects of race, ethnicity, gender, and class on health status and treatment. The final section of the course delves into the application of medical anthropology in the field of international development. Offered Occasionally.

+ANT 375 Cr.3

Language, Power, and Inequality

This course will examine how our ideas about language intersect with differences in power and social inequality in the United States. These ideas include how we think people "should" speak, who speaks the "best," and which language varieties are valued. Focusing on the role of institutions and their effects on minority language speakers, we will explore issues such as language subordination, stereotypes of US regional dialects and accents, "mixed" languages, "mock" languages, political correctness, and multilingualism. This class will also examine how our ideas about language are used to construct and reflect social boundaries, which can affect people's social and political opportunities. Offered Occasionally.

ANT/ARC 395 Cr.1

Graduate Preparation Seminar

Third year students who are interested in pursuing a graduate degree in anthropology or archaeology have many things to consider. This seminar is designed to help students determine what research they intend to pursue after graduation, what graduate schools are particularly well suited to meet their research needs, how to target and apply to certain programs, and how to develop an impressive resume. This seminar will also serve to prepare students who do not intend to continue their education in graduate school for employment opportunities upon graduation. Prerequisite: archaeology major; archaeology major: cultural anthropology emphasis; junior standing. (Cross-listed with ANT/ARC; may only earn credit in one department.) Pass/Fail grading. Offered Fall.

ANT 399 Cr.3

Anthropology Forum

Investigation of areas and topics of current anthropological interest not covered in the regular curriculum ranging from local to transnational issues. Repeatable for credit - maximum 12. Offered Occasionally.

ANT 401 Cr.3

Ethnographic Methods

Ethnography is a central method in anthropology. This course will provide students with the basics of ethnographic research through the use of small, hands-on group projects. In addition to reading texts on ethics, the research process, and the role of the researcher, we will move through all of the phases of ethnographic research as students gain skills in a variety of methods. Projects will cover preparing to do research, data collection, processing and analyzing data, and presenting research findings. The goal of this course is to teach students skills that can be applied to a variety of careers, as well as to future ethnographic research projects. Prerequisite: ANT 101 or ANT 195 or ANT 202 or ANT 212. Offered Occasionally.

ANT 409 Cr.1-3

Readings and Research in Anthropology

Directed readings or research under the supervision of an instructor. Repeatable for credit - maximum six. Prerequisite: junior standing. Consent of instructor. Offered Annually.

ANT 450 Cr.1-15

Internship in Anthropology

This course is an academically relevant field experience for majors and minors in anthropology. The field experience will be supervised by the anthropology staff. No more than six credits may be applied to the cultural anthropology emphasis and no more than three credits to the anthropology minor. Repeatable for credit - maximum 15. Prerequisite: junior standing with at least a 2.50 GPA. Consent of department. Pass/Fail grading. Offered Annually.

ANT 454 Cr.3

Historical and Theoretical Approaches in Anthropology

This course examines the history of anthropological thought since the beginning of the discipline. The course will specifically look at theories and theorists in anthropology using a historical perspective, demonstrating the ways that social events and cultural forces have helped shape theoretical and methodological paradigm shifts throughout the history of the discipline. Students will also be required to analyze ethnographies as cultural artifacts by examining the strategies anthropologists use to represent cultures and their role in fieldwork. Prerequisite: ANT 101 or ANT 202 or ANT 212. Offered Spring.

ANT/ARC 479 Cr.1-2

Archaeology/Anthropology Laboratory Assistant

An opportunity to assist in the preparation and instruction of an archaeology/anthropology laboratory. Students will be expected to assist in preparation of course materials, demonstrate proper techniques, and evaluate student performance. Repeatable for credit - maximum four. Not applicable to the archaeology major or anthropology minor. (Cross-listed with ANT/ARC, may only earn credit in one department.) Consent of instructor. Pass/Fail grading. Offered Annually.

ANT 495 Cr.3

Senior Thesis in Cultural Anthropology

This course is the last course in the archaeological studies major with an emphasis in cultural anthropology course sequence and is normally taken during the student's final year. The course is designed to assist students in fulfilling the graduation requirement of completing a senior thesis in their archaeological studies major: cultural anthropology emphasis. Prerequisite: ANT 195; senior standing. Consent of instructor. Offered Spring.

ANT 496 Cr.3

Honors Thesis in Cultural Anthropology

This is the capstone course for archaeological studies majors with an emphasis in cultural anthropology enrolled in the Cultural Anthropology Honors Program. Honors students take this course in lieu of ANT 495, typically during their final year. The course is designed to assist the student in completing a baccalaureate thesis that will be presented in hard copy as well as verbally at the Annual Spring Research Colloquium for students completing their archaeological studies major: cultural anthropology emphasis. Prerequisite: ANT 195; senior standing. Consent of instructor. Offered Spring.

ANT 499 Cr.2-3

Seminar in Anthropology

Intensive study of some specific area or problem of anthropology. Repeatable for credit. Prerequisite: maximum 12 credits may be earned between ARC 498 and ANT 499. Consent of instructor. Offered Occasionally.

Arabic (ARA) - Courses

Courses

ARA 101 Cr.4

Elementary Arabic I

This course will acquaint students with the working vocabulary, dialogue skills, and pronunciation needed for elementary Arabic reading and writing. Linguistic development will include basic listening skills, elementary conversation, appreciation of the many Arabic dialects, and knowledge of Arab culture. Offered Fall.

+ARA 102 Cr.4

Elementary Arabic II

This is the second semester of first year Arabic. This course is designed to reinforce and build upon what was covered during the first semester. The 5Cs of communication, culture, connections, comparisons, and communities are at the center of the course. The course will be taught using a communicative approach, meaning that our focus is on real-world situations in which you can use the language in meaningful ways. Prerequisite: ARA 101. Offered Spring.

+ARA 201 Cr.4

Intermediate Arabic I

This course will be a continuation of the first-year, introductory courses in spoken and written Arabic. Prerequisite: ARA 102. Offered Fall.

+ARA 202 Cr.4

Intermediate Arabic II

This course will continue to develop the skills previously acquired and increase knowledge about syntactical and morphological structures of Modern Standard Arabic. The overall goal of this course is to increase students' proficiency level and enable students to do more with the Arabic language. Successful completion of this course would provide students with the groundwork for rapidly advancing in the Arabic language and the tools for further study and research in a formal classroom setting or on their own. Prerequisite: ARA 201. Offered Spring.

Archaeology (ARC) - Courses

Courses

+ARC 100 Cr.3

Archaeology: Discovering Our Past

This course is an introduction to the fascinating world of archaeology designed as a detailed exploration of the methods used to learn about past human life before written records. Each student will be involved in the process of discovering our past. Offered Annually.

ARC 101 Cr.1

Orientation to the Archaeological Studies Major

This one credit seminar provides students with an orientation to the archaeological studies major and the cultural anthropology emphasis. It is designed for second semester freshmen and sophomore level students. It is also appropriate for transfer students at any level. This course provides information regarding the successful completion of the archaeological studies major and/or cultural anthropology emphasis. In addition, students will be engaged in various tasks designed to identify and/or clarify career goals, increase understanding of archaeology and anthropology as applied fields, and familiarize themselves with tools for conducting research. Pass/Fail grading. Offered Occasionally.

ARC 196 Cr.1

Archaeology: An Introduction to Lab and Field Methods

This course is a laboratory and field learning component to the course ARC 100. The course provides important hands-on learning opportunities for archaeology majors to further introduce and reinforce topics introduced in ARC 100. Lab sessions provide foundational knowledge in the processing and analysis of archaeological finds and field records. Field excavation sessions provide students basic training in the methods and techniques for the recovery and interpretation of archaeological evidence from archaeological sites. Prerequisite: archaeology majors take concurrently with ARC 100. Offered Fall.

+ARC 200 Cr.3

World Archaeology: Origins and Development of Human Culture and Society

The complex global institutions that make up our modern world have antecedents going back thousands of years. This survey course explores the origins of these cultural institutions and their development in Africa, the Middle East, Europe, Asia and the New World from an archaeological perspective. This course also examines the intimate interconnections between human culture, technology, and the natural environment, and it explores the long-term impact of human behavior on the environment over the last several thousand years. Specific themes explored include the biological origin of our species, the first use of tools and the development of artistic expression, human response to climate change, the origins and development of agriculture and animal domestication, the advent of writing, history and science, the rise of urbanism and state level society, and the lasting cultural impacts of early global interactions among the great civilizations of the ancient world. Offered Fall, Spring.

ARC 250 Cr.3

Museum Studies

This introductory course provides a history of museums, their goals and methods, administration, curation and exhibit techniques. Participants will be taking field trips to museums. Offered Occasionally.

ARC 280 Cr.3

The Incas and their Ancestors: Archaeology of the Andes

This course reviews the prehistory and early historic periods of the Andean regions of South America. Emphasis will be placed on tracing the rise of civilization in the Andes which culminated in the Inca Empire and the extraordinary events that led to the conquest of the Inca by the Spanish conquistadors. Topics to be explored include the controversial evidence of early man in South America, the role of the ocean and mountains in shaping pre-hispanic life, the origin of domesticated plants and animals, and the rise of the complex societies of Moche, Tiwanaku, Wari, Chimú, and of course, the Inca. Offered Occasionally.

ARC/HIS 295 Cr.3

Pyramids, Temples and Towns! The Archaeology of Ancient Egypt

This course is a survey of the archaeology of Ancient Egyptian civilization from an anthropological perspective and examines the Neolithic through Roman periods, ca. 5000 BC - AD 285. In this course, we will investigate the rise and development of Egyptian culture by examining selected archaeological sites and the material remains left behind by the ancient Egyptians. Using these materials, we will address specific topics of Ancient Egyptian civilization including the formation of the centralized state, sacred vs secular space, royal and private mortuary practices, urbanism, religion, roles of women in society, everyday life, history of Egyptian archaeology, recent discoveries, and future directions in the archaeology of Egypt. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Every Third Semester.

ARC 300 Cr.3

Cultural Resources Management

Since the 1980's American archaeology has shifted from a strictly academic profession to a more practical occupation in which consulting and the implementation of legislation and public policy are major components. In fact, today Cultural Resource Management (CRM) is the dominant force in archaeology in the United States. The primary goals of this class are to provide students with an appreciation of the importance of CRM and an understanding of the legislation that drives it, as well as exposure to the everyday practices of archaeologists working in a CRM context. Prerequisite: ARC 196 recommended. Offered Occasionally.

ARC/HIS 302 Cr.3

Egyptian Hieroglyphs: The Language and Culture of Ancient Egypt

Ever wonder what all those birds, snakes and other symbols on Ancient Egyptian monuments mean? In this course you will find out! This course is an introduction to the language and culture of Ancient Egypt. We will learn to read the hieroglyphic script used by the Egyptians to record aspects of their culture and daily lives for over 3,000 years. While learning the basics of Middle Egyptian grammar, the classical form of the language, we will explore aspects of Egyptian culture through their own words. Through translating sentences and basic texts, we will experience first-hand the classical form of the language used for writing everything from business receipts and letters, to historical documents and literary works, to esoteric theological texts which record details of their belief system. Topics to be covered are the origins of writing in Egypt, historical development of the language, daily religion, beliefs in the afterlife, the family, social structure, literature and the role of writing in Egyptian culture. From students of archaeology or linguistics, history or modern languages, or anyone who has ever seen an artifact from Ancient Egypt and wanted to know what the hieroglyphs say, this class has something for everyone! No prior knowledge of ancient Egypt or Egyptian language is needed or required, only a desire to gain insight into the thoughts of people who lived thousands of years ago. Offered Occasionally.

ARC 303 Cr.3

Archaeology Lab Methods

Taking a hands-on approach to analyzing and interpreting archaeological remains, the class will integrate lectures with demonstrations, experiments, and supervised laboratory projects. Study will focus on the potential for interpreting human life ways and adaptations to the environment from stone tools, ceramics, floral, and faunal remains. Prerequisite: ARC 100 or ARC 196 or ANT 101. Offered Occasionally.

ARC/ANT 304 Cr.3

Hunter and Gatherer Societies

This course focuses on recent human societies throughout the world that have lived by hunting and gathering wild resources. The specific subsistence strategies of a wide range of hunter-gatherer groups are examined relative to their technology, social structure, territory, demography and interaction with food producers. The conclusion of this course will consider hunter-gatherers in prehistory. (Cross-listed with ANT/ARC; may only earn credit in one department.) Offered Occasionally.

ARC/ANT 305 Cr.3

Indigenous Agricultural Societies: Past and Present

This course examines the origins, structure, social organization, and operation of indigenous agricultural societies. A central focus of the course is an inquiry based, sequential examination of geographically related couplets involving (1) contemporary indigenous agricultural tribal societies and (2) archaeological excavation reports. The utility of the ethnographic record as a guide to interpretation of the archaeological record is evaluated. (Cross-listed with ANT/ARC; may only earn credit in one department.) Offered Occasionally.

ARC 311 Cr.3

European Prehistory

This course introduces students to the rich archaeological heritage of Europe from its initial colonization by our hominid ancestors to the end of the Iron Age. Topics to be explored include the evolution and dispersal of early hominids and modern humans, hunter-gatherer societies, the adoption of agriculture, the development of social complexity, and the rise of Europe's first civilizations. Offered Occasionally.

ARC 320 Cr.3

Historical Archaeology

The focus of this course is historical archaeology. This discipline combines an archaeological evaluation of material remains from the historic past with an examination and analysis of historical sources. In the New World, historical archaeologists work on a broad range of sites that document early European settlement and its effects on Native American peoples, wars fought on American soil, the subsequent spread of the Euro-American frontier, and later periods of urbanization and industrialization. Historical archaeologists seek to understand the past from an anthropological perspective and appreciate how broad historical developments have shaped modern society. In this class, we will explore all these aspects of historical archaeology in the New World and abroad. Prerequisite: ARC 196. Offered Occasionally.

ARC/ANT 325 Cr.3

North American Anthropology and Archaeology

An intensive survey of the cultures of North America north of the Rio Grande, beginning with arrival of the first people in the New World, through the early period of European contact, ending in the mid-nineteenth century. Cultural adaptation and change within each major ecological region will be considered. This course will not be considering contemporary Native American issues. (Cross-listed with ANT/ARC; may only earn credit in one department.) Offered Occasionally.

ARC/HIS 331 Cr.3

The Ancient Greek World

A historical and archaeological survey of the ancient Greek world (Greece proper, the Aegean Islands, southern Italy, western Turkey). Periods discussed will include Cretan (Minoan), Mycenaean, Archaic, Classical, Hellenistic, and Early Greek Christian. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

ARC/HIS 332 Cr.3

Ancient Rome and the Mediterranean

A historical and archaeological survey of the ancient Mediterranean area (with emphasis on the Italian peninsula) from the founding of the city of Rome to the collapse of the western Roman Empire in the fifth century ACE. Periods discussed will include: Italy in the Neolithic period, the founding of Rome, Etruscan Domination, the Roman Republic, the Roman Principate/Empire, and the advent of Roman Christianity. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

ARC/ANT 335 Cr.3

Human Skeletal Anatomy and the Anthropological Study of the Dead

This course is designed for students majoring in archaeological studies or related fields. The focus of this course is a detailed study of the human skeleton. Each student will be required to learn the anatomy of the human skeleton in detail. Also considered are methods of determining an individual's age, ethnic origins, sex, and stature from skeletal remains. The final three weeks of the course will be concerned with anthropological interpretation of the dead. Offered Occasionally.

ARC/HIS 340 Cr.3

Origins of Cities

This course examines the origins and development of urban life. Students will first explore, from an anthropological perspective, the character of modern cities. Students will next examine the earliest cities in the Old and New Worlds, and comparatively explore the varied ecological, social, political, and demographic processes associated with urbanization in various ancient civilizations (Mesopotamia, Egypt, Indus Valley, China, Andes, and Mesoamerica). While the focus of this course is on archaeological cities, it draws heavily on ethnographic and sociological studies of urban forms. The purpose of this course is to provide students with a comparative understanding and appreciation of urban life and its long history. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

ARC 345 Cr.3

Zooarchaeology

This course is an introduction to the subdiscipline of zooarchaeology. It is a hands-on, experiential learning class in which students will develop skills to analyze animal bones from archaeological contexts, including species and element identification, quantification methods, mortality profile construction, and pathology assessment. Students will apply these techniques to address broader archaeological issues, such as hunting and herding strategies, origins of animal domestication, seasonality assessment, environmental reconstruction, and social/ritual use of animals and their products. Offered Occasionally.

ARC/ANT 346 Cr.3

Ethnoarchaeology and Experimental Archaeology

Archaeology isn't only about excavations: Since the 1960s, archaeologists have also examined aspects of life in the present as a way to better interpret material culture found at ancient sites. Ethnoarchaeology uses ethnographic field methods among modern peoples to develop informed hypotheses about life in the past. Experimental archaeology uses controlled scientific experiments to develop models about past behaviors including tool use, pottery production, etc. This course will cover both of these "middle-range" approaches, and will require participation in hands-on ethnoarchaeological and experimental class projects. Prerequisite: ANT 101 or ANT 195 or ANT/SOC 202 or ARC 100 or ARC 196 or ARC 200. (Cross-listed with ANT/ARC; may only earn credit in one department.) Offered Occasionally.

ARC 350 Cr.1-6

Independent International Research in Archaeology

An individually designed, directed archaeological research project in an international setting dealing with a significant field, laboratory, museum or archival/library research problem. The course permits in-depth, independent research using international sources, facilities, and resource persons. Requires a high degree of motivation and the ability to work independently. Repeatable for credit - maximum six. Only three credits may apply to the major. Prerequisite: junior standing. Consent of department. Offered Occasionally.

ARC/ANT/HIS 353 Cr.3

Maya Civilization

The course presents an overview of the Maya culture located in southern Mexico and Central America. The class is organized chronologically into several sections that focus on the origins, adaptations to various environments, social, political, and religious organizations, and the belief systems of the Maya beginning at around 3000 BC. Emphasis will be on Pre-Hispanic Maya; will also explore life ways of contemporary Maya people. (Cross-listed with ANT/ARC/HIS, may only earn credit in one department.) Offered Summer.

ARC/HIS 365 Cr.3

Ancient Iraq

A historical and archaeological survey of ancient Iraq (Syro-Mesopotamia) from its prehistoric origins in the neolithic period to the Seleucid period. Ethnic groups discussed will include the Sumerians, Akkadians, Babylonians, Assyrians, Kassites, Amorites, Chaldeans, and Elamites. Topics will include the rise of urbanism, cuneiform writing, religion, literature, displaced persons, gender relations, and social structure. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

ARC/HIS 366 Cr.3

Ancient Israel

A historical and archaeological survey of coastal Syria and Palestine from the neolithic period to the Roman conquest. Various ethnic groups discussed will include the Eblaites, Phoenicians, Philistines, Canaanites, Arameans, Israelites, Samaritans, and Judeans. Special emphasis will be placed on putting biblical history in its Palestinian context. Topics will include social structure, gender relations, religion, and literature. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

ARC/HIS 368 Cr.3

History of Babylonian Language and Culture I

This course is a survey of Babylonian history, culture, and language. Babylonian, was the most extensive of the cuneiform languages of the ancient Near East, was the language of the ancient Assyrians and Babylonians and was used for over two millennia. Students will study aspects of the history and culture of ancient Babylonia, as well as learn the fundamentals of Babylonian grammar and syntax, and the cuneiform writing system. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

ARC/HIS 369 Cr.3

History of Babylonian Language and Culture II

This course is a second semester survey of Babylonian history, culture, and language. Babylonian, the most extensive of the cuneiform languages of the ancient Near East, was the language of the ancient Assyrians and Babylonians and was used for over two millennia. Whereas the student studies grammatical forms and is introduced to the cuneiform writing system in the first semester, the student in the second semester will work with documents. Students will study aspects of the history and culture of ancient Babylonia in later periods, as well as read legal, economic, and literary texts in the original language. Prerequisite: HIS 368 or ARC 368. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

ARC/HIS 372 Cr.3

History of Women in the Ancient World

A history of the nature and status of women in the ancient world as derived from textual sources, including works of literature, private letters, economic documents, and tomb inscriptions. Areas studied will be Syro-Mesopotamia, Israel, Iran, Anatolia, Egypt, and the Mediterranean world. Also discussed will be the study of women as derived from archaeological sources. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

ARC/HIS 374 Cr.3

Ancient Turkey

An historical and archaeological survey of ancient Anatolia (the geographic name of Turkey) and surrounding regions (e.g., Syria and the Caucasus) from its prehistoric origins in the Neolithic period, the rise of urbanism, Assyrian mercantilism, Pre-Hittite cultures, the Hittite kingdoms, the Neo-Hittite states, Urartu, Phrygia, Lydia, Cimmerians, Medes, Persians, and various states in the Graeco-Roman period to the advent of Anatolian Christianity. Topics will include cuneiform writing, religion, literature, law, gender relations, and social structure. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

ARC/HIS 375 Cr.3

Iran before Islam

An historical and archaeological survey of ancient Iran and surrounding regions from prehistoric origins to the advent of Islam in the 7th century AD. Among the topics discussed will be: the rise of urbanism and writing at Proto-Elamite Susa, Elamite civilization in southwestern Iran, Medes, Scythians, and Persians in the Iron Age, the Persian Empire, as well as the Seleucid, Parthian, and Sassanian kingdoms of later antiquity. Emphasis will be on the study of primary sources in translation (Sumerian, Akkadian, Elamite, Old Persian, Greek, Latin, and Hebrew, amongst others). Topics will include cuneiform writing in Iran, religion, literature, gender relations, classical traditions about Iran, and social structure. (Cross-listed with ARC/HIS, may only earn credit in one department.) Offered Occasionally.

ARC/ANT 395 Cr.1

Graduate Preparation Seminar

Third year students who are interested in pursuing a graduate degree in anthropology or archaeology have many things to consider. This seminar is designed to help students determine what research they intend to pursue after graduation, what graduate schools are particularly well suited to meet their research needs, how to target and apply to certain programs, and how to develop an impressive resume. This seminar will also serve to prepare students who do not intend to continue their education in graduate school for employment opportunities upon graduation. Prerequisite: archaeology major; archaeology major: cultural anthropology emphasis; junior standing. (Cross-listed with ANT/ARC; may only earn credit in one department.) Pass/Fail grading. Offered Fall.

ARC/HIS 396 Cr.3

Ancient Syria

A historical and archaeological survey of ancient Syria and surrounding regions from prehistoric origins to the advent of the Roman conquest in the first century BC. Among the topics discussed will be the rise of urbanism and writing along the Euphrates River, religion, gender, social structure, and literature. Moreover, the student will study in translation the vast cuneiform archives from Ebla, Mari, Alalakh, Qattara, Nuzi, Emar, and Ugarit, to name a few. Furthermore, biblical, classical, and medieval sources concerning Syria in the first millennium BC will be studied. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

ARC 399 Cr.3

Archaeology Forum

Investigation of areas and topics of current archaeological interest not covered in the regular curriculum. Repeatable for credit - maximum 12. Offered Occasionally.

ARC 402 Cr.6

Field Methods in Archaeology

Practical application of the basic skills used in the excavation of archaeological sites, including surveying techniques, methods of excavation, compilation of field data, and laboratory analysis. Prerequisite: ARC 196. Consent of instructor. Offered Summer.

ARC 404 Cr.3

Environmental Archaeology

This course investigates the relationship between prehistoric human societies and their biotic communities. An array of techniques using plant and animal remains from archaeological contexts to reconstruct aspects of ancient environments, climates, and human subsistence patterns are examined. Applications of environmental data toward the understanding of human settlement and subsistence systems are discussed. Offered Occasionally.

ARC 409/509 Cr.1-3

Readings and Research in Archaeology

Directed readings or research under the supervision of an instructor. Repeatable for credit - maximum 12. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: ARC 200; junior standing. Consent of instructor. Offered Annually.

ARC 415 Cr.3

Advanced Research Applications in Archaeology

This course will provide advanced training in archaeological data collection and analysis, with focus on designing theoretically-rich analyses that can be applied to answering specific research questions. To this end, each semester will focus intensively on a single category of advanced analysis, such as lithic or ceramic materials analysis. Prerequisite: ARC 196 and ARC 303. Offered Occasionally.

ARC 445 Cr.3

Research Methods in Archaeology

This course is an introduction to a broad spectrum of research strategies available to archaeologists with a focus on quantitative methods. It is not a course in statistics. Rather, the course is intended to help students learn to be comfortable working with qualitative and quantitative data, and to be a sampler of commonly used quantitative methods in archaeology. Prerequisite: ARC 196. Offered Fall.

ARC 450 Cr.1-15

Internship in Archaeology

An academically relevant field experience for archaeology students. The experience will involve direct participation in excavation, laboratory analysis, or other aspects of archaeological science including museum work, supervised by an archaeologist or professional of a related discipline. Repeatable for credit - maximum 15. Only three credits can apply to the major. Prerequisite: junior standing; minimum 3.00 cumulative GPA. Consent of department. Pass/Fail grading. Offered Annually.

ARC 455 Cr.3

Historical and Theoretical Perspectives in Archaeology

This course reviews the practice of archaeology from its antiquarian beginnings through modern times. The goal of the course is to explore, from a historical perspective, the theoretical approaches that have been used by archaeologists to explain past human behavior. By exploring the development of archaeological thought through time, students will gain a deeper understanding of current theoretical approaches in archaeology. Prerequisite: ARC 196; junior standing. Offered Fall.

ARC/ANT 479 Cr.1-2

Archaeology/Anthropology Laboratory Assistant

An opportunity to assist in the preparation and instruction of an archaeology/anthropology laboratory. Students will be expected to assist in preparation of course materials, demonstrate proper techniques, and evaluate student performance. Repeatable for credit - maximum four. Not applicable to the archaeology major or anthropology minor. (Cross-listed with ANT/ARC, may only earn credit in one department.) Consent of instructor. Pass/Fail grading. Offered Annually.

ARC 489 Cr.3

Honors Thesis in Archaeology

This is the capstone course for archaeological studies majors enrolled in the Archaeology Honors Program. Honors students take this course in lieu of ARC 499, typically during their final year. The course is designed to assist the student in completing a Baccalaureate thesis that will be presented in hard copy as well as verbally at the Annual Archaeological Studies Spring Research Colloquium. Prerequisite: ARC 196; ARC 200; senior standing. Consent of instructor. Offered Spring.

ARC 498/598 Cr.1-3

Seminar in Archaeology

Intensive study of a specific area or problem of archaeology. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit - maximum 12 between ARC 498/598 and ANT 499. Departmental option for pass/fail grading. Prerequisite: junior standing. Maximum 12 credits may be earned between ARC 498 and ANT 499. Offered Occasionally.

ARC 499 Cr.3

Senior Project/Thesis in Archaeology

This course is the last course in the archaeological studies major course sequence and is normally taken during the student's final year. The course is designed to assist the student in completing the graduation requirement of the senior project/thesis. Prerequisite: ARC 196; senior standing. Consent of instructor. Offered Spring.

Art (ART) - Courses

Courses

+ART 102 Cr.2

Art Appreciation

Discovering the visual world. An introduction to the visual arts of applied arts, architecture, craft arts, film/video arts, painting/drawing, printing/graphic arts, and sculpture. The student will learn to use analysis and evaluation to explore the meaning of art. Offered Fall, Winter, Spring, Summer.

+ART 160 Cr.3

General Art Foundations

An introductory course in visual art, with emphasis on understanding the methods of art making in a variety of studio disciplines. Topics include recognition of visual elements and principles of design, methods of applying these elements and principles throughout a variety of art forms, thematic development, relationship of the visual arts to other fields of human endeavor, and an introduction to writing about visual art. Course content includes representative paradigms of world art, Western art, multicultural and contemporary art. Critical thinking is explored through responses to the visual arts through active involvement with various creative processes and media. Offered Fall, Spring.

ART 162 Cr.4

Drawing Foundations

Drawing foundations introduces the student to a studio-based approach to the visual arts. Students in this course will learn to use and explore the descriptive and expressive characteristics of various drawing media. Students will also use close observation and analysis of visual experience. The course is primarily a study of perceptual observation, the materials and methods of drawing being the vehicle for investigation and interpretation. Lect. 2, Studio 4. Offered Fall, Spring.

+ART 172 Cr.3

Photography Survey

This course is a thematic examination of photography as a contemporary art form. Through lectures, films, hands on assignments and discussions, students will learn important conceptual and visual trends employed in art photography. Topics covered will include: 19th and 20th century influences, multi-cultural interpretation of genres, issues of identity and the influence of digital technology on photography. Students will also learn about individual and collective cultural models utilized to form the complex visual language of photographs. Offered Fall, Spring.

ART 205 Cr.4

Painting Media I

This course provides an introduction to the techniques and materials of painting in acrylic, oil, or watermedia. Emphasis is on components of painting space, color, volume, value, and scale. Various stylistic approaches and sources are explored through a study of historical and contemporary practices in painting. Lect. 2, Studio 4. Prerequisite: ART 162 or ART 262. Offered Fall, Spring.

ART 206 Cr.4

Introduction to Digital Art and Design for Non-Art Majors

This is an introductory studio art course surveying the growing field of digital art and design. This class will explore the process of visual expression, communication with attention to aesthetic considerations, and art created using a wide range of digital media. This class will also introduce digital tools to produce original, creative work. Using creative software, students will create a diverse array of art and design works, spanning digital imaging, compositing, and video editing. As with all fine arts studio courses, conceptual creative approach and development is prioritized. A basic knowledge of computer use is required. Lect. 2, Studio 4. Prerequisite: not open to art majors or minors. Offered Fall, Spring.

ART 207 Cr.4

Introduction to Digital Art and Design

This is an introductory studio art course surveying the growing field of digital art and design. The curriculum provides students with a solid base and an inquisitive edge on which to continue building in advanced courses in digital media. This class will explore the process of visual expression, communication with attention to aesthetic considerations, and art created using a wide range of digital media. This class will also introduce digital tools to produce original, creative work. Using creative software, students will create a diverse array of art and design works, spanning digital imaging, compositing, and video editing. As with all fine arts studio courses, conceptual creative approach and development is prioritized. A basic knowledge of computer use is required. Lect. 2, Studio 4. Offered Fall, Spring.

ART 212 Cr.4

Sculpture for Non-Art Majors

This course is a studio-based introduction to materials, methods, and concepts used in the creation of sculptural art and three-dimensional design. Students will engage in a variety of assignments and exercises designed to develop and enhance visual awareness, creative thinking, personal expression and technical refinement. In addition to creative projects and studio work, students will analyze and think critically about basic visual concepts as they apply to developments in historical and contemporary sculpture and participate in supplemental writing, group discussion, and class critiques. Lect. 2, Studio 4. Prerequisite: not open to art majors or minors. Offered Fall, Spring.

ART 213 Cr.4

Ceramics for Non-Art Majors

This course will focus on learning new skills and/or refining skills in ceramics by exploring the history of ceramic form, researching contemporary ceramists, and practicing hand-built, wheel thrown, and surface techniques. Repeatable for credit - maximum eight, with instructor permission. Lect. 2, Studio 4. Prerequisite: not open to art majors or minors, except the art therapy minor. Offered Fall, Spring.

ART 214 Cr.4

Introduction to Sculpture

This course is a studio-based introduction to materials, methods, and concepts used in the creation of sculptural art and three-dimensional design. Students will engage in a variety of assignments and exercises designed to develop and enhance visual awareness, creative thinking, personal expression and technical refinement. In addition to creative projects and studio work, students will analyze and think critically about basic visual concepts as they apply to developments in historical and contemporary sculpture and participate in supplemental writing, group discussion, and class critiques. Lect. 2, Studio 4. Offered Fall, Spring.

+ART 215 Cr.3

Introduction to Museum Studies

Museums are more popular than ever before. This course, designed for students interested in museological practices and museum careers, will focus on art museums, but will also embrace history, anthropology, archeology and public administration, to examine the institutional and ethical dimensions of presenting culture in a dedicated space. It will introduce students to how museums operate, and explore critical issues of power, privilege and diversity. We will look at museum missions, collection practices, exhibition strategies, and audience appeal. With that in mind, we will examine the various ideologies at play in museums today, and the ethics of cultural representation and "ownership" of cultural artifacts. Offered Spring.

ART 216 Cr.4

Introduction to Ceramics

This is a studio course which explores the process and materials of ceramics. The course begins with hand building techniques. The end of the semester focuses on throwing on the potter's wheel. Throughout the course the student will experiment in clay, glazes, and surface decoration. Lect. 2, Studio 4. Offered Fall, Spring.

ART 218 Cr.4

Print Media I

This course is the first of a two-part introductory series of studio courses designed for students interested in exploring the possibilities of the printed image. The course is structured around two modules, each focusing on traditional analog and contemporary digital approaches to screen printing and relief printmaking. Students will learn about the role these media had in the history of art and visual communication and examine their range of applications existing within contemporary fine art practice. Class participants will be required to produce a body of work utilizing the materials covered in class. Instruction includes tutorials, slide presentations, visiting artist lectures, assigned projects, readings, and critiques. Lect. 2, Studio 4. Prerequisite: ART 162 or ART 262. Offered Fall, Spring.

ART 221 Cr.4

Introduction to Metalsmithing

This course provides the student's introductory experience to a studio-based approach to visual art in the three-dimensional realm. Students apply design elements and principles to projects and experiences as they occur in the physical world. Concentration will focus on expanding visual vocabulary through investigations of introductory nonferrous metal fabrication and construction techniques utilized in the creation of jewelry and metal objects. The course will explore conceptual problem solving, introductory constructions/fabrication techniques, and an investigation into the inherent qualities of non-ferrous materials. Cutting, soldering, finishing, surface enrichment, cold connections, forming, forging, and raising will be covered in this course. Lect. 2, Studio 4. Offered Fall, Spring.

ART 222 Cr.4

Metalsmithing for Non-Art Majors

This course provides an introductory experience to a studio-based approach to visual art in the three-dimensional realm. Students apply design elements and principles to projects and experiences as they occur in the physical world. Concentration will focus on expanding visual vocabulary through investigations of introductory nonferrous metal fabrication and construction techniques utilized in the creation of jewelry and metal objects. The course will explore conceptual problem solving, introductory constructions/fabrication techniques and an investigation into the inherent qualities of non-ferrous materials. Cutting, soldering, finishing, surface enrichment, cold connections, forming, forging, and raising will be covered in this course. Lect. 2, Studio 4. Prerequisite: not open to art majors or minors. Offered Fall.

ART 223 Cr.4

Introduction to Blacksmithing

This course provides an introductory experience to a studio-based approach to visual art in the three-dimensional realm. Students apply design elements and principles to projects and experiences as they occur in the physical world. Concentration will focus on expanding visual vocabulary through the design and development of traditional and experimental blacksmithing techniques. The course will explore conceptual problem solving, introductory forging and fabrication techniques and an investigation into the inherent qualities of ferrous materials. Hot forging, bending, cutting, welding, finishing, surface enrichment, and traditional joinery will be covered in this course. Lect. 2, Studio 4. Offered Fall.

+ART 251 Cr.3

Survey of Art History

This course is a survey of selected art and design from diverse cultures - prehistory to the present. Students explore basic art history methods of formal, stylistic, and iconographic analysis and practice skills needed to develop critical looking and thinking. Emphasis placed on the relationships between artifacts and cultures, and how the production of art and design is a form of human world knowledge. Themes include the role of the artist and designer over time, techniques and materials as technological advancements, the social and religious context of art, how art history influences contemporary images and photography, and how to apply art history analysis skills to interpreting contemporary media images. Offered Fall.

ART 262 Cr.4

Drawing II

A studio course emphasizing growth through observation, exploration and interpretation of visual forms-including the figure. Drawing as language is investigated and interpreted by exploring various styles and techniques from traditional and contemporary works. Lect. 2, Studio 4. Prerequisite: ART 162. Offered Fall, Spring.

+ART 272 Cr.4

Photography and Imaging I

This studio course serves as an introduction to digital photography, including digital camera functions, exposure techniques, digital workflow, image processing, and inkjet printing. Students learn the technical mechanics of the medium and are given hands-on projects to further their understanding of photography in aesthetic and conceptual terms. Students are encouraged to explore the possibilities of the medium, think critically about photographic works, and embrace creative risk as they learn and refine their craft. Class time will consist of demonstrations, lectures, discussions, studio/lab sessions, and group critiques. To complete the assignments for this course, each student must have access to an external hard drive and a digital camera with manual exposure control and the ability to capture RAW files. A limited number of cameras are available for rent through the UWL Photography Lab. Lect. 2, Studio 4. Offered Fall, Spring.

+ART 301 Cr.3

World Art

This course will be an in-depth examination of art forms in various historical, social, and religious contexts of Africa, South and South East Asia, the Pacific, and the Americas. Students will explore issues, approaches and controversies in cross cultural civilizations through art as a primary source of understanding. They will experience how, through art, the values and ideas of many cultures have evolved and new patterns of globalization have shaped the modern world. Prerequisite: junior standing. Offered Fall, Spring.

+ART 302 Cr.3

Visual Language in the Global Classroom

This course provides a discovery of the connections between visual art and a variety of disciplines. Cultural values and the social institution of education will be examined. Through inquiry, analysis, and research, students will explore art as a form of perceptual, social, and cultural learning. Students will develop guiding questions, rubrics, and procedures for the instruction of visual art education and will consider a model of instruction which guides and nurtures creativity and higher level thinking skills. Offered Fall, Spring.

ART 304 Cr.4

Color Theory

This course is an intensive study of color through studio practice in water-based media. As part of the painting course sequence, this course isolates the element of color in practice while examining its relationship to other elements in analysis. The student will build upon material covered in ART 205 to develop a more sophisticated understanding of color and other attributes of painting. Course content includes physiological and cultural perceptions of color, and processes of color mixture, opacity, and transparency. Lect. 2, Studio 4. Prerequisite: ART 205. Offered Occasionally.

ART 305 Cr.4

Painting Media II

This intermediate level painting course expands upon the concepts introduced in ART 205 with an emphasis on creative development within the discipline. Students develop unique visual language, creative expression, and conceptual understanding through active participation in painting, studio practice, and critiques. Lect. 2, Studio 4. Prerequisite: ART 205. Offered Fall, Spring.

ART 306 Cr.4

Drawing and Painting Media

This course explores a variety of media and techniques and provides an expanded experience with drawing and painting. Students will be encouraged to work thematically as they build a portfolio with breadth in media and depth of expression. Studio practice emphasizes the hybridization of personal expression and the relationship between scale, media, and image; such issues will be examined in a variety of formats and techniques. Studio work will focus on experimentation beyond traditional drawing practice. Sources and examples by artists from the past—as well as the present—will be used to direct the students in this class toward inventive solutions for the assigned projects. The materials emphasized in this course include pen, ink, graphite, collage, acrylic, oil stick, and digital imaging. Lect. 2, Studio 4. Prerequisite: ART 162 or one 200-level studio course. Offered Fall, Spring.

ART 308 Cr.4

Intermediate Digital Art and Design

This course is an intermediate studio designed to investigate the concepts and practices of digital media as a basis for art production and making contributions to the field of visual culture. Observation, material manipulation, time/space consideration, and technical reconsideration are skills that will be specifically developed throughout the course. Students in this course will create a diverse array of digital artworks, spanning digital imaging and compositing, sound design, video art, motion graphics, and fine art engagement with the web. As with all fine arts studio courses, conceptual creative approach and development is prioritized. Lect. 2, Studio 4. Prerequisite: ART 206 or ART 207. Offered Fall, Spring.

ART 314 Cr.4

Intermediate Sculpture

This is an intermediate level course designed to expand and build on previous knowledge and experiences with sculptural material, methods, and concepts. In addition, students will be introduced to new media and more complex techniques and processes in sculpture. Greater emphasis will be placed on personal expression and creative strategies for communicating and aligning individual skills with conceptual ideas. Lect. 2, Studio 4. Prerequisite: ART 212 or ART 214. Offered Fall, Spring.

ART 315 Cr.3

Writing About Art

This is an advanced course with a focus on research, analytical skills and writing about art. Students analyze essays by different artists, scholars, and critics, and will learn the practice of different forms of art writing, including formal analysis, wall text, exhibition review, and research paper. Prerequisite: ART 251. Offered Spring.

ART 316 Cr.4

Intermediate Ceramics

Studio course specializing in the skill associated with the pottery wheel. Emphasis upon individual research in the mixing of clay bodies and simple experiments in glaze research. Lect. 2, Studio 4. Prerequisite: ART 162; ART 213 or ART 216. Offered Fall, Spring.

ART 318 Cr.4

Print Media II

This course is the second of a two-part introductory series of studio courses designed for students interested in exploring the printed image's possibilities. The course is structured around two modules, each focusing on traditional analog and contemporary digital approaches to lithography and intaglio printmaking. Students will learn about the role these media had in the history of art and visual communication and examine their range of applications existing within contemporary fine art practice. Class participants will be required to produce a body of work utilizing the materials covered in class. Instruction includes tutorials, slide presentations, visiting artist lectures, assigned projects, readings, and critiques. Lect. 2, Studio 4. Prerequisite: ART 218. Offered Fall, Spring.

ART 320 Cr.4

Intermediate Metalsmithing: Forging and Raising

This studio course will focus on the design and development of traditional and experimental hollowware and metalsmithing techniques. It will introduce students to hand and machine practices relative to the raising and forming processes of metalwork. The course will explore conceptual problem solving, sheet metal forming methods, inherent qualities of non-ferrous materials, and a continuation of applying design elements and principles to projects and experiences. Synclastic and anticlastic raising, non-ferrous metal forging and forming, and hydraulic press forming will be covered in this course. Lect. 2, Studio 4. Prerequisite: ART 221 or ART 222. Offered Spring.

ART 321 Cr.4

Intermediate Metalsmithing

This studio course will focus on the design and development of nonferrous casting techniques utilized in the creation of jewelry and metal objects. It will introduce students to hand and machine practices relative to the solidification processes of metalwork. The course will explore conceptual problem solving, gravity and centrifugal casting methods, inherent qualities of non-ferrous materials, and a continuation of applying design elements and principles to projects and experiences. Lost-wax casting, soldering, finishing, and faceted stone-setting will be covered in this course. Lect. 2, Studio 4. Prerequisite: ART 221 or ART 222. Offered Fall, Spring.

ART 323 Cr.4

Intermediate Blacksmithing

This intermediate studio course will focus on the design and development of traditional and experimental blacksmithing techniques. It will provide a hands-on opportunity for students to expand creative and technical skills related to hot-forged metal objects. This course builds on the technical foundation learned in ART 223, while challenging students to embrace non-traditional techniques and increase the scale of their metal object. This course will explore the inherent qualities of ferrous materials, and a continuation of applying design elements and principles to projects and experiences. Repeatable for credit - maximum eight. Lect. 2, Studio 4. Prerequisite: ART 223. Offered Fall.

ART 331 Cr.3

Art of the United States

This course presents a study of the visual arts of the United States from its formation through the birth of the industrialized and modernized nation in the 20th century. Throughout the semester we will examine in particular how the political and social anxieties and ideals of democracy and national identity were negotiated and represented by artists. Focusing on the varied images of American society created by artists of diverse class, racial, and ethnic backgrounds, the class will consider the broad themes of the impact of national expansion and colonization, immigration, urbanization, and modernization. Offered Fall.

+ART 332 Cr.3

Themes of Contemporary Art

Have you ever seen an artwork and thought to yourself, "A four-year-old could do that?" This class introduces the contemporary art world and considers how artists of the past thirty years have challenged our understanding of what art is and can be. We will explore the rise of postmodernism and new forms of art making, the intersection of art and social movements, issues of identity and representation, censorship, the art market, and how contemporary artists are engaging with some of the most important issues of our day. Prerequisite: junior standing. Offered Spring.

ART 341 Cr.3

Selected Topics in Art History

This course is an intensive review of significant movements and styles in the history of art. The particular subject of the course will be chosen each year by the art faculty. This course is intended to provide an exposure to key topics in greater depth than allowed in the art history survey courses. Repeatable for credit - maximum six. Offered Spring.

ART/PSY 350 Cr.3

The Practice of Art Therapy

As the theoretical orientation course in the art therapy minor, the class addresses current issues in the field of art therapy. Taking a multidisciplinary approach, students will explore art therapy theories, art therapy assessments, and the historical use of art therapy materials and media. Prerequisite: PSY 204 or PSY 212. (Cross-listed with ART/PSY; may only earn credit in one department.) Consent of department. Offered Occasionally.

ART 360 Cr.1-3

Travel/Study in Visual Art

Travel courses are conducted to various parts of the nation and world and may be led by one or more faculty members. Course work may include studio/professional practice, research, or seminar topics. Prior trip arrangements, financial deposit, and consent/orientation with International Education (if applicable) are required. May be repeated to different locations. Repeatable for credit - maximum six. Prerequisite: sophomore standing. Consent of instructor. Offered Occasionally.

ART 361 Cr.3

Field Experience in Art Education I

This course is designed to equip teacher candidates with a theoretical and practical foundation for visual art instruction. Through an integrated field experience, candidates will reflect on and engage in curriculum planning and instruction as it applies to visual literacy, the WI Core Standards for Art, the WI InTASC Teaching Standards, and WI DPI licensure requirements. A consistent schedule in the K-12 field placement will be established and maintained. Students will be expected to observe and reflect on the learning environment, classroom management approaches, learning differences, adaptations, visual supports, and studio procedures while also engaging in practical aspects of instruction (as determined by their university supervisor and cooperating teacher). Prerequisite: concurrent enrollment in ART 401 or ART 403; admission to teacher education. Consent of instructor. Offered Fall, Spring.

ART 362 Cr.4

Drawing III

This is a studio course emphasizing growth in observation and interpretation of complex visual forms. Students gain greater understanding in drawing as language through exploration of various styles and techniques in both traditional and contemporary drawings. Utilizing the expertise and experience gained in both "Drawing Foundations," ART 162, and "Drawing II," ART 262, students will experiment through thematic exploration to develop a visual vocabulary in drawing, with life drawing as a major component. Lect. 2, Studio 4. Prerequisite: ART 262. Offered Fall, Spring.

ART 372 Cr.4

Photography and Imaging II

This intermediate photography course explores techniques of digital capture, photographic editing software, image compositing, large-scale digital printing, and studio lighting. Students produce creative projects and investigate the work of a wide range of digital photographers and related artists. Class time consists of demonstrations, lectures, discussions, studio sessions, and group critiques. To complete the assignments for this course, each student must have access to an external hard drive and a digital camera with manual exposure control and the ability to capture RAW files. A limited number of cameras are available for rent through the UWL Photography Lab. Lect. 2, Studio 4. Prerequisite: ART 272. Offered Fall, Spring.

ART 373 Cr.4

Documentary Strategies in Photography

This course introduces students to various strategies in documentary photography. It entails an examination of the photographic document as it functions as evidence, a catalyst to social reform, and a cultural representation of reality. Coursework explores the objectivity of the social document and new documentary approaches in a fine art context. Class time includes demonstrations, lectures, discussions, studio sessions, and group critiques. To complete the assignments for this course, each student must have access to an external hard drive, and a digital camera with manual exposure control and the ability to capture RAW files. A limited number of cameras are available for rent through the UWL Photography Lab. Lect. 2, Studio 4. Prerequisite: ART 372. Offered Spring - Odd Numbered Years.

ART 375 Cr.4

Special Projects in Photography

This intermediate studio course encourages the development of independent, long-term student projects and portfolio-building. Coursework includes group and individual critique, studio work, discussions, readings, writing, and technical demonstrations. Repeatable for credit - maximum eight. Lect. 2, Studio 4. Prerequisite: ART 272. Consent of instructor. Offered Occasionally.

ART 376 Cr.4

Portraiture in Photography

This intermediate studio course explores photographic portraiture. Studio projects examine various strategies of creating portraits, photographic techniques, lighting, and the history of portraiture in art. Coursework includes hand-on studio projects, group critiques, readings, discussions, lecture, and demonstrations. To complete the assignments for this course, each student must have access to an external hard drive, and a digital camera with manual exposure control and the ability to capture RAW files. A limited number of cameras are available for rent through the UWL Photography Lab. Lect. 2, Studio 4. Prerequisite: ART 372. Offered Fall - Odd Numbered Years.

ART 378 Cr.4

Advanced Digital Photography and Imaging

This class uses photographic software to explore the conceptual and practical fundamentals of photography in the digital era. Studio projects explore creative possibilities of composited photographs and the impact of digital technology on contemporary photographic practice. The coursework comprises hands-on studio time, lectures, readings, discussion, technical demonstrations, and group critiques. To complete the assignments for this course, each student must have access to an external hard drive and a digital camera with manual exposure control and the ability to capture RAW files. A limited number of cameras are available for rent through the UWL Photography Lab. Lect. 2, Studio 4. Prerequisite: ART 372. Offered Spring - Even Numbered Years.

ART 401 Cr.3

Methods in Art Education I: Foundational Practices

This course is one of two required offerings for art education majors who plan to teach visual art and design in the K-12 classroom. Practical, theoretical, and philosophical aspects of teaching art will be emphasized in relation to literacy-building, visual culture, skill and concept development, classroom management, foundational disciplines, and studio procedures. Foundational practices and theories of art education will be regarded and evaluated such as discipline-based art education, thematic teaching and learning, the connections between art and culture, adaptive art, and the elements and principles of art and design. Students will incorporate WI Act 31, the Wisconsin Core Arts Standards and Wisconsin InTASC Standards in the development of their unit and lesson plans, curriculum, and assessments while being in accordance with licensure standards for teaching and learning for elementary (K-5) and secondary levels (grades 6-12). Prerequisite: concurrent enrollment in ART 361 or ART 461; admission to teacher education; declared art education major. Consent of instructor. Offered Spring.

ART 403 Cr.3

Methods in Art Education II: Contemporary Practices

This course is one of two required offerings for art education majors who plan to teach visual art and design in the K-12 classroom. Practical, theoretical, and philosophical aspects of teaching art will be emphasized in relation to curricular design, cultural competence, visual thinking, creativity and problem-solving, critique, studio habits, and creating community through classroom management strategies. Contemporary pedagogies of art education will be regarded and evaluated such as choice-based art education, culturally relevant teaching and learning, equity and inclusion, art as social justice, adaptive art in special education, digital art/media, and interdisciplinary models. Students will incorporate WI Act 31, the Wisconsin Core Art & Design Standards, and Wisconsin InTASC Teaching Standards in the development of curriculum while being in accordance with WI DPI licensure requirements for visual arts at the elementary (K-5) and secondary levels (grades 6-12). Prerequisite: concurrent enrollment in ART 361 or ART 461; admission to teacher education. Offered Fall.

ART 405 Cr.4

Expanded Practices in Painting Media

This course provides an opportunity for further development of visual language through the medium of paint in an individualized studio environment. The course involves a dedication to ongoing creative work and an increased awareness of contemporary painting discourses. Students focus on issues of content and expression through individual projects and research. Repeatable for credit - maximum eight. Lect. 2, Studio 4. Prerequisite: ART 305 or ART 306. Offered Fall, Spring.

ART 408 Cr.4

Advanced Digital Art and Design

This course is an advanced studio for students interested in developing more experimental projects using digital media. Students will complement historic and theoretical readings with their own research and will develop a larger independent project along their own areas of interest. Emphasis is on critical thinking, reflexive creative practice, and synthesis of research, production, and presentation. Students will work with an independent focus in the latter half of the semester building a substantive portfolio piece. As with all fine arts studio courses, conceptual creative approach and development is prioritized. Repeatable for credit - maximum eight. Lect. 2, Studio 4. Prerequisite: ART 308. Offered Fall, Spring.

ART 413 Cr.1-4

Independent Study

Concentrated study in any area: art history, art metal, ceramics, design, drawing, painting, printmaking, and sculpture. Open to advanced students who have excellent records in selected areas. Repeatable for credit - maximum eight for majors, maximum of four for non-majors or minors. Prerequisite: junior standing. Consent of instructor. Offered Occasionally.

ART 414 Cr.4

Advanced Sculpture

The course introduces students to advanced sculpture materials and techniques. Students are challenged to develop individual direction, application of advanced techniques, and experimentation beyond traditional sculpture. This course requires individual commitment to conceptual development, research, and increased awareness of contemporary sculptural discourse. Students will focus on creating a body of sculptural work that highlights technical ability and artistic vision. Emphasis is on documentation, presentation, and career development. Repeatable for credit - maximum eight. Lect. 2, Studio 4. Prerequisite: ART 314. Offered Fall, Spring.

ART 415 Cr.3

Art Seminar

Professional problems related to principles of art, art history, and art education research. Consent of instructor. Offered Occasionally.

ART 416 Cr.4

Advanced Ceramics

This is a studio course with emphasis placed on advanced production techniques including mixed construction methods in pottery. A student's knowledge of clay and glaze composition and kiln design and firing is furthered by an organized approach to technical research. Repeatable for credit - maximum eight. Lect. 2, Studio 4. Prerequisite: ART 251; ART 316. Offered Fall, Spring.

ART 418 Cr.4

Expanded Practices in Print Media

For many contemporary artists, the techniques of print media are naturally part of their larger pallet of art practice, but the end results are not categorized as prints or made with a desire to engage in a larger conversation about traditional printmaking. This advanced studio art course will focus on the contemporary state of fine art print media and explore innovative and experimental approaches to print that expand the notions and practice of the traditional medium. Throughout the semester, students will be introduced to experimental printmaking techniques and alternative approaches to print that seek to blur the boundaries between printmaking, photography, drawing, and installation. The course will focus on both individual and group projects that explore ways in which the studio and printing process can be used as a means of dissemination, collaboration, and social engagement. Repeatable for credit - maximum eight. Lect. 2, Studio 4. Prerequisite: ART 218 or ART 318. Consent of instructor. Offered Fall, Spring.

ART 419 Cr.4

Advanced Print Media Workshop

This course is a self-directed studio art course for senior-level students who wish to further develop their technical knowledge and conceptual understanding of contemporary print media while beginning to focus on their professional careers after graduation. The course will explore a variety of advanced printing techniques, which will largely be determined by the class' interests and the discretion of the instructor. Students will be expected to set personal goals and generate a body of self-initiated creative research projects informed by discussions with course faculty, assigned readings, and group discussions and critiques. This course will be equally focused on helping students maintain a creative artistic practice after graduating. It will also cover professional topics, including print framing and exhibition proposals, print conferences, artist residencies/networks, and ways to build a printmaking studio at home. Repeatable for credit - maximum eight. Lect. 2, Studio 4. Prerequisite: ART 318. Consent of instructor. Offered Fall, Spring.

ART 421 Cr.4

Advanced Metalsmithing

This studio course will focus on advanced techniques utilized in the creation of jewelry and metal objects. Areas of focus include sheet metal manipulation to create dimension or depth through forming and surface enrichment. The course will explore conceptual problem solving, creating relief through hand and machine practices, the inherent qualities of non-ferrous materials, and a continuation of applying design elements and principles to projects and experiences. Individual research, chasing, hydraulic press forming, and pattern development are emphasized. Repeatable for credit - maximum eight. Lect. 2, Studio 4. Prerequisite: ART 321. Offered Fall, Spring.

ART 425 Cr.1-4

Perspectives in Art

In this course, students explore a specific art media on campus or in the international environment. The course will stress intensive individual research and/or creative endeavor. Repeatable for credit - maximum eight. Prerequisite: ART 162; completion of intro-advanced sequence in a studio media. Consent of instructor. Offered Fall, Spring.

ART 450 Cr.1-3

Internship in Art

An academic or experientially relevant course in the creative arts, art education, art history and museology. Repeatable for credit - maximum 15. No more than six credits may be applied toward a major in the art department. Prerequisite: at least a 2.50 overall GPA and a 2.75 GPA in art; at least 22 hours in art including specific course work where applicable; junior standing. Pass/Fail grading. Offered Occasionally.

ART 461 Cr.3

Field Experience in Art Education II

This course is designed to build on prior field experience to equip teacher candidates with a conceptual framework, pedagogy, and practicum for teaching visual art. Through an integrated field experience, candidates will engage in curriculum design, instruction, and assessment as it applies to the WI Core Standards for Art, the WI InTASC Teaching Standards, WI DPI licensure requirements, and their future career. A multi-day, consistent schedule in the K-12 field experience placement classroom will be established and maintained. Students will be expected to engage in classroom instruction while practicing conflict-resolution, management strategies, building relationships, collaborating, and maintaining inclusive approaches to teaching and learning (as determined by their university supervisor and cooperating teacher). Prerequisite: concurrent enrollment in ART 401 or ART 403; admission to teacher education. Consent of instructor. Offered Fall, Spring.

ART 462 Cr.4

Advanced Drawing

This studio course emphasizes thematic and conceptual growth in drawing with self-directed and mentored projects. Students explore, examine and develop a concept in drawing by analyzing and integrating contemporary drawings practices. Utilizing the expertise and experience gained in studio media, students will experiment in alternative drawing media to seek connections among various studio practices including installation and performance. Repeatable for credit - maximum eight. Lect. 2, Studio 4. Prerequisite: ART 362. Offered Annually.

ART 475 Cr.1-4

Perspectives in Art: Photography

This course allows students to further explore photography on campus or in an international environment. This course promotes intensive research/creative endeavor, independent project design, and development of long-term projects. Repeatable for credit - maximum eight. Prerequisite: ART 372. Consent of instructor. Offered Occasionally.

ART 476 Cr.4

Experimental Photography and Imaging

This course encourages advanced students to experiment with image making techniques. These include image-capture, traditional darkroom methods, non-narrative sequencing, non-silver processes, surface manipulation, the photograph as a sculptural object, photo-collage, and many other possibilities beyond the conventional representational photograph. The "camera" itself is reexamined by exploring the camera obscura, pinhole photography, cell phones, the scanner and video as legitimate tools for creating photographic works. Lectures and films will acquaint students with the history of experimental photography. Lect. 2, Studio 4. Prerequisite: ART 372. Offered Fall - Even Numbered Years.

ART 498 Cr.3

Professional Practices and Exhibition

This capstone course is intended to assist students in the final stages of their education and help in the establishment of career goals beyond the college experience. Further the course will expose students to the theory and practice of the exhibition and presentation of artwork. This course will prepare students for the senior exhibition by fostering an understanding of professional presentation and an appreciation of the methodologies of presentation. Prerequisite: art major; senior standing. Consent of department. Offered Fall, Spring.

Biology (BIO) - Courses

Courses

+BIO 100 Cr.4

Biology for the Informed Citizen

This course develops an understanding of what science is and utilizes biology as a framework for investigating the importance of science in our everyday lives. Topics include evolution, ecology, human impact on the environment, cell biology, and genetics as it relates to human reproduction. This course is designed as a general education course for non-science or non-allied health majors. Not applicable to the major or minor in biology. Prerequisite: Students with credit in BIO 103 or BIO 105 cannot earn credit in BIO 100. Offered Fall, Spring, Summer.

+BIO 102 Cr.3

Contemporary Issues in Biological Sciences

An intra-disciplinary approach to investigating current issues within the biological sciences. Specific topics under the general categories of health, medicine, environment, genetics, and industrial technology will be identified, described and characterized. The science underlying the issue will be explored and the potential impact (past and future) of applied scientific advances within the respective disciplines will be examined in depth. Not applicable to a major or minor in biology. Offered Occasionally.

+BIO 105 Cr.4

General Biology

An introduction to biology including topics in ecology, population biology, nutrient cycling, food webs, cell structure and function, metabolism, photosynthesis, reproduction, genetics, molecular biology and evolution. This course provides a strong foundation for further science courses, and is designed for science majors, allied health majors and students with an interest in science. Lect. 3, Lab. 2. Students cannot earn credit in both BIO 103 and BIO 105. Offered Fall, Spring.

BIO 202 Cr.2

Introduction to Biological Data Analysis and Interpretation

This course is an introduction to the common techniques used by biologists to efficiently and effectively process, interpret, and communicate ideas and information generated in the biological sciences. Students will learn the techniques in a hands-on approach using biological databases. Topics covered in this course will include basic laboratory and field notebook production and use; the use, analysis and interpretation of databases, graphs, tables, charts, and other visual aids used in scientific papers; techniques for digital microscopic image production and analysis. Prerequisite: BIO 105. Offered Summer, Winter.

BIO 203 Cr.4

Organismal Biology

A survey of the diverse form and function of prokaryotes, protists, fungi, plants and animals. Basic ecology, natural history, evolution, biogeography and importance of organisms to humans will be emphasized. Lect. 3, Lab 3. Prerequisite: BIO 105 with a grade of "C" or better. If both BIO 210 and BIO 304 have been completed, BIO 203 cannot be taken for credit. Offered Fall, Spring.

BIO 210 Cr.3

Animal Biology

Animal biology is a phylogenetic survey of the animal-like protists and animal kingdom beginning with single celled organisms and ending with vertebrates. Innovation of form and function of each major animal group will be discussed along with their taxonomy, ecology, natural history, distribution, medical and economic importance to humans and natural ecosystems. Lect. 2, Lab 2. Prerequisite: BIO 203. Offered Fall.

BIO 260 Cr.1-3

Special Topics in Biology

Topics in biology of interest to selected groups. Topics will be offered with a specific title. May be staffed by resident faculty or visiting lecturers. Other departments may be invited to participate. Repeatable for credit - maximum six. Prerequisite: BIO 105. Offered Occasionally.

BIO 289 Cr.1

Introduction to Scientific Research

This course is a directed independent study project or research assistance experience within the discipline, but outside that offered through regularly scheduled courses, under the direction of the supervising faculty member. Repeatable for credit - maximum four. Departmental option for pass/fail or letter grade. Consent of instructor. Pass/Fail grading. Offered Fall, Spring, Summer.

BIO 299 Cr.1

Biology Tutor Training Practicum

This course is designed to offer training and supervision for biology tutors. The course will include an overview of best tutoring practices and how to best serve different client populations. Students will develop a reflective tutoring practice based on reading and course discussions. Content specific training will be done throughout the semester at appropriate times. It is strongly encouraged that the student take the course during the first semester of employment at a biology tutor. Failure to complete the course during the first year of employment will result in termination of employment as a tutor. Students who repeat the course will engage more deeply with the content. Repeatable for credit - maximum three. Prerequisite: BIO 105. Consent of instructor. Pass/Fail grading. Offered Fall, Spring.

BIO 302 Cr.2

Introductory Plant Identification

Introduction to the identification of trees, shrubs, and other herbaceous plants of both local native and cultivated species. Field trips required. Lect. 1, Lab 2. Prerequisite: BIO 203 or BIO 304. Offered Fall - Odd Numbered Years.

BIO 303 Cr.4

Vertebrate Form and Function

Anatomy and physiology of the vertebrates with the rat as the basic study animal. Lect. 2, Lab 4. Prerequisite: BIO 105. Offered Occasionally.

BIO 304 Cr.3

Plant Biology

Plant Biology is a phylogenetic survey of the plant-like protists and organisms in the plant kingdom beginning with single celled organisms and ending with flowering plants. Innovation of form and function of each major plant group will be discussed along with their anatomy, morphology, taxonomy, ecology, natural history, distribution, medical and economic importance to humans and natural ecosystems. Lect. 2, Lab 2. Prerequisite: BIO 203. Offered Spring.

BIO 306 Cr.4

Genetics

A comprehensive study of the basic principles of heredity, including Mendelian and Molecular Genetics. Lect. 3, Lab 2. Prerequisite: BIO 105 and a second biology course applicable to the major. Offered Fall, Spring.

BIO 307 Cr.3

Ecology

A study of interactions that determine the distribution and abundance of living organisms. The basic principles of ecology are presented in order to develop an understanding of the nature of these interactions at the individual, population and community levels of biological organization. Prerequisite: BIO 203. Offered Fall, Spring.

BIO 312 Cr.4

Human Anatomy and Physiology I

A comprehensive study of general anatomical and physiological principles of cells, body fluid compartments, the skeletal, muscular, and nervous systems and the special senses. Required elements of the laboratory portion of the course include computer simulations, microscopy, mammal organ dissections and study of cadaver prosections. Students who have completed this course, or are currently enrolled, may not register for this course again until after freshmen registration (unless they have instructor/department consent). Lect. 3, Lab 2. Prerequisite: grade "C" or better in BIO 105 & CHM 103. Students who have completed this course, or are currently enrolled, may not register for this course again until after freshmen registration (unless they have instructor/department consent). Offered Fall, Spring, Summer.

BIO 313 Cr.4

Human Anatomy and Physiology II

A comprehensive study of the cardiovascular, respiratory, digestive, urinary, reproductive and endocrine systems. Required elements of the laboratory portion of this course include computer simulations, microscopy, mammal organ dissections and study of cadaver prosections. Lect. 3, Lab 2. Prerequisite: earn a "C" or better in BIO 105, CHM 103, and BIO 312. Students who have completed this course, or who are currently enrolled, may not register for this course again until after freshmen registration (unless they have instructor/department consent). Offered Fall, Spring, Summer.

BIO 315 Cr.4

Cell Biology

A comprehensive overview of cell structure and function, including the nature of biomolecules, cellular metabolism and its regulation, the dynamics of membranes and the cytoskeleton, the execution and control of the cell cycle, cell interactions, and cell signaling. Lect. 3, Lab 3. Prerequisite: BIO 105; one additional semester of biology; and a minimum of three semesters of chemistry through organic chemistry. Offered Fall, Spring.

BIO 321 Cr.4

Ornithology

This course covers evolution, anatomy, physiology, ecology, and conservation of birds. It includes field identification with emphasis on Wisconsin forms. There will be a required weekend field trip on either the last weekend in April or the first weekend in May, dependent on the semester and final exam schedule. Lect. 3, Lab 3. Prerequisite: BIO 203 or BIO 210 or BIO 303. Offered Spring.

BIO 330 Cr.3

Economic Botany

Plants provide humans with food, feed, fuel, fiber, pharmaceuticals, and other economically important products. This course provides an introduction to domesticated plant varieties and wild plant species and their value in human and domestic animal nutrition, and as energy sources, manufactured materials and drugs. Ethnobotanical interests in wild plant species will also be discussed. Prerequisite: BIO 203 or BIO 304. Offered Alternate Years.

BIO 333 Cr.3

Radiation Biology

Applications and effects of nuclear radiation on biological systems. Lect. 2, Lab 2. Prerequisite: BIO 105; one additional course in biology; CHM 103. Offered Spring.

BIO 337 Cr.3

Plant Physiology

An introduction to plant water relations, mineral nutrition, respiration, photosynthesis, growth, and development with emphasis on the physiology of seed plants. Prerequisite: BIO 203 or BIO 304. Offered Spring.

BIO 341 Cr.3

Limnology

This course includes fundamentals of aquatic ecology, with special reference to community ecology. Taxonomy, stratification and succession of organisms to be investigated. Energy traffic through aquatic ecosystems will also be investigated. Field trips required. Lect. 2, Lab 3. Prerequisite: BIO 105; one additional biology course; one semester of chemistry. Offered Fall.

BIO/CHM/PHY 356 Cr.2

Curriculum and Assessment in Math and Science

Students are introduced to state and national content standards and related theories on teaching and learning. They will apply this knowledge to develop a curricular framework. Topics will include: Learning outcomes, student misconceptions, balanced assessment, and lesson planning in the content areas. Prerequisite: declared math or science education major/minor; admission to teacher education. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Offered Fall.

BIO 365 Cr.3

Scientific Visualization

The ability to powerfully and effectively convey biological concepts and subjects can depend on the clarity, accuracy, and aesthetics of visualizing subject matter. We will learn skills of the scientific illustrator working in biology and produce a series of graphics with the intent to use in oral presentations, posters, publications, and portfolios. This course is designed to challenge scientist, graphic designer, and artist working specifically in the realm of biology. We will explore topics in biology, because depicting a subject accurately means knowing one's subject intimately. Visualization techniques will include pen and ink and other traditional illustration techniques, digital image creation and manipulation, macrophotography, microscope use, intro to 3D visualization, thermography, etc. Lab 4. Prerequisite: BIO 100 or BIO 105; BIO 203 or ART 262. Offered Fall - Even Numbered Years.

BIO 390 Cr.2

Latin and Greek Roots in Scientific Terminology

Most scientific terminology comes to us as derived from Latin and Greek words. This course provides a solid background in scientific vocabulary by learning root words, prefixes and suffixes, as well as combinations of two or more root words and prefixes. Does not apply toward biology major or most concentrations. Prerequisite: BIO 105. Offered Fall.

BIO 401/501 Cr.4

Comparative Vertebrate Anatomy

Comparative anatomy is fundamental for investigating vertebrate function and evolutionary biology. The course integrates anatomy, evolution, and development of the chordate body, system-by-system and across the group's diversity from flying and running vertebrates to sea squirts and lampreys. Labs will raise insight and skill through comprehensive, respectful dissection of minks, dogfish sharks, lampreys, and representative organ specimens. One lab period per week is dedicated to a main dissection and exploration of anatomy. The next lab period integrates lecture, dissection refinement, and collaborative reinforcement of learning. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 4. Prerequisite: BIO 203 or BIO 210; junior, senior, or graduate standing. Offered Spring.

BIO 404/504 Cr.3

Plant Taxonomy

Collection, identification, classification, and evolution of the vascular plants with emphasis on local flora. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 1, Lab 4. Prerequisite: BIO 203 or BIO 304; junior standing. Offered Spring - Odd Numbered Years.

BIO 405/505 Cr.2

Aquatic and Wetland Vascular Plants

Identification and collection of vascular plants of aquatic and marsh habitats with emphasis on adaptive morphology and ecology of local species. Field trips required. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 1, Lab 2. Prerequisite: BIO 203 or BIO 304; junior standing. Offered Fall - Even Numbered Years.

BIO 406/506 Cr.4

Parasitology

A survey of the major groups of animal parasites with regard to their taxonomy, morphology, life histories, host-parasite relationships, and economic importance. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 4. Prerequisite: BIO 203 or BIO 210 or BIO 303; junior standing. Offered Fall.

BIO 408/508 Cr.4

Developmental Biology

An exploration of the cellular and molecular mechanisms that underlie embryonic development in several model organisms. Topics include fertilization, regulation of gene expression, cell fate determination, stem cells, early pattern formation, morphogenesis of tissues/organs, and limb formation. The course primarily focuses on animal models with an emphasis on evolutionarily conserved processes, structures, and molecular pathways. Technological advances and relevance to human development and disease are highlighted throughout. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab. 4. Prerequisite: BIO 203 or BIO 210 or BIO 303; BIO 306 or MIC 416; BIO 315; junior standing. Offered Spring.

BIO 410 Cr.1

Human Cadaver Dissection

This supervised cadaver dissection course uses a regional anatomy approach and is designed to improve students' competency in human gross anatomy. Students will prepare a human cadaver prosection for use in undergraduate anatomy and physiology laboratories. In addition to dissections, students will use computer-based learning projects and literature reviews to enhance their understanding of human anatomy and the historical and current role of cadavers in society. Prerequisite: BIO 312, BIO 313, and BIO 479 (must have been a TA for BIO 312 or BIO 313). Consent of instructor. Offered Summer.

BIO 412/512 Cr.4

Mycology

A survey of all the major groups of fungi of the fungal kingdom (and relatives) in terms of systematics, anatomy, morphology, ecology, physiology, genetics, evolutionary relationships, and human and plant pathology. Laboratory includes microscopic and macroscopic study of the fungi, as well as making a collection of cultures and of fungal reproductive structures (including mushrooms) from selected groups. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 4. Prerequisite: BIO 203 or BIO 304 or MIC 230 (Both the microbiology course and one of the biology courses are strongly recommended); junior standing. Offered Fall.

BIO 413/513 Cr.3

Medical Mycology

A study of the increasing number of medically important fungi, including the yeasts, molds, other fungi, and actinomycetes that are pathogenic to humans and other animals. Emphasis is on laboratory techniques for isolation and identification of pathogenic fungi. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: BIO 203 or MIC 230; junior standing. Offered Spring.

BIO 414/514 Cr.3

Freshwater Invertebrate Zoology

Introduces the ecology and taxonomy of the metazoan, non-parasitic freshwater invertebrates. An extensive course designed to provide a foundation for taxonomic knowledge, and basic understanding of the biology and ecology of freshwater invertebrates for advanced students in aquatic and environmental sciences. Lectures will focus on ecology; labs on taxonomy and quantitative skills. A student reference collection and field trips will be required. Lect. 2, Lab. 2. Prerequisite: BIO 203 or BIO 210 or BIO 341; junior standing. Offered Occasionally.

BIO 415 Cr.3

Neuroethology

Neuroethology is the study of the neural basis of natural animal behaviors. This course will integrate animal behavior, physiology, comparative anatomy, and neuroscience. Course topics will include the study of a variety of animal species with unique behaviors such as echolocation in bats and cetaceans, social communication in songbirds, jamming avoidance in electric fish, or auditory mapping in owl predation. Prerequisite: BIO 105; CHM 103; NEU 200 or BIO 203 or BIO 312. Offered Fall.

BIO 419/519 Cr.3

Quantitative Methods in Ecology

An introduction to field and laboratory procedures used by ecologists to describe and analyze the interactions between organisms and their environments. The course will emphasize quantitative techniques, including the use of computer technology, for collecting, recording and interpreting ecological data. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: BIO 307 or BIO 341; STAT 145 or MTH 265 or equivalent experience with statistics; junior standing. Offered Fall.

BIO 421/521 Cr.3

Comparative Vertebrate Endocrinology

A comprehensive study of the production, regulation, structure, molecular to whole-body actions, metabolism, and excretion of biochemical signaling molecules across vertebrates with a focus on amphibians, fish, birds, and mammals. Hormone and neurotransmitter pathways will be examined with relationship to evolutionary and environmental influences using lecture, review of primary literature, and case studies. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Credit toward the biology major can only be received for this class or BIO 424, not both. Prerequisite: BIO 313 or BIO 458; junior standing. Offered Spring.

BIO 422/522 Cr.3

Ichthyology

A study of the taxonomy, anatomy, physiology, and ecology of fish, with emphasis on the fresh water fishes. Lect. 2, Lab. 2. Prerequisite: BIO 203 or BIO 210 or BIO 303; junior standing. Offered Fall - Odd Numbered Years.

BIO 424/524 Cr.3

Human Endocrinology

A comprehensive study of the production, regulation, structure, molecular to whole body actions, metabolism, and excretion of biochemical signaling molecules in humans. The classical and more recently recognized neurotransmitter and hormone pathways and clinical and pharmacology considerations of each will be explored using lectures, primary literature, and case studies. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Credit toward the biology major can only be received for this class or BIO 421, not both. Prerequisite: BIO 313 or BIO 458; junior standing. Offered Fall.

BIO 428/528 Cr.3

Advanced Nutrition for the Health Professions

A comprehensive study of nutrition-related diseases and nutrition assessment, evaluation, and management in clinical settings that people working in healthcare may encounter. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 313 or NUT 200; junior standing. Offered Fall, Spring.

BIO 429/529 Cr.3

Evolution

Consideration of the principles and the record of organic evolution of plants and animals. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 306; junior standing. Offered Fall, Spring.

BIO 432/532 Cr.2

Biology of Cancer

A survey of the current knowledge of cancer biology. The course will include lectures on a wide range of cancer topics, including: characteristics of cancer cells, carcinogenesis, cancer genes, tumor classification, invasion, metastasis, inheritance, immunology, drug development, treatment, and prevention. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 303 or BIO 313; BIO 306 or MIC 416; junior standing. Offered Fall, Spring.

BIO 435/535 Cr.3

Molecular Biology

A study of molecular biology with an emphasis on eukaryotic systems. The course will focus on the molecular aspects controlling biological processes. The impact of recombinant DNA technology on biotechnology and medicine will also be examined. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 306 and BIO 315, or MIC 416 and three semesters of college chemistry including organic chemistry; junior standing. Biochemistry strongly recommended. BIO 436 is an optional laboratory which can be taken concurrently. Offered Fall, Spring.

BIO 436/536 Cr.1

Molecular Biology Laboratory

A study of molecular biology with an emphasis on eukaryotic systems. Laboratory emphasis is on recombinant DNA technology, current techniques used to express recombinant proteins in eukaryotic cells, computer based DNA analysis, macromolecular modeling using computers, and quantitative assay techniques. This lab is optional for those enrolled in BIO 435. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lab 3. Prerequisite: taken concurrently with BIO 435; junior standing. Offered Fall, Spring.

BIO 437/537 Cr.3

Plant Growth and Development

Discussion of experiments and analysis of research data obtained from the living plant. Prerequisite: BIO 203 or BIO 304; junior standing. Offered Occasionally.

BIO 439/539 Cr.3

Plant Anatomy

A detailed examination of plant structure and development as revealed with the light and electron microscopes. Primarily seed plants will be examined. Structure and development will be studied as a means by which plants cope with their ecology, evolution and function. Lect. 2, Lab. 2. Prerequisite: BIO 203 or BIO 304; junior standing. Offered Occasionally.

BIO/MIC 440/540 Cr.2

Bioinformatics

In this course, students will use computers to study and compare the sequence of nucleotides in DNA or RNA, or the amino acids in a protein. Computers are also used to examine the three dimensional structure of protein. Being able to manipulate and study this information is the basis for the current revolution in biotechnology. Topics include evolution, taxonomy, genomics and understanding disease. This course provides students an opportunity to explore the relationships between biology, microbiology, chemistry and computer science. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 1, Lab 2. Prerequisite: BIO 306 or MIC 416; junior standing. (Cross-listed with BIO/MIC, may only earn credit in one department.) Offered Spring, Winter.

BIO 441/541 Cr.3

Environmental Toxicology

The study of the lethal and sublethal effects of chemical contaminants on ecosystems and humans. Topics covered include environmental legislation, chemical distribution and fate in the environment, methods of toxicity testing, assessment of exposure and risk, effects of chemical contaminants on humans, and fish and wildlife populations, communities and ecosystems, and toxicity of specific chemical groups. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 307 or BIO 341; CHM 104; junior standing. Offered Spring - Odd Numbered Years.

BIO/MIC 442/542 Cr.3

Plant Microbe Interactions

This course will explore in depth various ways that plants interact with microbes in the environment, at the macroscopic, cellular, and molecular levels. Case studies will include both parasitic and mutualistic (symbiotic) interactions. Microbes include fungi, bacteria, nematodes, and viruses. Includes plant pathology and studies of the beneficial relationships between plants and microbes. Inquiry based labs are integrated into the lecture and discussion sessions. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: BIO 203 or BIO 304; MIC 230; junior standing. (Cross-listed with BIO/MIC, may only earn credit in one department.) Offered Fall - Odd Numbered Years.

BIO 443/543 Cr.3

Molecular Mechanism of Disease and Drug Action

A survey of the leading non-infectious and non-cancerous diseases in the industrialized world. This course will explore the molecular mechanisms of disease, clinical symptomology, and pharmacological treatment. Students will be expected to conduct thorough research on a given disease and present their results in a poster session. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 306, BIO 313; CHM 300 or CHM 304; junior standing. Offered Spring.

BIO 444/544 Cr.4

Entomology

Insects and their close relatives are ubiquitous, affecting humans' lives in profound ways. We will investigate the anatomy, behavior, evolution, and ecology of insects, as well as how insects impact human culture. Discussions, presentations, illustrations, field research, curation of specimens, and other activities offer opportunities for students to apply insect research knowledge and skills. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 3, Lab 2. Prerequisite: BIO 203; junior standing. Offered Fall - Odd Numbered Years.

BIO 446 Cr.3

Animal Behavior

We will explore factors that help to explain how and why animals behave as they do. Example topics include social behavior, learning, symbiotic relationships, sensory systems, communication, mating systems, defense, and parental care. Emphasis will be placed on non-human animals. Discussions, presentations, illustrations, and other activities offer opportunities for students to apply behavioral research knowledge and skills. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 105; BIO 203 or PSY 331 or NEU 200; junior standing. Offered Annually.

BIO 447/547 Cr.3

Standard Methods/Quality Assurance Water Analyses

This course will instruct students on the use of standard methods for analyses of selected biological, chemical, and physical constituents commonly included in water quality analyses. Quality assurance procedures, including Good Laboratory Practice Standards (GLPS) will be integrated into all activities. Materials covered include: principles of methods used; evaluation of precision, bias, and contamination; proper reporting and interpretation of results; and environmental sources and significance of constituents analyzed. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 1, Lab 4. Prerequisite: BIO 203 or BIO 210 or BIO 303 or BIO 304 ; three semesters of college chemistry; junior standing. BIO 341 recommended. Offered Spring.

BIO 449/549 Cr.3

Advanced Microscopy and Biological Imaging

Principles and techniques used in modern microscopy and biological image analysis. Emphasis will be on student projects to become proficient at confocal, fluorescence, and scanning electron microscopy. Students will also learn specimen preparation, digital imaging, and image processing and analysis for biological applications. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: BIO 315 or MIC 230; junior standing. Offered Fall - Even Numbered Years.

BIO 450 Cr.1-3

Internship in Biology

An academically relevant field experience in government, industry, business, or community agencies. Students must have their internships approved and be advised by the department. Students must be on their internship worksite during the semester for which they are registered for academic credit. Credits earned will count only toward university electives and not toward the completion of any major or minor unless listed. Repeatable for credit - maximum eight. Pass/Fail grading. Offered Fall, Spring, Summer.

BIO/CHM/MTH/PHY 451 Cr.2

Curriculum and Content in Science and Mathematics

This is a methods course for science education and mathematics education majors that focuses on how content knowledge and pedagogical content knowledge are used to inform instruction. The course will focus on exploration of state and national standards, academic language, and methods of assessment. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/MTH/PHY 454 or BIO/CHM/MTH/PHY 455; admission to teacher education. (Cross-listed with BIO/CHM/MTH/PHY; may only earn credit in one department.) Consent of instructor. Offered Spring.

BIO/CHM/PHY 452 Cr.2

The Learner and Learning in Science

This is a methods course for science education majors that focuses on learning theories, equitable practices, and culturally relevant pedagogy. The course will draw on recommendations from state and national standards. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/MTH/PHY 454 or BIO/CHM/MTH/PHY 455; admission to teacher education. (Cross-listed with BIO/CHM/MTH/PHY; may only earn credit in one department.) Consent of instructor. Offered Fall.

BIO/CHM/PHY 454 Cr.2

Field Experience I in Science Education

This course is the first field experience in a school environment. Candidates will plan and teach lessons within the designated grade range of 4-12. Candidates will be introduced to classroom management and conflict resolution. A multi-day, consistent schedule in the middle or high school field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/PHY 451 or BIO/CHM/PHY 452; admission to teacher education. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Consent of instructor. Offered Fall, Spring.

BIO/CHM/PHY 455 Cr.2

Field Experience II in Science Education

This course is the second field experience in a school environment. Candidates will plan and teach lessons within the designated grade range of 4-12. Candidates will be introduced to classroom management and conflict resolution. A multi-day, consistent schedule in the middle or high school field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/PHY 451 or BIO/CHM/PHY 452; admission to teacher education. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Consent of instructor. Offered Fall, Spring.

BIO 456/556 Cr.4

Plant Ecology

Conservation biology, ecological restoration, and predicting the effects of climate change all require an understanding of plant ecology. This course is focused on the interactions among plants, other organisms, and the environment. We will work across the individual, population, and community levels, and emphasize an exploratory approach to plant ecology. Class activities will include lectures, the discussion of ecological journal articles, and carrying out student-designed experiments. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 3. Prerequisite: BIO 307 or BIO 341; junior standing. Offered Fall - Even Numbered Years.

BIO 458/558 Cr.4

Comparative Animal Physiology

This course has both a lecture and a laboratory component. It aims to provide a thorough understanding of animal physiology from a comparative perspective. Emphasis will be placed on the basic physiological principles by which animals perform their life sustaining functions. Lectures will focus on vertebral animals, but will span both invertebrate and vertebrate models to illustrate how largely divergent groups have evolved different (or similar) mechanisms to cope with environmental challenges. The laboratory component will provide an active learning environment and hands-on experience in physiological experimentation. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 3, Lab 2. Prerequisite: BIO 203 or BIO 210 or BIO 401; junior standing. Offered Fall.

BIO 460/560 Cr.1-4

Symposium in Biology

Studies in biology of interest to specific groups. Varying topics will be offered at intervals with a specific title assigned to each. May be staffed by resident faculty or visiting lecturers. Other departments may be invited to participate. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit - maximum 16. Variable offerings - check registration schedules. Prerequisite: four semesters of biology; junior standing. Offered Occasionally.

BIO 464/564 Cr.3

Stream and Watershed Ecology

An introduction to key concepts and theory pertinent to understanding and managing fluvial ecosystems (rivers and streams) and their watersheds. The course emphasizes rivers as large-scale physical and biological systems. Course work includes a comparative case study of distinctive types of temperate, tropical, and polar rivers. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 307 or BIO 341; junior standing. Offered Spring.

BIO 465/565 Cr.3

Neurophysiology

An examination of the nervous system beginning at the cellular level and working up to neuronal systems. Topics covered include the ionic basis of membrane potentials, synaptic communication, organization of functional circuits of neurons, and systems within the brain and/or spinal cord which control learning and memory, vision and motor function. Exploration of these fundamental neurophysiology topics from the basis for understanding a variety of student-selected topics which will be covered later in the semester. Late-semester topics often include higher-order aspects of brain function or challenges to the nervous system, such as the repair of brain or spinal cord injury, degenerative disease states, dyslexia, or consciousness. BIO 467 is an optional laboratory course which can be taken concurrently. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 105, CHM 103, and either BIO 312 or NEU 200; junior standing. Offered Annually.

BIO 466/566 Cr.3

Human Molecular Genetics

A study of the basic principles of heredity in humans. Focus will be on modern molecular techniques used in isolating human disease genes and modes of inheritance of human traits and disorders. Ethical issues in human genetics will also be discussed. This course is taught largely at a graduate level. Prerequisite: BIO 306; junior standing. Offered Fall.

BIO 467/567 Cr.2

Neurobiology Laboratory Techniques

An introduction to common laboratory techniques in neurobiology, including electrophysiology with invertebrate preparations, mammalian neuronal cell culture, and computational modeling. Students will receive training in techniques while performing classical experiments, then design their own novel experiments and carry them out. Prerequisite: BIO 312; BIO 465 or concurrent enrollment; junior standing. Offered Spring - Odd Numbered Years.

BIO 468/568 Cr.1

Human Molecular Genetics Lab

A study of the techniques used in doing research in human molecular genetics with a focus on commonly used model organisms in the study of human genetic disorders. Laboratory emphasis is on phenotype analysis, library screening, DNA microarray analysis, gene mapping, and bioinformatics. This course is taught largely at a graduate level. This lab is optional for those enrolled in BIO 466/566. Lab 3. Prerequisite: BIO 306; BIO 466 concurrently; junior standing. Offered Fall.

BIO/CHM/PHY 469 Cr.4

Teaching and Learning Science in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in science. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: GEO 200; EDS 351. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Offered Fall, Spring.

BIO 473/573 Cr.3

Marine Biology

Marine biology is an interdisciplinary field that includes elements of geology, physics, chemistry and biology. Students will gain an introduction to how biological organisms deal with varying physical, geological and chemical conditions found in marine ecosystems. Emphasis will be placed on current conservation concerns and marine invertebrate diversity. Prerequisite: BIO 203; CHM 103; junior standing. Offered Spring - Odd Numbered Years.

BIO 476/576 Cr.3

Ecosystem Ecology

Ecosystems include the living and non-living components of an environmental system and have emergent properties that can only be understood by examining the system as a whole. This course will examine advanced ecological topics centered around the structure and function of aquatic and terrestrial ecosystems. Topics covered will include the development of the ecosystem concept, ecosystem succession, production/decomposition, energy transfer in food webs, and nutrient cycling. The course will consist of classroom lectures, problem sets, and reading/discussion of relevant literature. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 307; one semester of chemistry; junior standing. Offered Spring - Even Numbered Years.

BIO 479 Cr.1

Biology Teaching Assistant

An opportunity to assist in the preparation and/or instruction of a biology course. Working with a faculty members, students may be expected to assist in the development and preparation of course materials, course instruction and student assessment. Repeatable for credit - maximum two. Departmental option for pass/fail or letter grade. Consent of instructor. Pass/Fail grading. Offered Fall, Spring, Summer.

BIO 483/583 Cr.3

Cell Signaling

Cell signaling controls the inner workings of organisms, allowing them to survive, reproduce, develop, respond, and adapt. Course topics will include how cells perceive changes in the environment by receptors, how they transmit the signal from receptors to other signaling molecules, and how signaling results in a cellular response. The course will integrate cell biology, genetics, and biochemistry. It will also complement several biology topics such as biology of cancer, developmental biology, molecular biology, and endocrinology. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CHM 325, CHM 417, or both BIO 306 and BIO 315 (BIO 315 may be taken concurrently); junior standing. Offered Annually.

BIO 488 Cr.3

Mammalogy

A study of the diversity and biology of mammals. The evolutionary history of mammals provides the basis for a survey of modern mammalian groups, including their phylogenetic relationships, ecology, adaptations, and complex behaviors. Specimens of Wisconsin species will supplement the lectures. Prerequisite: BIO 105; BIO 203 or BIO 210; junior standing. Offered Fall.

BIO 489 Cr.1

Independent Study in Biology

A directed reading project or job shadowing experience within the discipline but outside that offered through regularly scheduled courses. Under the direction of the supervising faculty member (and in coordination with mentoring professional for job shadowing experience). A written report is an expected outcome. Repeatable for credit - maximum two. Consent of instructor. Offered Fall, Spring, Summer.

BIO 490/590 Cr.1-3

Current Topics in Biology Education

Biological researchers produce new discoveries almost daily. The purpose of this course is to train K-12 pre-service and in-service teachers in the current technologies and theories used in biology and to demonstrate the current approaches to teaching these materials. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit under different topics. Not applicable to a major or minor in biology, except for teacher certification major. Departmental option for pass/fail grading. Prerequisite: junior standing. Pass/Fail grading. Offered Occasionally.

BIO 491 Cr.1

Capstone Seminar in Biology

A seminar-style course designed for students to review and discuss basic concepts necessary for a career in the biological sciences and to assess their major in biology. This course will cover basic concepts of resume and cover letter writing, quantitative skills, computer literacy and current topics in biology. Students are expected to actively participate in an assessment of their major, and participate in discussions on major issues and developments in the biological sciences. Students will present a seminar on a contemporary biological topic incorporating primary literature. Prerequisite: senior standing. Offered Fall, Spring.

BIO 495 Cr.1-3

Service Learning in Biology

Students will plan, implement, and reflect on community service projects that will allow them to apply, enhance, and share what they have learned in a specific area of focus (such as aquatic science, nutrition, etc.) in cooperation with one or more community partners. The student's university advisor(s) and the participating community partner(s) will provide constructive evaluation of the project and student reflections throughout the experience. The student will provide formal written and oral communications to the advising faculty and community partner(s) regarding the outcomes of the service project. Repeatable for credit - maximum three. Prerequisite: junior standing. Offered Fall, Spring, Summer.

BIO 499 Cr.1-3

Independent Research

Individual research projects. Open to advanced students. Students may enroll for 1-3 credits per semester for a maximum of six credits. A maximum of two credits can be applied to the major in biology. Prerequisite: four semesters of biology and the completion of a consent form signed by the project director. Consent of instructor. Offered Fall, Spring, Summer.

Business Administration (BUS) - Courses

Courses

BUS 350 Cr.1

Career Preparation

This course prepares students to change from the academic environment to the professional environment. Topics include self-assessment, preparing for interviews, written and oral communication in a career search, electronic resources, and graduate school opportunities. Prerequisite: admission to business. Pass/Fail grading. Offered Fall, Spring.

Business Law (BLAW) - Courses

Courses

BLAW 205 Cr.3

The Legal and Ethical Environment of Business

This course introduces students to ethical theory and decision-making models, as well as the legal framework in which American business operates, the substantive legal rules that govern American business domestically and internationally, and the ethical and social responsibility implications of business conduct within the legal environment. Governmental efforts to regulate business activity by statute and administrative agency rules and decisions are emphasized. Prerequisite: ECO 110 or ECO 120; sophomore standing; CBA major or business administration minor. Offered Fall, Spring.

BLAW 305 Cr.3

Business Law

This course introduces the common law subjects of contracts, agency and torts; the Uniform Commercial Code's treatment of sales contracts; and criminal law issues relevant to management decision-making. The course takes the knowledge and concepts learned in BLAW 205 and delves significantly deeper into the interplay between business and law. Prerequisite: BLAW 205; admission to business. Offered Occasionally.

BLAW 405 Cr.3

The Law of International Business Transactions

This course examines the legal problems that arise when business activities and organizations cross national boundaries and become multinational in structure, operation, and scope. Specific attention is paid to the legal effects of international business decisions; doing business in market, non-market and developing nations; the movement of goods, people and information across national borders; protection of intellectual property; international dispute resolution; and international contracts. Prerequisite: BLAW 205; admission to business. Offered Fall, Spring.

BLAW 415 Cr.3

Current Topics in Law

Examination of current legal problems as they relate to business. Prerequisite: admission to business. Offered Occasionally.

Chemistry (CHM) - Courses

Courses

+CHM 100 Cr.4

Contemporary Chemistry

A survey course focusing on applied chemistry. Fundamental chemistry and science concepts are developed and then used to study applications of this science to technology in society. Emphasis is placed on selected topics that are current. Course is not applicable to a major or minor in chemistry and does not meet the prerequisite requirement of any other chemistry course. Lect. 3, Lab 2. Offered Occasionally.

+CHM 103 Cr.5

General Chemistry I

An introduction to chemistry including topics in atomic structure, chemical bonding, molecular structure, chemical stoichiometry, reactivity, states of matter, solutions, acid-base theory, and nuclear chemistry, and also including selected topics in descriptive and applied chemistry. Scientific inquiry, experimental design and data analysis are included. Lect. 3, Lab 3, Disc. 1. Prerequisite: grade of "C" or better in MTH 150 or placement into MTH 151 or higher. Students who are currently enrolled in CHM 103 may not register for this course again until after priority registration (unless they have instructor/department consent). Offered Fall, Spring, Summer.

CHM 104 Cr.5

General Chemistry II

The second half of the two-semester sequence in general chemistry. The course provides an introduction to the topics of chemical kinetics, equilibria in the gas and solution phases, acid-base chemistry, solubility, thermochemistry, and electrochemistry. The laboratory portion of the course serves to reinforce and demonstrate the above concepts through experimentation. Lect. 3, Lab 3, Disc. 1. Prerequisite: grade of "C" or better in CHM 103. Students who are currently enrolled in CHM 104 may not register for this course again until after priority registration (unless they have instructor/department consent). Offered Fall, Spring.

CHM 250 Cr.3

Introduction to Organic and Biochemistry

A survey course focusing on basic organic and biochemistry with applications to chemical processes in human and other living systems. Course is not applicable to a major or minor in chemistry and does not meet the prerequisite requirement of any other chemistry course. Prerequisite: grade of "C" or better in CHM 103. Students with credit in CHM 300 or CHM 325 cannot earn credit in CHM 250. Offered Spring.

CHM 271 Cr.1

The Chemical Community

A sophomore level course for chemistry and biochemistry majors that exposes students to scientific communication (writing, speaking, presenting), the chemical literature and how to search it, potential careers in chemistry and career preparation, student opportunities such as internships and undergraduate research, and current and historical topics in chemistry including ethics in science. Students are expected to participate in discussions and complete various writing and presentation assignments. Prerequisite: CHM 104; sophomore standing; chemistry or biochemistry major. Offered Fall.

CHM 299 Cr.1

Chemistry Tutor Training Practicum

This course is designed to offer training and supervision for tutors in the Murphy Learning Center. The course will include an overview of peer tutoring and learning theory, an overview of the general tutoring process, and an examination of best practices for tutoring various client populations. Students will develop a reflective tutoring practice based on readings and course discussions. The course must be taken during the student's first semester of employment in the Learning Center. Failure to complete the course will result in termination from the Learning Center. Students who repeat the course will engage more deeply with the content and provide meaningful insights for their peers. Repeatable for credit - maximum three. Consent of instructor. Pass/Fail grading. Offered Fall, Spring.

CHM 300 Cr.4

Fundamental Organic Chemistry

This course is a study of the properties, reactions, and applications of the major classes of organic compounds that commonly appear in biological and environmental processes and systems. Theories relating structures of organic molecules to their chemical reactions are presented as unifying principles. Cross-disciplinary applications of organic chemistry to the life sciences and environmental concerns are included. This terminal organic chemistry course is recommended for students in the biological and allied health sciences when only one semester of organic chemistry is required. Course is applicable only to the following Chemistry and Biochemistry Department programs: the chemistry education major and minor, and the chemistry minor. Lect. 3, Disc. 1. Prerequisite: CHM 104; sophomore standing. Students with credit in CHM 303 cannot earn credit in CHM 300. CHM 300 does not satisfy the prerequisite requirement for CHM 304. Offered Fall, Spring, Summer.

CHM 301 Cr.5

Analytical Chemistry

Theory and practice of selected methods of chemical analysis. Titrimetric, potentiometric, spectrophotometric and gas chromatographic methods of analysis are studied. Statistical treatment of data and techniques for quality assurance are also developed. The basic science component in the course is primarily directed towards ionic equilibria. Lect. 3, Lab 6. Prerequisite: CHM 104; sophomore standing. Offered Fall, Spring.

CHM 302 Cr.1

Fundamental Organic Chemistry Laboratory

This is an introduction to common principles of molecular behavior and laboratory practices in organic chemistry. Applications of organic chemistry to the life sciences and environmental concerns are emphasized. This fundamental organic chemistry laboratory is recommended for students in the allied health sciences when an organic laboratory course is needed. Lab 3. Course is applicable only to the following chemistry and biochemistry programs: Chemistry Education major and minor, and the Chemistry minor. Prerequisite: CHM 300 or CHM 304 or concurrent registration. Students cannot earn credit in both CHM 302 and CHM 305. Offered Fall, Spring, Summer.

CHM 303 Cr.3

Organic Chemistry Theory I

A study of the structure, methods of structure determination, stereochemistry and chemical behavior of hydrocarbons, alcohols, and halogenated hydrocarbons. Theories and mechanisms are introduced to explain chemical behavior. Prerequisite: CHM 104; sophomore standing. Students with credit in CHM 300 cannot earn credit in CHM 303. Offered Fall, Spring.

CHM 304 Cr.3

Organic Chemistry Theory II

A study of organic synthesis, common functional groups, carbanions, reaction mechanisms, lipids, carbohydrates, proteins and polymers. Prerequisite: CHM 303. Offered Fall, Spring.

CHM 305 Cr.2

Organic Chemistry Laboratory

This course is an introduction to common laboratory practices in organic chemistry. Experiments are designed to illustrate synthetic and separation techniques. Organic qualitative analysis is included. Lab 6. Prerequisite: CHM 304 or concurrent enrollment. Students cannot earn credit in both CHM 302 and CHM 305. Offered Fall, Spring, Summer.

CHM 309 Cr.3

Physical Chemistry Theory I

A study of real gases, equations of state, kinetic and molecular theory, properties of gases, molecular energies, classical thermodynamics, chemical equilibria, changes of state and reaction kinetics and mechanisms. Prerequisite: CHM 104; PHY 103 or PHY 203; PHY 104 or PHY 204; MTH 310 or concurrent enrollment. Offered Fall.

CHM 310 Cr.3

Physical Chemistry Theory II

Quantum mechanics, atomic and molecular spectroscopy, molecular structure, lasers, statistical thermodynamics, and other special topics are covered in this course. Prerequisite: CHM 309. Offered Spring.

CHM 312 Cr.3

Atmospheric Chemistry

This course is an overview of atmospheric chemistry including the ozone layer and ozone holes, tropospheric chemistry (both natural and the effects of air pollution), the greenhouse effect and the impact of human activities on climate change. It may also include topics related to urban and indoor air quality and means of generating energy that result in lower greenhouse gas emissions to the atmosphere. Prerequisite: CHM 300 or CHM 303. Offered Spring.

CHM 313 Cr.2

Physical Chemistry Laboratory

A laboratory course designed to teach, illustrate, and strengthen basic concepts in experimental physical chemistry. Topics include thermodynamics, kinetics, introductory spectroscopy, and occasional advanced topics in physical chemistry. Students will be exposed to current techniques and equipment used in investigating physical chemistry questions. An emphasis is placed on the development of proficiency in both oral and written scientific communication. Lab 6. Prerequisite: CHM 309. Offered Spring.

CHM 320 Cr.1-3

Practicum in Chemistry

A course designed for and adapted to the specific needs of select groups having specific interests in the applications of techniques and/or theories of chemistry, i.e., educational professionals, chemical technicians, medical technologists, etc. Lecture and laboratory will be adapted to the topic being taught. May be repeated for credit when different topic is presented. Prerequisite: to be determined - based on topic offered. Not applicable to a major in chemistry. Offered Occasionally.

CHM 322 Cr.4

Chemistry of Materials

This course introduces you to the world of materials science and the role that chemistry plays in both synthesis and applications of various materials. Students will begin with an overview of specific classes of materials such as metals, polymers, ceramics, semiconductors and carbon-based nanomaterials with a focus on commercially relevant systems. This knowledge will then be applied to understand composite materials and how they are used in specific applications such as fuel cells, batteries, solar cells and electrolyzers. A preliminary knowledge of organic nomenclature and analytical chemistry is a prerequisite. Laboratory exercises will be designed to complement your learning in lecture as well as augment skills in scientific writing. Lect. 3, Lab 3. Prerequisite: CHM 301; CHM 300 or CHM 303. Offered Spring.

CHM 323 Cr.2

Polymer Chemistry Laboratory

A practical introduction to the application of important techniques for polymer synthesis and characterization. Various polymerization approaches will be covered including bulk, solution and emulsion polymerization processes. Methods for analyzing molecular weights and molecular weight distributions will be employed. Instrumental techniques for the characterization of thermal, mechanical and surface properties of polymeric materials will also be emphasized. Lec. 1, Lab 3. Prerequisite: CHM 322. Offered Spring - Odd Numbered Years.

CHM 325 Cr.4

Fundamental Biochemistry

This course is the study of the fundamental chemical processes in biological systems emphasizing the structure and function of biological macromolecules, metabolism and the regulation of cellular processes, transport mechanisms, nature of biological energy, and applications to cellular and organismal function. Lect. 3, Lab 3. Prerequisite: CHM 300 or CHM 304 are required; a 300 or 400-level chemistry course with a lab (excluding CHM 461, CHM 489, and CHM 499) is recommended. Students with credit in CHM 417 cannot earn credit in CHM 325. Offered Fall, Spring.

CHM 330 Cr.3

Industrial Chemistry

An overview of both the scientific and commercial aspects of the chemical industry. Industrially important chemical processes will be discussed. Topics will include production and end use of basic inorganic chemicals of commercial importance, industrial gases, and petroleum-based products. The economics of various chemical processes will be presented. Global and local topics such as regulatory compliance, product liability, and patent/trade secret documentation may also be discussed. Prerequisite: CHM 300 or CHM 303. Offered Spring - Even Numbered Years.

CHM 331 Cr.3

Fundamentals of Inorganic Chemistry

This is a foundational course in inorganic chemistry intended to provide exposure to and understanding of the composition, structure, bonding properties and reactivity of inorganic compounds. Prerequisite: grade of "C" or better in CHM 104. Offered Fall.

CHM/BIO/PHY 356 Cr.2

Curriculum and Assessment in Math and Science

Students are introduced to state and national content standards and related theories on teaching and learning. They will apply this knowledge to develop a curricular framework. Topics will include: Learning outcomes, student misconceptions, balanced assessment, and lesson planning in the content areas. Prerequisite: declared math or science education major/minor; admission to teacher education. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Offered Fall.

CHM 361 Cr.3

Radiochemistry

A study of the decay of radioactive elements, detection of radiation, methods of analysis and applications such as neutron activation and radioactive dating. Lect. 2, Lab 2. Prerequisite: three semesters of chemistry courses. Students with credit in CHM 461 cannot earn credit in CHM 361. Offered Occasionally.

CHM 403 Cr.3

Advanced Organic Chemistry

Advanced topics in organic chemistry, including reaction mechanisms, molecular orbital theory, conservation of orbital symmetry, pericyclic reactions, photochemistry, aromaticity, stereochemistry, kinetics, isotope effects, linear free energy relationships, hard-soft acid-base theory, and selected examples of recent advances in synthetic organic chemistry. Prerequisite: CHM 304. Offered Fall - Even Numbered Years.

CHM 405 Cr.2

Advanced Organic Synthesis

This is an advanced course in organic chemistry intended to provide students with organic synthesis techniques that can be applied to other chemically-related fields. Synthesis, characterization, and separation techniques will be applied to organic compounds. Instrumental techniques such as nuclear magnetic resonance, infrared spectroscopy, gas chromatography, and mass spectrometry will be utilized, and appropriate use of chemical literature will be included. Prerequisite: CHM 305 or grade of "B" or better in CHM 302. Offered Fall - Odd Numbered Years.

CHM 407 Cr.3

Biophysical Chemistry

A study of the physical principles that drive the structure and behaviors of biological molecules. Topics include the relationship between the properties of biomolecular building blocks and macromolecular structure; application of different physical models (thermodynamic, quantum mechanical, statistical mechanical) to macromolecular structure and behavior; application of physical techniques (spectroscopy, calorimetry, etc.) to the characterization of macromolecular structure and behavior. Prerequisite: CHM 417 or CHM 325; MTH 207; MTH 208 or MTH 265 or concurrent enrollment; PHY 103 or PHY 203; PHY 104 or PHY 204. Offered Spring.

CHM 412 Cr.3

Aquatic and Soil Chemistry

This course examines the role of chemistry in shaping our environment, focusing specifically on aquatic and terrestrial systems. Students will learn how to apply fundamental chemical principles to complex real systems in order to characterize environmental behavior. Learning to understand and predict the fate of organic and inorganic pollutants in soil-water systems will be emphasized. Special topics that relate to current events will also be explored, and the connection between environmental issues and social/economic challenges will be examined. Prerequisite: CHM 300 or CHM 303. Offered Fall.

CHM 413 Cr.2

Environmental Chemistry Laboratory

This course is an exploration of chemical reactivity and measurement in atmospheric, terrestrial, and aquatic ecosystems. Students collect and analyze samples and perform experiments that validate major environmental topics. Lab experiments include measurement of the physical/chemical properties of air, water, and soil relative to environmental standards and toxic thresholds, as well as investigations of the chemistry of greenhouse gases, contaminants, indoor pollution, and acid rain. Lab 4. Prerequisite: CHM 300 or CHM 303 or CHM 301. Offered Fall.

CHM 417/517 Cr.4

Biochemistry I: Macromolecules

This course is the study of the structure and function of biological macromolecules with special emphasis on proteins. Topics include protein folding, protein-ligand interactions, protein function, and membrane structure and function. The laboratory focuses on contemporary biochemical techniques including quantitative biochemical assays, ligand binding, protein purification, and enzyme function. Lect 3, Lab 3. Prerequisite: "C" or better in CHM 300 or CHM 304 is required; a 300 or 400-level chemistry course with a lab (excluding CHM 461, CHM 489, and CHM 499) is recommended; junior standing. BIO 315 or MIC 425 also recommended. Students with credit in CHM 325 cannot earn credit in CHM 417. Offered Fall.

CHM 418 Cr.3

Biochemistry II: Metabolism and Genetic Information

This course provides a comprehensive and integrative approach to fundamental metabolism and the flow of genetic information. In particular, the course emphasizes the chemical principles governing metabolite inter-conversions, energy flow, regulation of metabolic pathways, and the maintenance of genetic information. Prerequisite: "C" or better in CHM 417; junior standing. BIO 306 and BIO 315, or MIC 416 and MIC 425 recommended. Offered Spring.

CHM 419 Cr.3

Advanced Biochemistry Lab

A capstone biochemistry laboratory course that provides students with the opportunity to undertake hypothesis-driven research. Students will use a variety of contemporary biochemical and biophysical techniques to study biomolecular structure and function. As the capstone course in the biochemistry major, students will give written and oral reports of their work that incorporate the primary literature. Lect. 1, Lab 6. Prerequisite: "C" or better in CHM 417; CHM 418 or concurrent enrollment; junior standing. Offered Spring.

CHM 421/521 Cr.1-3

Advanced Topics in Chemistry

An advanced topic in chemistry based on appropriate prior work in physical chemistry, organic chemistry, inorganic chemistry, and analytical chemistry. Lecture and laboratory will be adapted to the topic being taught. May be repeated for credit when different topic is presented. Repeatable for credit - no maximum. Prerequisite: determined based on topic offered and will include a minimum of three semesters of chemistry courses; junior standing. Offered Occasionally.

CHM 424 Cr.3

Spectroscopy

A survey of important spectroscopic methods used in chemistry; infrared and ultraviolet, proton and carbon-13 NMR, and mass spectrometry. Theory and practice of techniques are covered. Emphasis is placed on structure determination of organic molecules. Analysis of dynamic systems and mixtures may also be covered. Lect. 2, Lab 3. Prerequisite: CHM 300 or CHM 304; junior standing. Offered Spring - Even Numbered Years.

CHM 431 Cr.2

Inorganic Synthesis and Methods

This course is designed to cover the synthesis, characterization methods, and applications of inorganic-based materials. The techniques presented are immersed in numerous areas of chemistry disciplines ranging from inorganic to organic, analytical to nuclear, materials to physical, and even environmental to biochemistry. Both air-stable and air-sensitive methods will be covered and applications to real world situations will be the foundation for this course. Lab 6. Prerequisite: CHM 331 or concurrent enrollment; one 300-level laboratory course from CHM 301, CHM 302, CHM 305, CHM 313, CHM 322, or CHM 325. Offered Fall.

CHM 441 Cr.4

Instrumental Analysis

A study of the theory and principles of chemical instrumentation including the application of basic electronics, spectroscopy, separation science and electroanalytical methods of chemical analysis. Lect. 3, Lab 3. Prerequisite: CHM 301; junior standing. Offered Fall.

CHM 445/545 Cr.3

Biochemistry of Antimicrobials

A survey of the biochemistry and chemistry of drugs used to treat infectious diseases, including antibiotics, antivirals, antifungals, and anti-parasitic drugs. This course surveys biochemical mechanisms of action of clinically used antimicrobials, biochemical mechanisms of antimicrobial resistance, the biosynthesis of antimicrobials by microorganisms, chemical synthesis of antimicrobials, and approaches for the discovery of new antimicrobials. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 203 or BIO 315 or MIC 230; CHM 325 or CHM 417; junior standing. Offered Spring.

CHM 450 Cr.1-2

Internship in Chemistry or Biochemistry

This course is an academically relevant field experience in chemistry or biochemistry within government, industry, business, or community agencies. Students must have their internships approved and be advised by the department. Students must be on their internship worksite during the semester for which they are registered for academic credit. Credits earned will count only toward university electives and not toward the completion of any major or minor. Repeatable for credit - maximum four. Consent of department. Pass/Fail grading. Offered Fall, Spring, Summer.

CHM/BIO/MTH/PHY 451 Cr.2

Curriculum and Content in Science and Mathematics

This is a methods course for science education and mathematics education majors that focuses on how content knowledge and pedagogical content knowledge are used to inform instruction. The course will focus on exploration of state and national standards, academic language, and methods of assessment. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/MTH/PHY 454 or BIO/CHM/MTH/PHY 455; admission to teacher education. (Cross-listed with BIO/CHM/MTH/PHY; may only earn credit in one department.) Consent of instructor. Offered Spring.

CHM/BIO/PHY 452 Cr.2

The Learner and Learning in Science

This is a methods course for science education majors that focuses on learning theories, equitable practices, and culturally relevant pedagogy. The course will draw on recommendations from state and national standards. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/MTH/PHY 454 or BIO/CHM/MTH/PHY 455; admission to teacher education. (Cross-listed with BIO/CHM/MTH/PHY; may only earn credit in one department.) Consent of instructor. Offered Fall.

CHM/BIO/PHY 454 Cr.2

Field Experience I in Science Education

This course is the first field experience in a school environment. Candidates will plan and teach lessons within the designated grade range of 4-12. Candidates will be introduced to classroom management and conflict resolution. A multi-day, consistent schedule in the middle or high school field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/PHY 451 or BIO/CHM/PHY 452; admission to teacher education. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Consent of instructor. Offered Fall, Spring.

CHM/BIO/PHY 455 Cr.2

Field Experience II in Science Education

This course is the second field experience in a school environment. Candidates will plan and teach lessons within the designated grade range of 4-12. Candidates will be introduced to classroom management and conflict resolution. A multi-day, consistent schedule in the middle or high school field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/PHY 451 or BIO/CHM/PHY 452; admission to teacher education. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Consent of instructor. Offered Fall, Spring.

CHM 461 Cr.4

Nuclear Chemistry

A study of the decay of radioactive nuclides with emphasis on the theory of nuclear decay. Laboratory will include the study of the detection of radiation, methods of radio analysis and the safe handling of unsealed radioactive sources. Lect. 3, Lab 3. Prerequisite: four semesters of chemistry courses; junior standing. Students with credit in CHM 361 cannot earn credit in CHM 461. Offered Spring.

CHM/BIO/PHY 469 Cr.4

Teaching and Learning Science in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in science. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: GEO 200; EDS 351. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Offered Fall, Spring.

CHM 487 Cr.1

Peer Instruction and Learning in Chemistry

A structured course designed to introduce chemistry education majors and minors (Early Adolescence-Adolescence) to the proper methods of delivering general chemistry concepts to undergraduate students in CHM 103 and CHM 104. Repeatable for credit - maximum two. A maximum of two credits may be applied to the chemistry education major (Early Adolescence-Adolescence). A maximum of one credit may be applied to the chemistry education minor. Prerequisites: CHM 301; chemistry education (EA-A) major or minor plan; chemistry department consent. Consent of department. Offered Fall, Spring.

CHM 489 Cr.1-2

Independent Study

Independent study/research under the direction and supervision of a member of the chemistry faculty. Repeatable for credit - maximum two. Consent of department. Offered Fall, Spring, Summer.

CHM 499 Cr.1-2

Research

Laboratory research under the direction and supervision of a member of the chemistry departmental staff for selected students. A written or oral report will be required. Repeatable for credit - maximum six. Consent of department. Offered Fall, Spring, Summer.

Child/Youth Care (CYC) - Courses

Courses

CYC 301 Cr.3

Overview of Child and Youth Care

As the overview course in the child and youth care minor, the class addresses current issues in the field of child and youth intervention. Taking a multidisciplinary approach, students will explore factors that place children and youth at risk. The class also provides a preliminary investigation of systems theory, program design, interventions, and advocacy. Prerequisite: grade of "B" or better in PSY 212. Offered Annually.

CYC 310 Cr.3

Social Policy for Children and Families

This course is designed to examine current and proposed child and family policies. Specifically, the goals of the course are to enhance students' understanding of (a) the basics of child and family development and the complex nature of childhood risk and resilience; (b) current policies and safety net programs, particularly in the areas of child protection and family strengthening, their evolution over time, and their strengths and weaknesses; (c) recent reform efforts and new directions in policy; and (d) building community connections. Prerequisite: grade of "C" or better in CYC 301; PSY 212. Offered Annually.

CYC 411 Cr.3

Family Systems Theory

This course focuses on the study of the family as a system. Students will examine developmental stages, life cycle patterns, and family interactions using a systems framework. The application of family systems theory to at-risk families will be discussed. Prerequisite: PSY 212. Offered Annually.

CYC 495 Cr.3

Capstone in Child Youth Care

This course is designed to review and unify basic concepts regarding the care of children and youth, particularly those considered "at-risk." Particular emphasis will be on the multi-level factors that impact the well being of children and youth, ethics and legal issues, diversity, and program assessment. A systems approach for understanding the vulnerable or at-risk youth will provide a broad framework and the course will be taught from a problem-based learning perspective. Prerequisite: grade of "C" or better in CYC 301; junior standing; minimum of 18 credits of the CYC minor course work completed. Offered Annually.

Chinese (CHI) - Courses

Courses

CHI 100 Cr.1

Basic Spoken Chinese

This is a one-credit course designed to introduce the fundamentals of spoken Chinese. This course will focus solely on speaking and listening in Chinese and will not teach written Chinese. All vocabulary and texts will be in the standard Romanization of Chinese (Pin Yin). The goal of this course is to familiarize students with the Chinese pronunciation system and to carry on simple conversations on topics related to college and daily life. Offered Spring.

CHI 101 Cr.4

Chinese in a Global Society I

The first of two introductory courses, this course familiarizes students with the Chinese pronunciation and writing systems and develops their basic communicative competence in the four skills of listening, reading, speaking, and writing. It also develops students' cross-cultural awareness while building communicative strategies. Offered Fall.

+CHI 102 Cr.4

Chinese in a Global Society II

This course further develops basic communicative competence in the four skills of listening, speaking, reading, and writing. It also develops students' cross-cultural awareness while building their communicative strategies. Prerequisite: CHI 101 or placement. Offered Spring.

+CHI 201 Cr.4

Chinese Language and Culture in Action I

This course continues to develop students' communicative competence in the four skills of listening, reading, speaking, and writing. It also develops students' cross-cultural awareness and competence while building communicative strategies. Prerequisite: CHI 102 or placement. Offered Fall.

+CHI 202 Cr.4

Chinese Language and Culture in Action II

The second of two intermediate-level Chinese courses, this course continues to develop students' communicative competence in the four skills of listening, reading, speaking, and writing. It also develops students' cross-cultural awareness and competence while building their communicative strategies. Prerequisite: CHI 201 or placement. Offered Spring.

CHI 301 Cr.3

Advanced Chinese

This is a Chinese language course for intermediate level learners who have completed CHI 202 or equivalent. Its aim is to help students continue to develop communicative competence in the four skills of listening, speaking, reading, and writing the Chinese language. While linguistic aspects of the Chinese language are the primary focus, introduction to the social and cultural background of the language will also form an important part of the course. Prerequisite: CHI 202 or equivalent. Offered Fall.

+CHI 305 Cr.3

Introduction to Modern Chinese Literature

This course provides a general survey of the most important Chinese writers of the 20th century and their works. Literary works are discussed in their social, cultural, and historical contexts. Taught in English and based entirely on translated texts, the course is ideal for students with little or no Chinese background who are nevertheless drawn to one of the most vibrant literary cultures in the world. Offered Spring - Even Numbered Years.

CHI 315 Cr.3

Business Chinese

This course is aimed to enhance students' language skills in a business context and to promote their understanding of culture and the business environment in contemporary China. Intensive practice in oral comprehension, speaking, writing, utilizing special, topical vocabulary related to international commerce and interaction in a variety of business settings. Prerequisite: CHI 202 or equivalent. Offered Fall - Even Numbered Years.

+CHI 320 Cr.3

Introduction to Chinese Civilization

This is a survey course covering the development of Chinese civilization from the beginnings to the 20th century. It introduces the evolution and continuities of this ancient culture seen through the lens of philosophy, religion, ritual, social relations, institutions, and achievements. This course is taught in English for students who want a basic appreciation of this important non-Western culture. No experience with the Chinese language or culture is required. Offered Spring - Odd Numbered Years.

CHI 326 Cr.1

Current Events

A weekly discussion of current events in the Chinese-speaking world, based on readings, web-based news sources and television broadcasts in English. Students may take as many times as desired, but only three credits will count towards major/minor. Consent of instructor. Offered Fall, Spring.

CHI 398 Cr.1-3

Directed Studies

Individual reading and investigations in advanced Chinese study. Course materials will vary according to the needs and interests of students. Repeatable for credit - maximum six. Prerequisite: CHI 202 or equivalent. Offered Occasionally.

Clinical Laboratory Science (CLI) - Courses

Courses

CLI 120 Cr.1

Introduction to Clinical Laboratory Science

An introductory course designed for students who are interested in a profession in clinical laboratory science. The course will introduce the students to the technical and clinical functions of the profession as well as to the professional aspects of clinical laboratory science. An introduction to the profession, basic laboratory math, medical terminology, and diagnostic tests evaluated in the clinical laboratory will be discussed. Students will develop an understanding for the critical role clinical laboratory scientists play in the health care arena. Offered Spring.

CLI 395 Cr.2

Urinalysis and Body Fluids

This course introduces the formation, distribution, and function of urine and other nonblood body fluids. Instruction in the handling and analysis of these fluids will be given based on their chemical, physical, and cellular composition in health and disease. The laboratory focuses on performing and interpreting results from the clinical laboratory procedures performed in the lab. Lect. 1, Lab 2. Prerequisite: admission to Clinical Lab Science Program. Offered Spring, Summer.

CLI 410 Cr.3

Clinical Hematology

Introductory course in hematology which examines normal hematologic physiology, cellular development, and hemostasis in the human. Introduction to pathophysiology, with emphasis on clinical and laboratory evaluation of hematologic status. Theory and background of laboratory procedures used in the diagnosis and treatment of hematologic and other diseases are included. Emphasis is on peripheral blood cell morphology, hematopoiesis, maturation, and kinetics. Pathophysiology of hematologic disorders, including anemias and hematologic malignancies are explored. Manual laboratory techniques as well as instrumentation will be included in the laboratory portion. Complete blood counts, correlation of automated and manual differentials and routine coagulation testing also will be performed. Lect. 2, Lab 2. Prerequisite: admission to Clinical Lab Science Program. Offered Fall.

CLI 420 Cr.3

Immunohematology

Course covers the general aspects of the Blood Group System, red cell types and group systems, antibody screening, compatibility testing, blood donor service, selection of donors, blood drawing, storage, and preservation, components, records, and regulations for blood banks. The laboratory section includes performance of blood bank procedures, donor processing, compatibility testing, component preparation, antibody screening, and antibody identification. Lect. 4, Lab 6. Prerequisite: admission to Clinical Lab Science Program. Offered Summer.

CLI 440/540 Cr.1

Clinical Parasitology

Course covers important parasites of humans including zoonoses and emerging parasitic diseases. Life cycles, clinical features and infective diagnostic stages will be included in the lecture component. The laboratory will include demonstrations and diagnostic procedures. This course will provide the necessary pre-clinical competencies required for advancement to the clinical education component of the Clinical Laboratory Science Program. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 1, Lab 2. Prerequisite: MIC 230; admission to Clinical Lab Science B.S. Program or the Clinical Microbiology M.S. Program or consent of the instructor. Not open to students who have earned credit in BIO 406/506. Offered Spring.

CLI 450 Cr.6

Clinical Chemistry

This course focuses on chemical analysis performed in the clinical laboratory. The correlation between the organ systems, the clinical laboratory procedures, and human disease states is presented. Discussion of areas unique to clinical chemistry laboratory related to evaluation and validity of test results is emphasized. Laboratory rotation applies the principles of clinical chemistry and their relationship to the performance of analytical procedures and management of the clinical chemistry laboratory. Six-week rotation. Prerequisite: admission to Clinical Lab Science Program; acceptance to a NAACLS accredited clinical lab science program. Offered Fall.

CLI 455 Cr.6

Clinical Hematology/Hemostasis

Course extends concepts and skills learned in CLI 395 and CLI 410. Advanced theory in hematology to include abnormal and malignant processes, applications of flow cytometry and special stains, the diagnosis of classification of leukemias, troubleshooting instrumentation and interpretation of scatterplots. Hemostasis concepts, selection of appropriate tests and interpretation of results and diagnosis of coagulation disorder as well as advanced body fluid morphology will be covered. Students will gain experience processing and analyzing patient specimens with a wide variety of complex procedures as well as instrumentation. Students will also expand their identification and diagnostic skills on microscopic analysis of hematology and body fluid specimens. Six-week rotation. Prerequisite: CLI 395 and CLI 410; admission to Clinical Lab Science Program; acceptance to a NAACLS accredited clinical lab science program. Offered Fall.

CLI 460 Cr.6

Clinical Immunohematology

Course extends concepts and skills acquired in CLI 420. Performance and interpretative skills in ABO and Rh typing, antibody detection and identification techniques, hemolytic disease problems, quality assurance management, solving patient's blood compatibility problems, histocompatibility techniques and selection of appropriate blood products for various bleeding disorders will be expanded. Six-week rotation. Prerequisite: CLI 420; admission to Clinical Lab Science Program; acceptance into a NAACLS accredited clinical lab science program. Offered Spring.

CLI 461 Cr.1

Capstone in Clinical Laboratory Science

The course covers topics of current interest in the field such as emerging infectious diseases and testing, new concepts in instrumentation, and evolution of new tests from basic research to clinical application. Students also will learn and practice basic skills such as resume and cover letter writing. Students will participate in curriculum selection for part of this class to help them prepare for pre-clinical competency exams at their hospital sites. Prerequisite: acceptance to an internship site; senior standing; clinical lab science major. Offered Summer.

CLI 465 Cr.2

Clinical Immunology

Course in the application of immunologic and serologic techniques used for the specific diagnosis of immunodeficiency diseases, malignancies of the immune system, autoimmune disorders, hypersensitivity states and infection by specific microbial pathogens. Laboratory rotation applies concepts from lecture. Experience is gained in clinical immunological techniques, methods, and management of antigen-antibody reactions and identification of the relationship to disease states. The rotation also includes the fundamentals of HLA testing and Flow Cytometry techniques with interpretation of results. Two-week rotation. Prerequisite: admission to Clinical Lab Science Program; acceptance into a NAACLS accredited clinical lab science program. Offered Fall, Summer.

CLI 470/570 Cr.8

Diagnostic Microbiology

This course provides an in depth study of the major groups of pathogenic bacteria, fungi, parasites, and viruses and their relationship to human disease. Topics include clinical signs and symptoms of these diseases, proper method of collecting, transporting, and processing appropriate clinical specimens, modes of transmission, and state-of-the-art laboratory methods used for the identification of these pathogens and diagnosis of the diseases they cause. Principles of theory will be applied in rotation. Rotation provides students with opportunities to process a variety of patient specimens and gain experience with a wide variety of state-of-the-art procedures and equipment for the isolation and identification of pathogenic bacteria, fungi, protozoa, helminths, and viruses. Molecular diagnostic procedures will also be employed. Eight-week rotation. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CLI 440; admission to Clinical Lab Science Program; acceptance into a NAACLS accredited clinical lab science program. Offered Spring.

CLI 480/580 Cr.3

Laboratory Management and Education

A course designed to introduce senior students to skills and knowledge required to manage a clinical laboratory and educate future clinical laboratory scientists. Students will participate with lab managers in activities such as ordering supplies, quality control, quality management and quality improvement. They will be introduced to human resource management, financial management, scheduling issues, instrument selection for profitability and the processes involved in preparing for laboratory inspections and maintaining JCAHO and CAP laboratory accreditation. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: admission to Clinical Lab Science Program; acceptance to a NAACLS accredited internship site. Offered Fall.

CLI 484/584 Cr.2

Laboratory Management

This course will discuss laboratory management issues along with theory, practical application, and evaluation of principles/models. Development of critical thinking, problem solving, teamwork, communication, professionalism, research, management, and leadership skills will be emphasized. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CSH major; junior standing. Offered Spring.

CLI 495 Cr.1-3

Independent Study in Medical Laboratory Science

Individual reading or research under the guidance of a clinical laboratory science instructor. Repeatable for credit - maximum six. Prerequisite: admission to Clinical Lab Science Program; approval of program director and instructor. Consent of instructor. Offered Occasionally.

CLI 496 Cr.1-3

Special Topics in Clinical Laboratory Science

Workshop or seminar on selected topics in the practice of clinical laboratory science. Student may select seminar based upon objectives and needs. Repeatable for credit - maximum six. Prerequisite: admission to clinical lab science program; approval of program director. Consent of instructor. Offered Occasionally.

CLI 499 Cr.1-3

Independent Research in Clinical Lab Science

An opportunity to pursue individual research topics under the direction of a faculty member. Depending on the nature of the research project, study is expected to involve substantial laboratory or theoretical work in addition to literature review and instruction. Students are expected to develop research skills related to clinical laboratory science. In addition to a written report to the supervising faculty member, expected outcomes may include: laboratory notebooks, experimental devices, software, papers and presentations to department and regional meetings. Repeatable for credit - maximum six. Consent of instructor. Offered Occasionally.

Communication Studies (CST) - Courses

Courses

+CST 110 Cr.3

Communicating Effectively

This course introduces students to key communication concepts and skills that will encourage them to become more competent and culturally sensitive communicators. Students will develop speaking, relational and listening skills as they explore interpersonal, group/team and public communication topics. This course will help students become more effective and ethical communicators in a highly diverse society. Offered Fall, Spring, Summer.

CST 190 Cr.3

Introduction to Communication Studies

An introduction to the professional study of communication, including detailed exploration of factors involved in the communication process, effects of media on the communication process, and the importance of the communication process in intrapersonal, interpersonal, small group, organizational, and intercultural contexts. Prerequisite: CST 110. Offered Fall, Spring.

CST 210 Cr.3

Presentational Speaking

This course is designed to enhance students' abilities in developing, delivering, and evaluating oral informative and persuasive presentations. In doing so, the focus of theoretical discussion and practical application will be on the use of audience analysis in adapting to presentational situations, source material in developing oral messages, effective organizational designs, oral rather than written language style, advanced presentational aids including media technology, enhanced vocal and physical presentational skills, and appropriate criteria for evaluation. Prerequisite: CST 110. Offered Occasionally.

CST 211 Cr.3

Communication and Civic Engagement

The world is full of so many problems; how can one person hope to make a positive change? Communication and Civic Engagement will answer this question, both in theory and in practice. The course surveys basic concepts of rhetoric, or persuasive symbol use, and their intersection with civic life. Students will engage with principles of deliberative public discourse and dialogue to explore the meanings and responsibilities of engaged, civil, public citizenship. Focus is placed on recognizing, analyzing, and constructing arguments and dialogues in the public sphere. Course principles will be enacted through a semester-long civic engagement project in which students will be empowered to make meaningful change in their own communities. Prerequisite: CST 110. Offered Annually.

CST 230 Cr.3

Interpersonal Communication

This course is an introduction to the concepts, theories and research in the field of interpersonal communication. Interpersonal communication impacts our relationships with family members, friends, romantic partners, and coworkers. Special consideration is given to verbal and nonverbal messages and the meaning and impact they have on our relationships and our personal identities (e.g., gender, culture, ability, race, socioeconomic background). Prerequisite: CST 110. Offered Fall, Spring.

CST 260 Cr.3

Professional Communication

This course focuses on developing communication skills and learning communication principles important to an organizational setting. Students will improve essential verbal and nonverbal communicative skills that are needed to succeed in their careers. While studying organizational processes, students will enhance their abilities to plan and deliver professional information and persuasive messages, while incorporating presentational technology. Students will also learn how to conduct effective training sessions. Prerequisite: CST 110. Offered Annually.

+CST 271 Cr.3

Media and Society

This course explores media and their economic, social, political, and cultural implications in individual and social life. Students will have the opportunity to engage with concepts and theories relating to media industries and production, media audiences, media effects on social and cultural change, social and cultural issues created or sustained by media, critical analysis of media messages, and issues relating to evolving media technologies. Offered Fall, Spring.

CST 280 Cr.3

Introduction to Communication and Leadership

This course is an introduction to the study, skill and practice of leadership from a communication perspective. Students will take a variety of surveys and instruments in order to understand their unique leadership style and characteristics. Planning and practicing leadership will involve developing leadership skills, creating a vision, setting organizational tone, listening to organizational members, and overcoming obstacles to effective leadership. Prerequisite: CST 110. Offered Annually.

CST 299 Cr.1

Public Speaking Center Tutor Practicum

The course will include an overview of research and theory on communication centers, a review of public speaking best practices, and examination of strategies for facilitating consultations with various client populations. Based on readings, classroom application exercises, reflections, and discussions, peer consultants will develop skills in facilitating one-on-one consultations, providing constructive criticism, and guiding student-speakers through meaningful revision. Students should take this course during their first semester of work in the Public Speaking Center. Students who repeat the course will engage more deeply with the content and be expected to take on leadership roles. Repeatable for credit - maximum three. Prerequisite: CST 110. Consent of instructor. Pass/Fail grading. Offered Annually.

CST 301 Cr.3

Theories of Communication

A survey of theories used in the field of communication studies. Consideration is given to theories that explain communication behavior in interpersonal, group, public, media, intercultural, and gendered contexts. The role of theory in research is examined through the development of a theory driven review and synthesis of communication literature. Prerequisite: CST 190; sophomore standing. Offered Fall, Spring.

CST 310 Cr.3

Debate

An introductory course covering the concepts, formats and strategies of debating. Emphasis is on the development of personal skills of argumentation. Prerequisite: CST 110. Offered Occasionally.

CST 315 Cr.3

Communication Criticism

Communication criticism, a fundamental practice in communication studies, describes, explains and evaluates why messages succeed or fail in achieving their intended purposes. Participants learn to conduct systematic analysis of persuasive messages to describe their key elements: language, organization, content, persuasive communication strategies, visual images, and choice of medium. Analysis is used to explain why particular elements were used in adapting messages to intended audiences and specific cultural contexts of those messages. Participants apply various qualitative methods of communication criticism to significant cultural discourse, such as speeches, commercials, public service announcements, and webpages to evaluate messages for effectiveness, ethical acceptability, cultural impact, and aesthetic value. Prerequisite: CST 190. Offered Annually.

CST 321 Cr.3

Conflict Management and Negotiation

The course explores conflict and negotiation theories as well as strategies across several communication contexts including interpersonal, group, organizational, public, and cross-cultural. Particular attention is given to how conflict can be resolved communicatively through negotiation strategies. Additionally, students will develop practical conflict and negotiation skills. Prerequisite: CST 190 or junior standing. Offered Occasionally.

CST 322 Cr.3

Communication and Sport

This course will examine sports discourse from a broad communication perspective. The course is designed to unpack sports discourse, messages, the sports industry, and organizations using a variety of communication concepts and theories. Students in this course will learn to evaluate and develop arguments about representations of athletes, organizations, and other sports media figures. Prerequisite: CST 190. Offered Occasionally.

CST 330 Cr.3

Nonverbal Communication

This course is designed to explore the various dimensions of nonverbal communication in human interaction. Students will learn and practice nonverbal communication skills (e.g., interviewing, deciphering), examine research on the functions of nonverbal communication (e.g., expressing emotions, sending relational messages), and explore how the different nonverbal cues (e.g., touch, eye behavior) affect human communication. Prerequisite: CST 190. Offered Occasionally.

CST 331 Cr.3

Communicating Social Support

This course focuses on the task, relationship, and identity factors in constructing social support messages in interpersonal relationships. Based on work by communication scholars, this class will focus on theoretical and experiential applications to various kinds of support messages, including physical, emotional, and identity support. Focus on both support seeking and support offering will be examined from multiple communication perspectives. Prerequisite: CST 190. Offered Occasionally.

CST 332 Cr.3

Intercultural Communication

The primary objective of this course is to provide an overview of the study of cultures and their effects on communication. Cultural, socio-cultural, psychocultural and environmental influences will be explored in terms of how they affect the communication process. Communication behavior (both verbal and nonverbal) will be examined to determine its role in other cultures. Students will learn to communicate more competently with people from other cultures and ethnic groups. Prerequisite: CST 190 or CST 230. Offered Occasionally.

CST 333 Cr.3

Lying and Deception in Human Interaction

An in-depth exploration of the pervasive communicative phenomenon of deception and lying. This course explores the varieties of deceptive communication and their causes and consequences in a wide range of contexts, including romantic relationships, cyberspace, criminal justice, advertising, mass media, and politics. Particular attention will be given to opportunities and pitfalls in identifying potentially deceptive behavior. Prerequisite: CST 190 or permission of instructor. Offered Occasionally.

CST 334 Cr.3

Gender Communication

Explores theory and practice of communication across boundaries of gender, sexuality and sexual identities. Focuses on social construction of gender, and the communicative performance of gender across inter-sectional lines, such as race, ethnicity, social class, and sexual identities. Encourages the critique of communication as it establishes and normalizes certain gender identities and performances over others. Fosters critical thinking of identity and social construction of self. Prerequisite: CST 230 or RGS 100. Offered Fall, Spring.

CST 336 Cr.3

Family Communication

Family relationships are formed, maintained, and negotiated through communication, and this course uses communication theories and concepts to deepen our understanding of families. Topics may include diverse family types, power, families as systems, conflict, family stories and rituals. Overall, this course provides a theoretical and conceptual examination of families while broadening our cultural understanding of family relationships. Prerequisite: CST 190 and CST 230. Offered Fall, Spring.

CST 337 Cr.3

Communication and Race

Human understanding of ethnicity and race is established, maintained, and changed by communication. Therefore this course uses a communication perspective to examine interpersonal and mediated messages about race. From the perspective of communication studies, ethnicity and race are continuously defined, interpreted, and acted out as we communicate with one another on a daily basis in all contexts. This course introduces students to communication research on ethnicity, race and other aspects of identity such as gender and class. This course also provides exposure to related research in other disciplines. Prerequisite: completion of at least nine credits in communication studies, excluding CST 110. Offered Occasionally.

CST 338 Cr.3

Media and Sexuality

This course examines the role media play in constructing, disseminating, and influencing images and understandings of sexuality. The course will use media studies research and theory to explore representational practices along with their relationship to industry conventions, media texts, and user engagements. Students will learn the principles of media studies approaches to sexuality studies, particularly as they relate to LGBT Studies and Queer Theory. They will also gain a better understanding of the history of media representations of sexuality and their relationship to particular moments in social, political, cultural, and economic history. Particular attention will be placed on how sexual identities intersect with and shape other categories of identity (including gender, race, ethnicity, class, ability, etc.). Prerequisite: CST 190 or CST 271 or RGS 100. Offered Occasionally.

CST 339 Cr.3

Communication and Aging

This course will examine existing and emerging research within communication and aging studies and emphasize an interpersonal life-span approach toward understanding the social interaction that occurs in later life. Issues that affect older people such as work, leisure, retirement, media use, health, death and dying and family and personal relationships will be explored. Barriers such as sight, hearing, cognitive impairments, memory, language and touch will be examined as they affect older adults when communicating with others. This course will offer both a theoretical and applied perspective to aging and communication. Students also will learn how to be an advocate for older adults who are unable to care for themselves. Prerequisite: CST 110. Offered Occasionally.

CST 350 Cr.3

Organizational Communication

Analysis of traditional and contemporary theories of communication in the context of modern complex organizations. Emphasis is placed on how communication serves to create and recreate formal and informal organizational structures. Particular attention is paid to the theoretical approaches to organizational communication that can be used to describe, analyze, and offer solutions to organizational communication challenges. Prerequisite: CST 190. Offered Fall, Spring.

CST 351 Cr.3

Interviewing: Principles and Processes

This course is designed to enhance understanding of and participation in a range of interviews that occur in our society. Students will increase their proficiency by participating in interviews, both as interviewers and interviewees. Emphasis is placed on learning effective communication skills and practicing important communication principles inherent in the following forms of interviews: employment (including cover letters, resumes, and portfolios), performance reviews, information gathering and persuasive. Students will also learn how to critically examine interview behaviors. Prerequisite: CST 190 or CST 230 or CST 260; declared communication studies major or minor. Offered Fall.

CST 353 Cr.3

Workplace Relationships

This course is designed to enhance students' understanding of the multiple workplace relationships employees may experience in their organization. Students are introduced to types and flows of workplace communication, the relationship of employees to their organization, dyadic workplace relationships, as well as functions and dysfunctions of workplace relationships. Particular emphasis is placed on understanding workplace relationships through experiential learning, engaging in case studies and reflections, and reading existing literature. Students leave the course with the ability to explain and navigate the development, maintenance, and dissolution of multiple workplace relationships. Prerequisite: CST 110. Offered Occasionally.

CST 354 Cr.3

Health Communication

This course provides students with basic knowledge and skills essential for communicating in the health and medical professions. Topics include the role of interpersonal, group, organizational, and intercultural communication in health care, ethical and legal aspects of health communication, and communication strategies for encouraging patient/client compliance and working with special needs patients. Prerequisite: CST 110. Offered Fall.

CST 355 Cr.3

Diversity and Organizational Communication

This course will explore how issues of diversity such as race, ethnicity, physical and mental ability, sexual orientation, gender, socioeconomic background, age, religion and veteran status impact communication in modern organizations. As organizational life becomes increasingly complex, it is vital to understand how diversity affects relationships at work with superiors, subordinates, coworkers, and the organization's customers or clients. Diversity will be treated not only as a potential site for communication challenges and misunderstandings, but also as an opportunity to enrich organizational culture, organizational decision making, and overall employee job satisfaction. Offered Occasionally.

CST 358 Cr.3

New Media and Technologies in Modern Organizations

This course will enhance students' understanding of new and emerging information and communication technologies (ICTs) being used in modern organizational settings. Students will be introduced to a number of emerging ICTs and will learn to use them effectively, appropriately, and ethically within the context of a workplace environment. Particular emphasis is placed on professional communication as organizational members communicate and collaborate in the workplace. Through hands-on learning, students will develop necessary skills and theoretical perspectives for communicating in our modern organizations. Prerequisite: CST 260. Offered Annually.

CST 360 Cr.3

Public Relations

This course is an introduction to the field of public relations. The course will cover topics that include a history of the practice of public relations, the understanding of various publics and their needs, the importance of the management of public opinion, and the techniques and channels used to communicate messages and manage relationships with relevant publics. Students will actively engage in the practice of public relations through the application of principles essential to the field. Prerequisite: CST 190. Offered Occasionally.

CST 365 Cr.3

Communication in Teams

In this course, students will study group and team communication theories and processes by observing and participating in teams. As team members, students will apply communication theory to enhance their effectiveness as team members and leaders. Prerequisite: CST 110. Not open for credit to students who have completed or are enrolled in PSY 343. Offered Annually.

CST 371 Cr.3

Media Industries and Audiences

This course is designed to enhance students' understanding of both media industries and media audiences. Through a combination of history, theory, and method the course explores the various ways that media industries and audiences operate, as well as how they are constructed and studied. Ultimately, this course connects the creation, dissemination, and consumption of media goods to larger social, political, economic, and cultural issues. It traces how ideas, attitudes, and information are created by media industries and consumed by media audiences and the larger impact this has on cultural formations. Prerequisite: CST 190 or CST 271. Offered Occasionally.

CST 377 Cr.3

Multimedia Production

This hands-on course will give students instruction on how to produce interactive and well-researched media messages and stories. Students will learn key concepts related to communicating through website design, podcasts, and video projects. Students will work in groups to develop websites that will showcase multimedia projects related to media theories, concepts, or issues. Course principles will be enacted through a semester-long website project in which students will learn to showcase their work to future employers. Prerequisite: CST 190 or CST 271. Offered Occasionally.

CST 378 Cr.3

Emerging Media and Communication Technology

This course offers an overview of the socio-technical, cultural, and psychological aspects of emerging media, exploring the characteristics of emerging media and their related technology, together with their effects on the process and dynamics of human communication and society. The dynamics of emerging media will be explored, including its relationships to a variety of communication contexts, including interpersonal, organizational, and public discourse. Students will read critical essays about Internet culture and theories of emerging media. Prerequisite: CST 190. Offered Annually.

CST 380 Cr.3

Communicating Leadership

An in-depth exploration of the communicative phenomenon of leadership. Theories and research methods used by noted communication and leadership scholars will be discussed and critiqued. Topics covered may include notions of leadership and organizations as places of leadership. Additional topics will focus on leaders as communicators, creators and sustainers of organizational culture, decision makers, change agents, and facilitators. Offered Annually.

CST 391 Cr.1-3

Practical Applications in Communication Studies

Provides opportunity for individual applied activities and projects that entail intensive use of developed communication skills and/or specialized knowledge based on communication coursework. Must be supervised by a CST faculty member. Registration requires approval from a CST faculty member willing to be the instructor of record. Students must complete paperwork with the faculty member and ensure academic application to the experience. Repeatable for credit - maximum three. Prerequisite: communication studies major or minor; completion of at least nine credits of communication studies courses above CST 110. Consent of instructor. Pass/Fail grading. Offered Annually.

CST 392 Cr.1-3

Practical Applications in Public Speaking Center Tutoring

This course is designed to offer supervision and course credit for Public Speaking Center peer consultants. Students will work regular hours in the Public Speaking Center and complete a project related to work in the Public Speaking Center. Projects include organizing and hosting a workshop, regular administrative work in the Public Speaking Center (such as web/social media work, hiring and recruiting, scheduling), or other positions within the Murphy Learning Center. Failure to complete a project within the course of the semester will result in a failing grade. Repeatable for credit - maximum six. Prerequisite: CST 110. Consent of instructor. Pass/Fail grading. Offered Fall, Spring.

CST 399 Cr.1-3

Independent Study in Communication Studies

Directed individual communication studies project under the supervision of a communication studies faculty member. May be a performance-oriented project or a research-based project to bring about a focused scholarly outcome. Project must include a final report as determined through consultation with supervising faculty. Project must be approved and supervised by a department faculty member and have prior consent of the executive committee of the department. Repeatable for credit - maximum three. Prerequisite: communication studies major or minor; completion of at least 12 credits of communication studies courses above CST 110; junior standing. Consent of department. Offered Annually.

CST 410 Cr.3

Argumentation

This course examines elements and strategies of argumentation. It focuses on evidence, reasoning, refutation, fallacies, strategies, and methods of argument analysis. Students practice individual and group argumentation, including parliamentary procedure. Prerequisite: junior standing. Offered Occasionally.

CST 412 Cr.3

Community Advocacy and Social Change

This course examines the communication dynamics involved when communities of people assemble, organize, and advocate to challenge injustice and oppression. Emphasis is placed on the persuasive rhetorical strategies used within and by social movements to raise consciousness, attract members, generate support, harness media resources, appeal to various audiences, and navigate counter-movements and suppression. Through examination of historical and contemporary examples, students will analyze, understand, and employ communication strategies directed toward social justice and change. The course will engage with a diverse range of American and/or international social movements and consider a wide variety of persuasive strategies and tactics. Prerequisite: CST 190; junior standing. Offered Annually.

CST 413 Cr.3

Persuasive Campaigns

This course presents contemporary theory and research in persuasion with a special focus on campaigns. Students will apply course material while organizing and implementing a persuasive campaign. This course examines the nature, role, and processes of communication campaigns and movements. Prerequisite: CST 190; junior standing. Offered Annually.

CST 415 Cr.3

Advanced Topics in Public Communication and Advocacy

Participants apply methods of communication criticism to significant examples of persuasive cultural discourse in order to identify and describe their persuasive strategies, explain why those strategies were used, and evaluate their effects, ethical acceptability, cultural impact and aesthetic value. Methods applied and types of persuasive cultural discourse analyzed vary depending on instructor's and participants' interests. Participants conduct research projects using selected qualitative critical methods and write critical research reports about specific examples of the type of persuasive cultural discourse selected. Prerequisite: CST 190; junior standing. Offered Occasionally.

CST 419 Cr.3

Communication, Media and Identity

This course critically examines the role of media in enabling, facilitating, or challenging the performances, social constructions and representations of gender, sexuality, race, and class in society. We will explore theories and topics relating to the relationship between media and identity in contexts that are both individual and social. The course focuses on 1) critical analyses of media representations of gender, race, sexuality, class, other primary facets of identity, and intersections therein; 2) audience interpretations of media representations; and 3) media resistance and advocacy. Focus will be placed on a range of mediated contexts through which identity is constructed and performed, including television, advertising, film, and web-based media. Prerequisite: CST 110, CST 190. Offered Annually.

CST 430 Cr.3

Advanced Topics in Interpersonal Communication

An in-depth exploration of interpersonal communication theories and applications in particular relational contexts such as family, friendships, intimate relationships, and work relationships. Theories and research methods used by noted interpersonal communication scholars will be discussed and critiqued. Topics covered may include attraction, relationship development and dissolution, relationship maintenance, dysfunctional relationships, intimacy, and friendship. Prerequisite: CST 190, CST 230; at least one of the following 300 level courses: CST 330, CST 332, CST 333, CST 334, CST 336, CST 338 or CST 339; junior standing. Offered Fall, Spring.

CST 450 Cr.1-6

Internship in Communication Studies

The internship in communication studies is an academically relevant work experience focusing on career development through professional contexts. CST students pursue internships in CST-related fields. The number of credit hours earned depends on the number of hours worked throughout the duration of the internship. Internship credit is earned during the period the work is completed. The student is responsible for: securing an internship, identifying and working with a CST faculty supervisor to create an internship proposal and determine a final project, and completing required CST internship paperwork in order to gain departmental approval prior to registration. See the CST Department website for additional information about the approval and registration process. Repeatable for credit - maximum six. Prerequisite: declared communication studies major; completion of 12 credits in communication studies, including CST 110, CST 190, and six other CST credits; junior standing. Consent of department. Pass/Fail grading. Offered Annually.

CST 452 Cr.3

Contemporary Approaches to Organizational Communication

This course is an investigation of contemporary theoretical approaches to understanding organizational communication. Particular attention is paid to how changes in our metaphorical understanding of organizations transform the nature of both communicating in organizations and the organizing process. The impact of new technologies on organizational communication is also considered. Students will learn how to use multiple perspectives to enhance their understanding of organizational communication. Prerequisite: CST 350. Offered Annually.

CST 460 Cr.3

Plan/Implementing/Evaluation Public Relations Campaign

This course examines the nature, role and processes of public relations. Research, planning, and evaluation will be used to implement a public relations campaign. Teams of students will plan and implement a complete public relations campaign for an organization or company. Prerequisite: CST 360. Offered Occasionally.

CST 471 Cr.3

Broadcast and Digital Media Management

A study of the operation and management functions of the broadcast media. Special emphasis on the problematic situations confronted by managers of the various departments within the broadcast industry. Prerequisite: CST 190. Offered Spring.

CST 481 Cr.3

Applied Leadership Experience

The applied leadership experience course is a capstone to the leadership development minor and designed to guide students through a leadership immersion experience. As such, students are required to be the designated leader of a group, lead an implementation of a product, process, policy or procedure, or have an important role on a change-oriented/social justice group or team. Students will reflect on their leadership experiences in terms of course content covered in the core and emphasis area classes of the leadership development minor. Students who are eligible for this course will complete an application and description of their leadership immersion experience for approval and permission to enroll. Prerequisite: CST 280, CST 380. Consent of instructor. Offered Annually.

CST 489 Cr.3

Advanced Topics in Media Studies

This course is an in-depth exploration of media studies theories and applications related to media industries, texts, and/or audiences. Methods applied and types of media studied will vary depending on instructor's expertise. Theories and research methods used by noted media studies scholars will be discussed and critiqued, and students will engage in their own research and/or practical applications guided by selected media studies theories and methods. Prerequisite: CST 190, CST 271; at least one of the following 300 or 400-level media studies emphasis area courses: CST 338, CST 377, CST 378, CST 419, CST 471; junior standing. Offered Occasionally.

CST 491 Cr.3

Special Topics in Communication Studies

Study in a selected area of communication studies. Varying topics will be offered at intervals, with a specific title assigned to each. For current content and credit assignment, consult the instructor or department chair. Course prerequisites vary by topics. Repeatable for credit - maximum nine. Offered Occasionally.

CST 498 Cr.3

Research Methods in Communication

Examines research methods for answering communication research questions in all communication studies emphases. Investigates qualitative, quantitative, and critical approaches, as well as underlying assumptions of all communication research. Prerequisite: grade of "C" or better in CST 301; admission to the communication studies major; junior standing. Offered Fall, Spring.

CST 499 Cr.3

Senior Project in Communication Studies

Students will conduct an individual investigation of a specific research question that results in a formal written research report. Some projects may involve a digital production or applied projects that also address an original question or problem and follow the research process. Required classroom attendance and regular consultation with their research adviser contribute to the success of the project, and final results are presented in a formal poster presentation. Prerequisite: grade of "C" or better in CST 498; senior standing; admission to the communication studies major. Offered Fall, Spring.

Community Health Education (CHE) - Courses

Courses

CHE 220 Cr.1

Medical Terminology for Health Education

Skill development for working with the special language used in clinics, hospitals, and other health agencies. Students in various health fields will learn to use medically related terms in their professional communication. Offered Fall, Spring.

CHE 360 Cr.3

Methods and Strategies for Health Education

The purpose of this course is to help participants develop skills and strategies in relation to facilitation, instruction, as well as the use of theoretical concepts to more effectively implement health education and health promotion programs. Course participants will gain an understanding of the various ways in which people learn and develop a variety of skills to create effective learning strategies. Participants will also comprehend the fundamentals of social marketing as well as health literacy and how these concepts should be used to create more effective health education and health promotion programs. Additionally, participants will learn how to use health behavior theories and models to create culturally appropriate health education materials. Prerequisite: admission to the public health and community health education major. Offered Fall, Spring.

CHE 370 Cr.3

Motivational Interviewing for Health Educators

This course introduces participants to principles, concepts, and spirit of Motivational Interviewing (MI), which is an evidenced-based method, grounded in theory meant to facilitate behavior change. Participants will learn the process of exploring and resolving the ambivalence that often creates barriers to change in various populations. Participants will also learn how to properly share information, give advice, and plan for action using the spirit and methods of MI. Additionally, participants will also gain an understanding of how to interpret and apply a behavioral screening or diagnostic questionnaire as they relate to the referral individuals for MI with various health concerns that need to be addressed. Prerequisite: admission to the public health and community health education major. Offered Fall, Spring.

CHE 380 Cr.3

Assessment and Program Planning in Health Education

Grounded in the responsibilities of a health education specialist, this course requires groups of students to assess community needs and resources as well as plan health education programs. Following models commonly used in public health, students collect primary data as well as utilize secondary data to perform a comprehensive assessment of a population of interest. Reliable and valid resources that explain the health status of a population from the perspective of theories and ethically conducted research are used when prioritizing needs and planning interventions. Students learn about the necessity of early alignment between assessment and health education program goals and objectives. Professional competencies related to evaluating capacity and prompting community involvement are emphasized as essential to planning best practices solutions to community health needs. Prerequisite: PH 335, PH 340; CHE 360, CHE 370; junior standing. Offered Fall, Spring.

CHE 400/500 Cr.3

Health Policy, Advocacy, and Community Organizations

This course focuses on the process of engaging communities in health education and behavior change programs of various kinds. Several organizing paradigms for fostering healthy communities are examined, and their practical and ethical implications are considered. Skill development for community assessment, constituency-building, and leadership of participatory planning efforts is emphasized. Students are paired with health and human services, health policy and social justice agencies, and coalitions to gain an in-depth knowledge of agenda setting, legislative research, and legislative advocacy in relation to specific legislation being proposed in the Wisconsin state legislature. Course will tie policy theory to real-world practice. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: PH 335; PH 340; CHE 360; CHE 370; junior standing. Offered Fall, Spring.

CHE 405 Cr.3

Physical Activity and Public Health

This course is designed for public health and community health educators who plan to work with individuals, clients, and/or patients in a variety of health, clinical, and community settings. Students will come away with an understanding of how to advance the use of physical activity for the prevention and treatment of chronic disease and other health issues. The course will explore how physical activity improves health, including cardiorespiratory and metabolic diseases, overweight and obesity, musculoskeletal disorders, cancers, and mental health. Data on the prevalence and economic costs of physical inactivity are presented to demonstrate the scope of the health issues and the importance of addressing them. Evidence-based strategies for increasing physical activity in individuals and communities using three approaches (informational, behavioral and social, and environmental and policy) will be explored. Strategies for implementing physical activity opportunities in communities will also be addressed. Prerequisite: junior standing. Offered Spring.

CHE 430/530 Cr.3

Grant Writing and Resource Management

The grant seeking enterprise is studied and applied to community and public health organizations, in areas of perceived community need. Content includes locating and communicating with funding agencies, writing and reviewing grant proposals, analyzing requests for proposals, using technology in grant seeking, and implementing and evaluating grant funded projects. Project planning and administrative competencies are incorporated. Budget planning and grant administration is identified and applied. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CHE 350 or CHE 380; CHE 400; junior standing. Offered Fall, Spring.

CHE 450 Cr.3

Implementation, Administration, and Evaluation of Health Education Programs

Students will implement, administer, and evaluate a community health education program. Interventions will be based on professional best practices and social and behavioral theories and models. Data will be collected that allow students to evaluate goals, objectives, and activities. Students will be required to generate a report at the end of the semester that can be used to inform decision makers on the success of the program and can be added to the professional evidence base. Prerequisite: CHE 380, CHE 400. Offered Fall, Spring.

CHE 475/575 Cr.1-3

Workshop in Health Education

Group study of varying health education topics, community agencies, and educational institutions. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit under different topics - maximum six credits. Departmental option for pass/fail or letter grade. Prerequisite: junior standing. Consent of instructor. Offered Occasionally.

CHE 480 Cr.3

Senior Capstone

This course is designed as a culminating course that will engage participants in applying the skills and concepts they have developed throughout the program curriculum. In particular, students will apply the profession's areas of responsibility as well as ethical standards in various activities, discussions, and projects. In addition, participants will 1) review selected community health topics in our Public Health and Community Health Education program, 2) be introduced to current issues in community health education, public health and population health, 3) be introduced to the employment, educational, and political dynamics in selected occupational settings, and 4) assess and discuss their specific pre-professional needs at this point in time. Prerequisite: CHE 350 or CHE 380; CHE 400. Offered Fall, Spring.

Computational Science (CMP) - Courses

Courses

CMP 390 Cr.3

Survey of Computational Science

This course will survey the computational and mathematical tools and techniques currently being applied to problems in the sciences. Specific problems drawn from biology, chemistry, meteorology and physics will be explored in detail. Computational tools such as Mathematica, Explorer and PVM will be introduced and used to solve problems. In addition to small projects, students will be required to complete a larger project selected from their major discipline. Prerequisite: CS 120, CS 220; MTH 207. Offered Occasionally.

CMP 490 Cr.2-3

Senior Computational Science Project

This course is a capstone course for students pursuing a computational science minor. The student is expected to pursue a project that integrates a problem(s) from their major scientific discipline together with computation. Such work should demonstrate the student's ability to apply the tools and techniques acquired from prerequisite study in science and computation. The work must be performed under the direction of a faculty member from the student's major department. The student is also expected to submit a paper and an oral presentation on the project results to the computational science committee. Prerequisite: CMP 390; consent of project supervisor and project approval by the computational science committee. Consent of department. Offered Occasionally.

Computational Thinking (CT) - Courses

Courses

+CT 100 Cr.3

Introduction to Computational Thinking

Computational thinking represents a universally applicable collection of concepts and techniques borrowed from computer scientists. This course is designed to teach how to think algorithmically; to examine the ways that the world's information is encoded and how this impacts our lives; to explore the capabilities and limitations of computers from the past, the present and the future; to apply software design diagrammatic techniques to model real-world systems; to learn how the rules of logic apply to computation, reasoning and discourse; to examine how computers both enhance and constrain our lives; to explore many of the problem solving strategies used by software developers and how they are useful to you. Offered Fall, Spring.

Computer Engineering (CPE) - Courses

Courses

CPE 105 Cr.1

Introduction to the Computing Environment

This course introduces students to the use of the UNIX/Linux environment for file and process management, programming workflow, and the automation of computing tasks. The ethical responsibilities of shared computing resources are emphasized. Offered Fall.

CPE 212 Cr.3

Digital Logic

This course is an introduction to the fundamentals of digital logic circuit analysis and design. Basic Boolean logic primitives are introduced and described in truth tables, schematics and Boolean expressions. Combinational logic circuits are minimized with DeMorgan's Law and Karnaugh Maps. Level-sensitive and edge-triggered sequential logic elements are used as building blocks for finite state machines. Circuits are simulated using a structural hardware description language. Prerequisite: CS 120; concurrent enrollment in CS 270. Offered Spring.

CPE 301 Cr.3

Introduction to Transient Analysis

This course introduces students to fundamentals of electrical circuit response over a period of time defined by the user and various analysis techniques for the response of first and second order electric circuits. The topics include time domain analysis of dynamic linear (first and second order) circuits, introduction to Laplace transformations, the use of Laplace transform in circuit analysis, and introduction to Fourier series analysis and its applications in circuits. Prerequisite: MTH 308; PHY 334. Offered Fall.

CPE 302 Cr.3

Introduction to Control Systems

This course introduces students to control systems, the study of the analysis and regulation of the output behavior of dynamic systems subject to input signals, including the modeling, analysis, and design of linear feedback control systems. The emphasis of this course is on the basic theories and feedback controller design methods of linear time-invariant systems. Prerequisite: MTH 308; PHY 334. Offered Occasionally.

CPE 309 Cr.3

Systems Development

This course is an introduction to systems programming and the UNIX/Linux user-space interface to the operating system. Low-level C programming constructs are discussed and used to write efficient and robust systems code. The various tools used in file inspection, systems development and maintaining a portable build environment are also examined. Prerequisite: CPE 105; CS 270. Offered Fall.

CPE 321 Cr.3

Introduction to Digital Signal Processing

This course is an introduction to the fundamentals of digital signals and systems. Various representations for discrete time signals will be introduced. Students will learn sampling theory, aliasing and reconstruction. The Discrete Fourier Transform will be used to determine the frequency content of signals. Linear time-invariance will be introduced and used as a basis for developing complex systems. Prerequisite: MTH 309; PHY 334. Offered Spring.

CPE 395 Cr.1-3

Independent Study

Individualized study of topics in Computer Engineering not covered by courses regularly taught in the department. Repeatable for credit - maximum six. Prerequisite: junior standing. Offered Fall, Spring, Summer.

CPE 406 Cr.3

Architecture of Parallel Systems

This course covers the fundamental architectural requirements of parallel computer systems. Students will study the programming models used in parallel code and the assumptions made by parallel programmers for various programming models. The course then explores the underlying architectural decisions that can be made and how they either support or violate the assumptions of these parallel programming models. Topics include cache coherence, cache consistency, and processor interconnect. Prerequisite: CS 441. Offered Occasionally.

CPE 419 Cr.1-3

Topics in Computer Engineering

A special topics course in computer engineering that will function as a forum for new ideas and testing ground for new courses. Repeatable for credit - maximum six. Prerequisite: junior standing. Offered Occasionally.

CPE 420 Cr.3

Digital Design

This course covers the design and implementation of large, complex digital systems. Students will describe designs with fully-synthesizable, behavioral Verilog. The efficiency of designs will be analyzed for bottlenecks that can be solved with architectural and/or implementation optimizations. Emphasis will be placed on the test of systems. Functional testing will include the use of simulation test benches with calls to high-level languages. Prerequisite: CPE 212; CS 370. Offered Occasionally.

CPE 446 Cr.3

ASIC Design

This is a course in digital ASIC design, including a deeper insight into the design of high-performance and power-efficient CMOS circuits. The parasitics inherent to MOSFETs are used as a basis for transistor sizing. Techniques for estimating wire loads are discussed. CMOS circuits will implement cells of arbitrary digital logic functions for both static and dynamic logic. Prerequisite: CPE 212; CS 370; PHY 335. Offered Occasionally.

CPE 463 Cr.3

Advanced Computer Architecture

In this course in modern computer architecture, students will study advanced techniques for extracting instruction-level parallelism from single-threaded programs. The in-order superscalar execution model will be introduced, and then extended to include the out-of-order execution model in two forms - Tomasulo's algorithm and the MIPS R10k architecture. Students will be introduced to branch prediction and prefetching as mechanisms for alleviating bottlenecks in all processor models. Prerequisite: CS 370. Offered Occasionally.

CPE 466 Cr.3

Code Generation and Optimization

This course studies the algorithms used by a modern optimizing compiler for generating efficient, high-performance program executables that still maintain correct program semantics. The course uses the compiler intermediate representation as a starting point for a variety of code transformations necessary for local and global optimizations, profile-guided optimizations, constructing large optimization regions, register allocation, and instruction scheduling. Prerequisite: CS 370. Offered Occasionally.

CPE 478 Cr.3

Virtual Machines

This course explores the design of virtual machines and their related systems. Students will study efficient emulation of user-level programs, both within the same instruction set as the host machine, as well as across instruction sets. System-level considerations will be introduced to expand the reach of possible virtualization strategies. Both hardware and software techniques for efficient virtualization will be employed. Prerequisite: CPE 309; CS 441. Offered Spring.

CPE 481 Cr.1

Professionalism in Engineering

This course surveys issues related to the professional responsibility in engineering careers. Guidance in ethical decision-making and where to find assistance in navigating ethical dilemma are discussed. The importance of professional societies and their codes of conduct are emphasized. Students will recognize the importance of, and strategies to engage in, life-long learning within their field. Prerequisite: junior standing. Offered Spring.

CPE 483 Cr.1

Engineering Project Management

This course is an introduction to the issues relevant to managing engineering projects. Topics include effective group organization, decision making, time and cost estimation, progress tracking, defect tracking, conflict resolution and leadership. Additional topics may include case studies in management strategies, tools for managing products and projects, and process improvement techniques. Prerequisite: STAT 245; junior standing. Offered Fall.

CPE 498 Cr.2

Senior Capstone

This course is a major computer engineering group project that requires a detailed analysis of the problem domain, organization into groups, effective management, detailed design, implementation and demonstration. The project will be guided by a department faculty member with interests in computer engineering. Submission of a written project report is required, followed by an oral examination by the Project Evaluation Committee in the department. Repeatable for credit - maximum four. Prerequisite: senior standing. Pass/Fail grading. Offered Fall, Spring.

CPE 499 Cr.1-3

Research in Computer Engineering

This course is an opportunity to become acquainted with literature in the computer engineering field and to work on a professional level research project within an area of interest of the computer engineering faculty. A seminar reviewing the results of the study will be a requirement for completion of the course. Repeatable for credit - maximum six. Prerequisite: junior standing. Consent of instructor. Offered Fall, Spring, Summer.

Computer Science (CS) - Courses

Courses

+CS 101 Cr.4

Introduction to Computing

Computers and computer software are an integral part of modern society. This course explores this relationship. Students will examine the computer as a problem-solving tool through the use of database, spreadsheets and small scale programming. Students will examine the computer as a communication tool through the use of word processing and the Internet. Other topics include the history and future of computer technology, computer hardware basics, man/machine relationships, applications of computers in various disciplines, and social/ethical issues. Credits earned in CS 101 cannot be applied to the CS major or minor. Offered Occasionally.

CS 103 Cr.1

Elementary Database Principles and Design

An introduction to the design and implementation of relational databases. Design concepts will include entity-relationship modeling, relational table structure, keys, foreign keys, referential integrity, and data quality. Implementation concepts will emphasize extracting information through queries, reports, and forms. Seven-week course. Prerequisite: course not open to those who have completed CS 101. Offered Occasionally.

CS 104 Cr.1

Elementary Spreadsheet Principles and Design

An introduction to the design and implementation of spreadsheets. Design principles will include cell content, use of functions and formulas, relative and absolute addressing, and formatting. Modern spreadsheet software will be used to implement the spreadsheets, with an emphasis on presenting numeric data in an organized manner. Seven-week course. Offered Occasionally.

+CS 115 Cr.3

Introduction to Python Programming

This course is an introduction to the fundamentals of software development using Python for students with no prior programming knowledge. Topics include variables, data structures, arithmetic and logical operators, selection control, repetition control, methods, parameter passing, basic data analysis, and rudimentary software engineering techniques. Topics on basic data analysis include relevant tools and Application Programming Interfaces (APIs) for working with and visualizing small to medium-sized data sets from files and online sources. Students complete numerous programming projects using the Python language. Prerequisite: not open to students with credit in CS 120. Offered Spring.

+CS 120 Cr.4

Software Design I

This course is an introduction to the fundamentals of software development including software classes, objects, inheritance, polymorphism, logic, selection control, repetition control, subprograms, parameter passage, and rudimentary software engineering techniques. Students complete numerous programming projects using a modern programming language. Prerequisite: MTH 151 or MTH 160 or MTH 175 or math placement test scores at or above MTH 151. Offered Fall, Spring.

CS 202 Cr.3

Introduction to Web Design

This course is an introduction to webpage design and website management. Students will be introduced to browser/server interaction, webpage design, techniques for creating media rich graphical interfaces, and ethical considerations regarding intellectual property rights and security. Students will receive hands-on experience in a variety of standardized web technologies to develop dynamic, functional, and appealing webpages. Prerequisite: CT 100 or CS 120 or familiarity with some programming language. Offered Fall.

CS 220 Cr.4

Software Design II

This is a second course in the design of programs. Emphasis is placed on data abstraction and its application in design. Definitions of abstract data types are examined. The following structures are examined as methods for implementing data abstractions: recursion, generics, stacks, queues, strings, and various linked lists. Students will be expected to write several programs using these techniques in a modern programming language. Prerequisite: CS 120; concurrent enrollment in CS 225 recommended. Offered Fall, Spring.

CS 224 Cr.1-3

Introduction to Programming Language

This course presents the syntax and semantics of a particular programming language. Different offerings of the course will present different languages. Students are expected to be fluent in another programming language prior to enrollment. Repeatable for credit - maximum six. (Each repeat must be for a different language.) Prerequisite: a prior computer science course appropriate to the language being offered. Offered Occasionally.

CS 225 Cr.3

Discrete Computational Structures

An introduction to mathematical reasoning and proof with an emphasis on its role in computation and software development. Course topics include mathematical logic, set theory, relations and functions, induction and recursion, equivalence relations, partial orders, lattices and other algebraic structures. Prerequisite: CS 120; MTH 151; concurrent enrollment in CS 220; declared computer science major or minor. Course not open to those who have completed MTH 225. Offered Fall, Spring.

CS 227 Cr.1

Competitive Programming

Programming competitions involve writing code to solve a set of problems, working under a time-limit. Learning to participate successfully in such competitions is an effective way to become a better programmer. This course introduces students to some of the techniques and problem types that are commonly encountered in many programming contests. Students will learn a set of common algorithms and data structures, along with general conceptual tools and rules of thumb, that will prepare them to be able to solve programming problems encountered in competition and job interview settings. The course will consist of code review, along with extensive coding practice. Even experienced programmers will have something to learn from the experience of solving new problems from scratch on a regular basis. Repeatable for credit - maximum three. Prerequisite: CS 220. Concurrent enrollment or completion of CS 340 recommended. Offered Fall, Spring.

CS 270 Cr.3

Introduction to Assembler Programming, C Programming and Computer Organization

This course involves programming in machine, assembler and C languages and an introduction to computer organization. Machine language, assembler language and computer organization topics include basic instruction types, data representation, addressing modes, registers, the ALU, computer memory, and interrupt handling. C languages topics include control structures, data types, arrays, structs, files, pointers, dynamic memory, compiling and linking. Prerequisite: CS 120; CS 225 or MTH 225. Offered Fall, Spring.

CS 272 Cr.3

Digital Circuit Design for Microcontrollers I

An introduction to digital circuit design in the context of embedded microcontroller devices. This will include flip-flops, sequential and combinational logic units (e.g. shift registers, half-adders, encoders * decoders, multiplexers), state machines, analog to digital and digital to analog conversion. Prerequisite: CS 225; MTH 207. Offered Annually.

CS 340 Cr.4

Software Design III: Abstract Data Types

This course is an extensive survey of data structures and associated algorithms. An introduction to algorithm efficiency measures is included as a tool for deciding among alternate algorithms. Topics include searching and sorting in arrays, hash tables, tree traversal and search algorithms, expression evaluation, functional programming, development of thread-safe data structures and graphs. Prerequisite: grade of "C" or better in CS 220; CS 225 or MTH 225. Offered Fall, Spring.

CS 341 Cr.3

Software Design IV: Software Engineering

A study of methodologies for the development of reliable software systems. Several specification, design, and testing techniques are surveyed with an emphasis on one particular formal specification and formal design technique. Students work in teams, applying these techniques to the development of a medium scale (2000-5000 lines) software product. Prerequisite: CS 340. Offered Fall, Spring.

CS 342 Cr.3

Software Testing Techniques

As the size and complexity of software projects have grown, so has the importance of ensuring program correctness. This course examines the issues of program testing, validation, and verification. Course projects require students to construct test data and to analyze the correctness of several software systems. Prerequisite: CS 340. Offered Spring - Odd Numbered Years.

CS 351 Cr.3

Simulation

This course explores how complex systems can be modeled and simulated using computer programs with an emphasis on models that are discrete, dynamic, and stochastic. Students will formulate models using both event-oriented and process-oriented modeling paradigms, implement the models in code, run computational experiments to gather output, and analyze and interpret the results. Topics include Monte Carlo simulation, discrete-event simulation, probability and random variables, pseudorandom number generation, and output analysis. Prerequisite: CS 220; MTH 207. Offered Occasionally.

CS 353 Cr.3

Analysis of Algorithm Complexity

An in-depth analysis of the computational complexity of a wide range of algorithms for problems of fundamental importance to computer science. Algorithms to be examined include: sorting, pattern matching and various graph algorithms. Prerequisite: CS 340; MTH 207. Offered Fall - Even Numbered Years.

CS 356 Cr.3

Software Exploitation

This course examines techniques for exploiting vulnerable software. Topics include binary reverse engineering, source code analysis, intrusion, and exploitation. The course will also discuss matters of reconnaissance, privilege escalation, lateral movement, obfuscation, and exfiltration. Students are expected to write low-level exploits using modern tools and deploy them against vulnerable services in a laboratory environment. Prerequisite: CS 270, CS 340. Offered Annually.

CS 364 Cr.3

Introduction to Database Management Systems

Introduction to the design and organization of database management systems. Topics include the relational data model, relational algebra, SQL query language, database software development, data security, normalization, client/server environments. Prerequisite: CS 220. Offered Fall, Spring.

CS 370 Cr.3

Computer Architecture

A presentation of the logical organization of modern digital computers. Topics include performance evaluation, instruction set design, computer arithmetic, processor control, pipelining, cache memory, memory hierarchy, memory and system buses, and I/O organization. Prerequisite: CS 270. Offered Fall, Spring.

CS 372 Cr.3

Hardware/Software Integration

This is a course in hardware and software interfacing for microcontrollers. This course includes inter-component communication using I2C, SPI and UART. Practical issues are discussed including signal integrity, debounce, level-shifting, and clock and power distribution. Lect. 2, Lab 2. Prerequisite: CS 272; or CPE 212, PHY 334, and PHY 335. Offered Annually.

CS 395 Cr.1-3

Independent Study

Individualized study of topics in computer science not covered by courses regularly taught in the department. Repeatable for credit - maximum six. Consent of department. Offered Fall, Spring, Summer.

CS 402/502 Cr.3

Web Application Development

This course will give a detailed description of the core concepts and general principles of web application development. The course will cover various protocols, programming languages, scripting languages, data storage and security, layered software architectures, and graphical interface design as they relate to web development. Students will apply these techniques to the development of medium scale web application. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 202; CS 340; junior standing. Offered Spring.

CS 410/510 Cr.3

Free and Open Source Software Development

This course examines all aspects of the Free and Open Source Software movement. The course surveys the various definitions of open source licenses and examples of major free and open source development projects (e.g. the GNU Project, Apache Foundation, Linux). The course also examines the development tools that support developer communities as well as how web-based applications have created the possibility of international development teams. Students will select and contribute to the software development of an existing open source project. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; junior standing. Offered Spring - Odd Numbered Years.

CS 418/518 Cr.3

Mobile Application Development

An introduction to the concepts and techniques of application development for mobile devices. The course will examine the design constraints of mobile devices, how mobile applications can leverage external data resources, integration of sensor data and the development environments of the chosen platform (e.g. iOS, Android and others). This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit with different topic - maximum six. Prerequisite: CS 340; junior standing. Offered Occasionally.

CS 419/519 Cr.1-3

Topics in Computer Science

A special topics course in computer science which will function as a forum for new ideas and testing ground for new courses. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit - maximum six. Prerequisite: junior standing. Consent of instructor. Offered Occasionally.

CS 421/521 Cr.3

Programming Language Concepts

A comparative study of the concepts underlying the design of contemporary high-level programming languages, including imperative, functional, logic and object-oriented paradigms; formal representation of syntax and semantics; control structures; data and procedural abstraction; scope and extent; parallelism and exception handling. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; CS 225 or MTH 225; junior standing. Offered Fall, Spring.

CS 431/531 Cr.3

Introduction to Robotics

This course is a hands-on introduction to the algorithms and techniques required to write robot control software. Topics include the components of mobile robots and robot manipulators, manipulator kinematics, robot task planning, sensing, sensor fusion, visual servoing and robot control concepts. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; junior standing. Offered Spring - Odd Numbered Years.

CS 441/541 Cr.3

Operating System Concepts

The study of the structures and algorithms of operating systems. Operating systems are viewed as managers and controllers of resources such as processors, memory, input and output devices and data. Topics include multiprogramming systems, CPU scheduling, memory management and device management. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; CS 370; junior standing. Offered Fall, Spring.

CS 442/542 Cr.3

Structures of Compilers

An extensive study of all phases of the compilation of high level programming languages. Topics include: scanning, parsing (LL and LR), semantics analysis, symbol table organization and manipulation, internal code generation, storage allocation, optimization and object code generation. Students are required to complete a compiler for a small high-level language. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 270; CS 340; junior standing. Offered Fall, Spring.

CS 443/543 Cr.3

Topics in Operating Systems

An intermediate course in operating systems extending topics introduced in CS 441. Operating systems concepts are studied in-depth. Typically students will study and modify an existing system. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 441; junior standing. Offered Occasionally.

CS 449/549 Cr.3

Advances in Software Engineering

Introduces advanced topics in software engineering. Topics include prototyping models, risk analysis, component-oriented software development, software architectures, software reuse, software metrics and quality analysis. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 341; junior standing. Offered Fall - Even Numbered Years.

CS 451/551 Cr.3

User Interface Design

This course focuses on the design and implementation of user interfaces. The topics include characteristics of user interfaces, user profiles, user interface design principles, methods and tools for user interface development, evolution of user interfaces, evaluation of user interfaces, and case studies. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; junior standing. Offered Fall - Odd Numbered Years.

CS 452/552 Cr.3

Artificial Intelligence

This course is an introduction to the fundamental principles of artificial intelligence. Topics include search strategies, adversarial search, constraint satisfaction, planning and scheduling, logic and inference, accounting for uncertainty, and probabilistic reasoning. Projects include writing a substantial artificial intelligence application program. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; junior standing. Offered Fall - Odd Numbered Years.

CS 453/553 Cr.3

Introduction to Theory of Computation

An introduction to the theoretical aspects of computation. The capabilities and limits of several computation models are considered including: partial recursive functions, Turing machines, finite state automata and formal languages. The implications of Church's thesis and unsolvable problems such as the halting problem are discussed. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; junior standing. Offered Spring - Even Numbered Years.

CS 454/554 Cr.3

Digital Image Processing

This course introduces the fundamentals of digital image processing techniques with an emphasis on the design and implementation of image processing algorithms. Topics include color models, point-processing techniques, convolution, Fourier domain processing, the discrete cosine transform, image compression methodologies, image restoration and enhancement, sampling and image display. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; junior standing. Offered Fall - Even Numbered Years.

CS 455/555 Cr.3

Fundamentals of Information Security

This course presents the fundamental concepts of information security. Basic policies, techniques and tools for maintaining the security of host computers, information networks and computer software are presented. Topics include encryption, authentication, access control, types of attacks and mitigations, software security, network security protocols, and the concepts of trust, privacy and ethics. Students are expected to compare security policies and techniques, apply concepts using modern tools and techniques, and explore recent security events. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 270, CS 340; junior standing. Offered Spring.

CS 456/556 Cr.3

Secure Software Development

Traditionally, software engineering has viewed flaws as the inconsistency of software behavior with its functional requirements. Software security problems, however, can occur in software that contains no such flaws but is nonetheless susceptible to external attack. This course examines known reasons for software security vulnerabilities with an emphasis on best practices for their detection and mitigation, along with general principles for engineering software in ways that enhance security. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 356; junior standing. Offered Occasionally.

CS 457/557 Cr.3

Machine Learning

This course is an investigation of programs that can dynamically adapt their behavior. The course focuses on two main ideas: data classification and deciding about actions. In both cases, a learning algorithm is one that improves performance, either by generating a more accurate classifier, or by finding a choice of action that leads to better outcomes. Students will learn various computational and mathematical models and techniques that can be applied to such problems. Topics include regression algorithms, decision trees, Markov processes, neural networks, reinforcement learning algorithms, and deep learning techniques. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; junior standing. Offered Fall - Even Numbered Years.

CS 461/561 Cr.3

Introduction to Data Science

This course examines key components of the data science lifecycle, including data collection and cleaning, exploratory data analysis and visualization, and extracting insight via statistical models and machine learning algorithms for regression, classification, and clustering. Algorithmic efficiency and scalability will be emphasized, and techniques for working with big data will be introduced. Students will use a modern programming language (e.g., R, Python) with appropriate packages suitable for data analysis. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; STAT 245 or CS 351; junior standing. Offered Alternate Years.

CS 464/564 Cr.3

Advanced Database Management Systems

Advanced topics in database management systems. Topics include the relational data model, relational calculus, embedded SQL programming, database application programming, indexing, system software and storage structures for databases, concurrency control, crash recovery, database administration, parallel and distributed databases, object-oriented databases. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 364; junior standing. Offered Spring - Odd Numbered Years.

CS 470/570 Cr.3

Parallel and Distributed Computing

A study of architectures, control software, and applications for parallel and distributed systems. A survey of parallel and distributed architectures including data flow machines, vector processors, shared memory multiprocessors, and message based multiprocessors. Software topics include process communication and synchronization, global state maintenance, negotiation, scheduling, data parallelism, control parallelism, and languages for parallel and distributed computing. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 370; junior standing. Offered Occasionally.

CS 471/571 Cr.3

Computer Networks

This course is an introduction to data communications, including the electrical properties and software protocols. In addition to presentations of the concepts and techniques used for data communications, several currently used standards and communications networks will be examined. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 270; CS 340; junior standing. Offered Spring - Even Numbered Years.

CS 472/572 Cr.3

Internet of Things

This course explores the possibilities which are created when everyday things become connected to the internet and how this can create new ways for humans to interact with computation and for computation to enable human activities. This course involves building small, sensor equipped hardware devices and cloud based software systems using various technologies. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340, CS 372; junior standing. Offered Annually.

CS 475/575 Cr.3

Computer Graphics and Modeling

An introduction to computer graphics in modern computing environments. Topics include geometric transformations, fundamental drawing algorithms, scalable vector graphics (SVG), OpenGL, WebGL, surface shaders, scene graphics, photorealistic rendering, surface mesh data structures, animation and modeling and GPGPU computing. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; MTH 207; junior standing. Offered Fall - Odd Numbered Years.

CS 476/576 Cr.3

Data Visualization

An introduction to visualizing various forms of data (abstract and concrete) using computer graphics. The course will consider both scientific visualization where the data itself determines the spatial representation and information visualization where appropriate spatial representations are imposed on the data. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: CS 340; MTH 207; junior standing. Offered Spring - Even Numbered Years.

CS 499 Cr.1-3

Research in Computer Science

An opportunity to become acquainted with literature in the field and to work on a professional level research project within an area of interest of the computer science faculty. A seminar reviewing the results of the study will be a requirement for completion of the course. Repeatable for credit - maximum six. Consent of instructor. Offered Fall, Spring.

Cooperative Education and Internship (CEI) - Courses

Courses

CEI 450 Cr.1-15

Cooperative Education/Internship

An academically relevant field experience in government, industry, business, or community agencies. Students must have their internships approved and be advised by the department most relevant to the field assignment. Determination of relevancy shall be made by the Career Services Office with the advice and consent of the department involved. The experience will be supervised closely by the intern's on-site supervisor, by the Career Services Staff, and by the student's faculty internship adviser. Students must be on their internship worksite during the academic term for which they are registered for academic credit. Credits earned usually will count only toward university electives and not toward the completion of any major or minor. Prerequisite: junior standing; minimum 2.25 cumulative GPA. Consent of instructor. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

CEI 475 Cr.3-15

University-wide Cooperative Education Internship

A sequel to CEI 450 for the student who has previously served an internship under CEI 450 and utilized all available credit therein (i.e., 15). This course is only for approved students seeking an academically relevant field experience in government, industry, business, or community agencies. The internship assignment must be approved and the grade assigned by the department in which the student is majoring. The experience will be supervised closely by the intern's on-site supervisor, by the Career Services Staff, and by the student's faculty internship adviser. Students must be on their internship worksite during the academic term for which they are registered for academic credit. Credits earned in this course do not count toward the completion of the major or toward the completion of a degree. These credits will not be averaged into the student's grade point average. Consent of instructor. Pass/Fail grading. Offered Occasionally.

Curriculum and Instruction (CI) - Courses

Courses

CI 461 Cr.3

Leadership for Elementary/Middle Science Education

This course is designed to augment teacher candidates' basic understanding of science curriculum planning, teaching practices, student thinking, and assessment procedures for elementary and middle level classrooms. Special emphasis will be given to demonstrating leadership by participating in a professional learning community, integrated science learning, differentiation, funding an inquiry science program, and special programs to enhance and extend classroom science experiences for students. Prerequisite: EDS 402 or concurrent enrollment. Offered Fall.

CI/EFN 499 Cr.1-6

Individual Study

Reading and research in an area of student interest in education under the direction of an education instructor. Open to elementary and secondary education students with excellent records. Not open to students concurrently enrolled in EFN 499. Prerequisite: junior standing. (Cross-listed with CI/EFN; may earn six credits total in CI and EFN 499.) Consent of instructor. Offered Fall, Winter, Spring, Summer.

Diagnostic Medical Sonography (DMS) - Courses

Courses

DMS 301 Cr.3

Introduction to Diagnostic Medical Ultrasound

In this course students will prepare for the new and challenging demands of sonography training in a hospital. Clinical policies and procedures are emphasized. Course content includes materials emphasizing personal adaptation skills and staff development issues, nursing procedures, ethics, and skills to become a better student. An overview of basic sonographic terminology, technique, and equipment form the framework for future study. Students will have the opportunity to demonstrate their knowledge of sterile technique. Lect. 2, Lab 2. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 302 Cr.3

Vascular Sonography I

Hemodynamics of the arterial and venous vasculature will be discussed. Lower extremity venous normal and abnormal will be discussed. Extracranial and intracranial cerebrovascular anatomy, normal and abnormal will be discussed. Students will become familiar with the clinical symptoms and specific ultrasound protocols for normal and abnormal cases associated with lower extremity venous and cerebrovascular disease. Lect. 2, Lab 2. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 303 Cr.3

Vascular Sonography II

Peripheral vascular direct and indirect, lower extremity arterial, upper extremity arterial, and upper extremity venous examinations, normal and abnormal will be discussed. Students will become familiar with the clinical symptoms and specific ultrasound protocols for normal and abnormal cases associated with peripheral vascular disease. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 304 Cr.3

Sonographic Principles and Instrumentation

This course enables students to become familiar with the physical principles governing the use of medical ultrasound equipment. Emphasis will be on diagnostic imaging systems, but students will also become acquainted with therapeutic devices including shock wave and thermal delivery systems. Basic principles of acoustic transmission and reflection in tissues are covered at an elementary level. Design and performance of transducers, pulse-echo imaging equipment, Doppler and color flow equipment, and physical therapy systems are emphasized. The physics leading to image artifacts is described, as are methods for evaluating performance of ultrasound devices. Finally, acoustical exposure measurements and levels from diagnostic equipment are discussed, as well as biological effects and risk. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 310 Cr.3

General/Vascular Clinical Education I

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for this Practicum I include abdominal imaging, OB/GYN imaging, and vascular technology. During this practicum, students will be assigned competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 311 Cr.3

General/Vascular Clinical Education II

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum II include abdominal imaging, OB/GYN imaging and vascular technology. During this practicum, students will be assigned competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 312 Cr.3

General/Vascular Clinical Education III

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum III include abdominal imaging, OB/GYN imaging and vascular technology. During this practicum, students will be assigned clinical competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Summer.

DMS 313 Cr.3

Echocardiography/Vascular Clinical Education I

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum I includes adult echocardiography and vascular technology. During this practicum, students will be assigned clinical competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 314 Cr.3

Echocardiography/Vascular Clinical Education II

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum II includes adult echocardiography and vascular technology. During this practicum, students will be assigned competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 315 Cr.3

Echocardiography/Vascular Clinical Education III

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum III includes adult echocardiography, pediatric echocardiography, and vascular technology. During this practicum, students will be assigned clinical competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Summer.

DMS 316 Cr.3

Cardiovascular Physiology in Sonography

This course will discuss cardiac physiology, mechanical events, timing of mitral and aortic flow, auscultation, phonocardiography, hemodynamics and Doppler applications to echocardiography, Doppler methods and formulas, concepts of dP/dt, index of myocardial performance, and evaluation of LV systolic and diastolic filling. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 317 Cr.3

Cardiovascular Principles in Sonographic Imaging

This course will discuss cardiovascular anatomy, ultrasound image orientation, scan planes, routine views, sonographic anatomy, the normal ultrasound exam protocol for the echocardiogram, left ventricle function indicators, hemodynamics and Doppler applications to echocardiography, spectral Doppler measurements, indirect measurements, Doppler methods, right heart pressures, and introductory echocardiography findings in the following disease states: aortic stenosis, aortic regurgitation, mitral stenosis, and mitral regurgitation assessment. Lect. 2, Lab 2. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 318 Cr.3

Embryology of the Heart in Echocardiography

This course is a study of the development of the cardiovascular system and the pediatric heart to include normal anatomy and congenital heart disease. This course will cover embryology of the heart, the pediatric echocardiography exam and protocols, and congenital heart disease. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 319 Cr.3

Adult Echocardiography I

This course will discuss cardiac anatomy and physiology, prosthetic valves, diastology, and cardiac valvular pathology seen on echocardiograms in the adult population. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 320 Cr.3

Pediatric Echocardiography I

This course will introduce the student echocardiographer to various types of congenital heart disease. The types of congenital heart disease to be discussed in this course include, but are not limited to, patent ductus arteriosus (PDA), atrial septal defect (ASD), ventricular septal defect (VSD), pulmonic stenosis (PS), coarctation of the aorta, transposition of the great arteries (TGA), double outlet right ventricle (DORV), and double outlet left ventricle (DOLV). Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Summer.

DMS 321 Cr.3

Adult Echocardiography II

This course will discuss cardiac pathology seen on echocardiograms in the adult population including cardiomyopathies (hypertrophic, dilated, restrictive), pericardial disease, endocarditis, and cardiac masses. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Summer.

DMS 326 Cr.3

Abdominal Sonography I

Anatomy, physiology, pathology, and pathophysiology seen on normal and abnormal sonograms of the chest cavity, peritoneal and retroperitoneal spaces, aorta and mesenteric vessels, and the liver will be discussed. Students will become familiar with the clinical symptoms, lab values, and specific ultrasound protocols for normal and abnormal cases. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 327 Cr.3

Abdominal Sonography II

Anatomy, physiology, pathology, and pathophysiology seen on normal and abnormal sonograms of the kidneys, biliary system, pancreas, spleen, and interventional procedures will be discussed. Students will become familiar with the clinical symptoms, lab values, and specific ultrasound protocols for normal and abnormal cases. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 330 Cr.3

OB/GYN Sonography I

This course focuses on the normal gross, relational, and sonographic anatomy of the female pelvis. Gynecologic pathologies and infertility are discussed. Physiology and related laboratory and clinical findings for disease processes are emphasized as related to the female pelvis. Lect. 2, Lab 2. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 331 Cr.3

OB/GYN Sonography II

The student will gain an understanding of embryology, sonographic evaluation, and complications during the first trimester. Labor, fetal presentation, and fetal anomalies as visualized on ultrasound during the second and third trimester will also be discussed. Students will become familiar with central nervous system anomalies, GI anomalies, GU anomalies, musculoskeletal anomalies, anomalies associated with multiple gestations, and placental pathology as they appear on ultrasound exams. Students will have the opportunity to practice biometric measurements on an obstetrical phantom during this course. Lect. 2, Lab 2. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 332 Cr.3

OB/GYN Sonography III

This course will discuss the role of ultrasound in evaluating maternal complications in pregnancy, needle guidance procedures (CVS sampling, Amniocentesis, PUBS, therapy), and in monitoring high risk patients. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Summer.

DMS 401 Cr.3

Vascular Sonography III

A review of hemodynamics, abdominal, penile, organ transplant Doppler, and vascular statistics will be discussed. Students will become familiar with the clinical symptoms and specific ultrasound protocols for normal and abnormal cases associated with vascular disease involving the above areas of interest. Lect. 2, Lab 2. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 402 Cr.3

Seminar in Professional Development

This course will familiarize the diagnostic medical sonography student with the history of the profession and professional societies associated with the field of diagnostic medical sonography. Students will learn how to be a professional and how to positively influence the field of diagnostic medical sonography. Students will also become familiar with resume creation and interviewing techniques. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 403 Cr.3

Seminar in Management, Research, and Education

This course will familiarize the diagnostic medical sonography student with educational and management issues in the profession. Students will problem solve management issues as they relate to diagnostic medical sonography and will explore educational strategies employed in ultrasound education. Students will participate in department quality assurance projects and educational course development projects. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 404 Cr.3

Seminar in Advanced Medical Imaging: Vascular

The student will be exposed to normal anatomy and pathology cases combining diagnostic medical sonography, computed sonography, and magnetic resonance imaging. The student will gain an understanding of how a diagnosis is made and patients are managed based on findings from multiple imaging modalities. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 410 Cr.3

General/Vascular Clinical Education IV

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum IV include abdominal imaging, OB/GYN imaging, and vascular technology. During this practicum, students will be assigned clinical competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 411 Cr.3

General/Vascular Clinical Education V

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum V include abdominal imaging, OB/GYN imaging, and vascular technology. During this practicum, students will be assigned clinical competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 412 Cr.3

General/Vascular Clinical Education VI

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum VI include abdominal imaging, OB/GYN imaging, and vascular technology. During this practicum, students will be assigned clinical competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Summer.

DMS 413 Cr.3

Echocardiography/Vascular Clinical Education IV

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum IV includes adult echocardiography, pediatric echocardiography, and vascular technology. During this practicum, students will be assigned clinical competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 414 Cr.3

Echocardiography/Vascular Clinical Education V

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum V includes adult echocardiography, pediatric echocardiography, and vascular technology. During this practicum, students will be assigned clinical competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Spring.

DMS 415 Cr.3

Echocardiography/Vascular Clinical Education VI

Students are scheduled for clinical practicum at participating clinical education centers. Clinical experience rotations for Practicum VI includes adult echocardiography, pediatric echocardiography, and vascular technology. During this practicum, students will be assigned clinical competencies and objectives to complete. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Summer.

DMS 420 Cr.3

Specialized Sonography

In this course the student studies the embryology, structure, physiology, and pathology of the breast, thyroid, and scrotum. Normal, abnormal gross, cross-sectional, and relational sonographic anatomy will be explored. Invasive and intraoperative sonographic techniques will be discussed as they relate to breast, thyroid, and scrotal sonography exams. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Summer.

DMS 421 Cr.3

Seminar in OB/GYN: Introduction to Fetal Echocardiography

This course will discuss the role of ultrasound in evaluating the fetus for various genetic syndromes and understanding inheritance patterns. Advanced study of the fetal heart, to include normal anatomy and congenital heart disease, will be discussed including embryology of the heart, the fetal echocardiography exam and protocols, and congenital heart disease. This course also gives students a board review to assist in preparing to take the ARDMS OB/GYN specialty examination. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 422 Cr.3

Introduction to Neurosonography

This course will cover the anatomy, physiology, pathology, pathophysiology, and the sonographic appearance of the normal and abnormal neonatal brain and spine. Students will become familiar with the normal ultrasound exam protocol and how to modify the exam for pathological conditions. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 423 Cr.3

Introduction to Musculoskeletal Sonography

This course will introduce students to an array of musculoskeletal sonographic evaluations including anatomy, physiology, and sonography protocols and procedures. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Summer.

DMS 428 Cr.3

Abdominal Sonography III

Anatomy, physiology, pathology, and pathophysiology seen on normal and abnormal sonograms of the adrenals, male pelvis, and pediatric specialty exams will be discussed. Students will become familiar with the clinical symptoms, lab values, and specific ultrasound protocols for normal and abnormal cases. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 430 Cr.3

Stress Echocardiography

In this course the student will prepare for the new and challenging demands of sonography training in a hospital with emphasis on stress echocardiography. Clinical policies and procedures are emphasized. Course content includes materials emphasizing personal adaptation skills and staff development issues, nursing procedures, ethics, and skills to become a better student. An emphasis is put on coronary anatomy and wall segment distribution. An overview of basic sonographic terminology, technique, and equipment form the framework for future study. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 431 Cr.3

Pediatric Echocardiography II

This course will introduce the student echocardiographer to various types of congenital heart disease. The types of congenital heart disease to be discussed in this course include, but are not limited to, univentricular heart, right ventricular hypoplasia, left ventricular hypoplasia, inflow anomalies, outflow anomalies, total anomalous pulmonary venous return and coronary artery anomalies, conotruncal anomalies, abnormalities within the cardiac chambers, proximal vessels and thorax, cardiomyopathies, postoperative evaluations, and complex combinations of previously discussed congenital heart defects. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 432 Cr.3

Adult Echocardiography III

This course will discuss cardiac anatomy and pathology as it is seen on echocardiography. This course will focus on intraoperative cardiac ultrasound, congenital heart disease in the adult, and guidance for invasive procedures and contrast echocardiography. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Fall.

DMS 433 Cr.3

Special Procedures in Echocardiography

This course will cover topics for senior students moving from being a student to an entry level sonographer. The course will include the fundamental concepts for intravenous catheter insertion, aseptic technique, and IV contrast administration. A demonstration and lecture on strain imaging and the use of 3D/4D will be presented. There will be a research component for the Intersocietal Accreditation Commission in Echocardiography. Prerequisite: admission to Diagnostic Medical Sonography Program. Offered Summer.

Early Childhood Education (ECE) - Courses

Courses

ECE 212 Cr.3

Child Growth and Development for Early Childhood-Middle Childhood Educators

A study of the development of children from birth through age thirteen (early adolescence) with a focus on birth through age eleven. Cognitive, social-emotional, physical and language development are emphasized. Factors that enhance or inhibit development (including diverse family structures, cultural variance, and linguistic diversity) are also studied. ECE 212 is required for admission into the Early Childhood-Elementary Education Program. Prerequisite: EDS 203 or EDS 206; declared education (EC-MC) major; 12 earned credits. Offered Fall, Spring.

ECE 213 Cr.3

Introduction to Early Childhood Education

An introduction to the early childhood education profession and programs that provide care and education for young children (birth through age eight) and their families. The course will examine historical and theoretical influences on early childhood programs, the roles and responsibilities of early childhood professionals, and the effects of early childhood education on children's development and learning. An overview of developmentally appropriate practice will focus on the teacher as decision maker, multiple sources of knowledge that inform practice, designing positive learning environments, and collaborative relationships with families and colleagues. Course includes a field experience with young children in early childhood programs. Prerequisite: EDS 203 or EDS 206; ECE 212 or concurrent enrollment. Offered Fall, Winter, Spring, Summer.

ECE 214 Cr.3

Child Growth and Development for ECE: Birth-Age 3

This course is the study of the development of children from birth through age three. Cognitive, social-emotional, physical and language development are emphasized. Factors that enhance or inhibit development (including diverse family structures, cultural variance, and linguistic diversity) are also studied. Systems of responsive care and education for infants and toddlers will be examined including Developmentally Appropriate Practice. Prerequisite: EDS 203; EDS 206 or concurrent enrollment; declared early childhood education major. Offered Fall, Spring.

ECE 215 Cr.3

Child Growth and Development for ECE: Ages 4-8 (PK-Grade 3)

This course is the study of the development of children from ages 4-8 (PK-grade 3). Cognitive, social-emotional, physical and language development are emphasized. Factors that enhance or inhibit development (including diverse family structures, cultural variance, and linguistic diversity) are also studied. Systems of responsive care and education for ages 4 through age 8 will be examined including Developmentally Appropriate Practice. Prerequisite: EDS 203; EDS 206 or concurrent enrollment; declared early childhood education major. Offered Fall, Spring.

ECE 316 Cr.3

Early Childhood Administration, Advocacy, and Leadership

This course emphasizes the study of the administration and organization of early childhood programs including program and staff development, supervision and evaluation of program and staff, financial management of a program, accreditation and licensing regulations, governmental and community agencies. The study of advocacy within the ECE profession is also addressed with emphasis on ethical standards, collaboration with colleagues, and emerging leadership within school and communities. Special attention is given to issues of equity and social justice within ECE through advocacy. Prerequisite: ECE 212 and ECE 213, or ECE 214 and ECE 215; EDS 318 or concurrent enrollment. Offered Fall, Spring.

ECE 324 Cr.3

Early Childhood Education: Curriculum and Assessment for Infant/Toddler through Preschool

An overview of preschool programs serving children from birth through five years of age, including the study of developmentally appropriate practices and integrated curriculum development. The course will also focus on adapting instructional materials and planning appropriate experiences for young children with disabilities. The affective nature of young learners will be examined and used as a foundation for anti-bias curriculum. Instructional activities will be planned and implemented with infant through preschool children. Prerequisite: ECE 212; ECE 213. Offered Fall, Spring.

ECE 326 Cr.2

Early Childhood Education: Curriculum and Assessment for Kindergarten

A study of curriculum content, instructional strategies and materials in kindergarten programs. The focus is on developmentally appropriate curriculum which integrates social studies, science, literacy, mathematics and the arts. Issues in kindergarten education will be examined. Seven-week course. Prerequisite: ECE 212, ECE 213; to be taken concurrently with ECE 327, ECE 425, and ECE 490; admission to teacher education. Consent of department. Offered Fall, Spring.

ECE 327 Cr.1

Field Experience: Kindergarten

A field experience involving observation, participation, and instruction in kindergarten settings. Students become acquainted with curriculum content, instructional strategies and classroom management techniques currently used in kindergarten classrooms. Teacher candidates will participate in a multi-day, consistent schedule in their field placement setting, established by the course instructor in consultation with the teacher candidate and cooperating teacher. Seven-week course. Prerequisite: ECE 212, ECE 213; to be taken concurrently with ECE 326, ECE 425, and ECE 490; admission to EC-MC teacher education. Consent of instructor. Pass/Fail grading. Offered Fall, Spring.

ECE 330 Cr.3

Social and Emotional Foundations of Learning

This course will address the foundations of learning in early childhood through social and emotional foundations. The course will address curriculum planning and assessment from a social and emotional perspective. Environmental influences on child mental health, including toxic stress and poverty, will be explored, as will the role of the teacher in responding to child trauma. Guidance strategies founded on the democratic classroom and Pyramid Model will be examined and applied. Anti-bias, social justice, and equity education in the birth-grade 3 setting will be addressed. Prerequisite: ECE 214, ECE 215; EDS 318 or concurrent enrollment. Offered Fall, Spring.

ECE 335 Cr.3

Learning with Nature

Early childhood students' social, emotional, physical, and cognitive development is positively influenced when learning opportunities in nature are provided. This course will prepare early childhood teachers with the knowledge, skills, and dispositions for using the natural environment as a classroom to develop children's environmental literacy. Within this course, early childhood teachers will learn about the benefits of nature-based learning, prepare for how to keep children safe in the outdoor learning environment, design a nature-based space that is safe and enhances learning and development, and plan and implement authentic, interdisciplinary nature-based explorations that are developmentally and culturally appropriate, inclusive, and emphasize play. This is an integrated lecture/lab course where students will learn life/earth science content and pedagogical methods in outdoor settings as weather allows, as well as attend field trips. Prerequisite: ECE 214, ECE 215. Offered Fall, Spring.

ECE 413 Cr.3

Teaching Social Studies: Early Childhood/Elementary Education

This course provides teacher candidates with an introduction to the issues and best practices in social studies education in pre-K, kindergarten, and elementary level classrooms, promoting the development of inquiry, cultural awareness, multiple perspectives, active learning, and critical thinking. Teacher candidates will explore curriculum, techniques, and materials, which promote powerful and meaningful social studies. Prerequisite: EDS 311, EDS 318; taken concurrently with ECE 418; admission to teacher education. Consent of department. Offered Fall, Spring.

ECE 415 Cr.3

Field Experience I in Early Childhood Education: Grades K-3

This course is the first field experience in a school environment. Teacher candidates will be introduced to best practices around diversity and inclusive classrooms, professionalism, classroom management, and social justice. Teacher candidates will develop and teach lessons as well as build and maintain the classroom environment. This class includes a one-hour/once-a-week seminar and a multi-day field experience. The field experience placement and attendance schedule will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: ECE 335, ECE 413, ECE 418; taken concurrently with ECE 421 and ECE 422; admission to teacher education. Consent of department. Offered Fall, Spring.

ECE 418 Cr.3

Literacy Methods II: Early Childhood/Elementary Education

The course will focus on teaching reading and literacy strategies and techniques in pre-K through grade 3 classrooms. It will cover pedagogy and application of best practices in literacy instruction. Prerequisite: EDS 318; taken concurrently with ECE 413; admission to teacher education. Consent of department. Offered Fall, Spring.

ECE 421 Cr.3

Science Methods: Early Childhood/Elementary Education

This course is designed to introduce early childhood/elementary teacher candidates to current methods and practices for teaching science in elementary classrooms. Methods investigate the nature of science as a discipline, as well as strategies for instruction and assessment of student learning. In addition, teacher candidates explore and critically evaluate standards and science curricula. Diversity and gender issues in science education are emphasized. Prerequisite: MTH 115, MTH 116, and MTH 215 or MTH 216 with a grade of "C" or better; to be taken concurrently with ECE 415 and ECE 422; admission to teacher education. Consent of department. Offered Fall, Spring.

ECE 422 Cr.2

Mathematics Methods: Early Childhood/Elementary Education

This course is designed to introduce early childhood/elementary teacher candidates to current methods and practices for teaching mathematics in elementary school classrooms. Teacher candidates deepen their understanding of the scope and sequence of mathematics standards, research-based instructional methods, and assessment strategies designed to support all learners. Prerequisite: MTH 115, MTH 116, and MTH 215 or MTH 216 with a grade of "C" or better; to be taken concurrently with ECE 415 and ECE 421; admission to teacher education. Consent of department. Offered Fall, Spring.

ECE 424 Cr.4

Curriculum and Assessment for Preschool-Kindergarten

Students will demonstrate an understanding and effective use of instructional strategies and authentic assessments for children in preschool through kindergarten. The course will address early learning from both developmental and content perspectives. Students will determine age-appropriate learning opportunities across math, literacy, social studies, science, and the arts in the context of young children's cognitive, motor and social-emotional development. Students will experience a variety of curriculum approaches and will evaluate authentic assessment procedures that monitor young children's learning and inform instruction. Prerequisite: ECE 415; taken concurrently with ECE 455 and ECE 460; admission to teacher education. Consent of department. Offered Fall, Spring.

ECE 425 Cr.3

Field Experience: Infant/Toddler through Preschool

Under the direction of a university supervisor and in cooperation with an approved teacher, the student will engage in a half-time professional experience in a selected early childhood, infant/toddler through preschool setting for seven weeks. Teacher candidates will develop their professionalism, guidance techniques and conflict resolution skills. Teacher candidates will also develop and implement activities and lessons including units of instruction as well as building and maintaining the environment for a designated developmental range. Seven-week course. Prerequisite: ECE 324, ECE 440, and EDS 445; concurrent enrollment in ECE 326, ECE 327, and ECE 490; admission to EC-MC teacher education program; junior standing. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

ECE 430 Cr.4

Creative Experience for Children: Art, Drama, Music, and Movement

This course is designed to develop a philosophy of education that places emphasis on creativity and on the integration of art, music and drama experiences into the curriculum using a Reggio Emilia curricular and philosophical focus. Students will explore the classroom teacher's role in supporting the development of creativity through arts integration across the early childhood and primary curricular areas. Students will plan and implement art, music and drama activities appropriate for use with pre-kindergarten through primary-age children. Prerequisite: ECE 324 or concurrent enrollment; completion of general education arts category (GE08); admission to teacher education; junior standing. Offered Fall, Spring.

ECE 435 Cr.3

Creative Arts and Play in ECE

This course is designed to develop a philosophy of education that places emphasis on creativity and integration of the arts and aesthetics into the curriculum using a philosophical focus. Students will explore the classroom teacher's role in supporting the development of creativity through arts integration across the early childhood and primary curricular areas. Students will plan and implement experiences including art, drama, music, and movement activities appropriate for use with pre-kindergarten through primary-age children. Prerequisite: taken concurrently with ECE 415 or ECE 455; admission to teacher education. Consent of department. Offered Fall, Spring.

ECE 440 Cr.2

Language and Literacy Development of Young Children

An examination of language and literacy development of young children from birth through kindergarten. Topics of study are the development of receptive and expressive language skills, listening comprehension, awareness of print, emergent writing, and early reading. Supporting families as children's first teachers, appropriate experiences at home and in childcare settings, and family literacy programs will be studied. The course will also address developmentally appropriate instructional strategies for young children who struggle with beginning literacy concepts and skills. Prerequisite: ECE 212; ECE 213; EDS 308; EDS 311; admission to teacher education; junior standing. Offered Fall, Spring.

ECE 442 Cr.3

Emergent Literacy and Language Development in Young Children

This course is an examination of language and literacy development of young children from birth through kindergarten. Topics of study are the development of receptive and expressive language skills, listening comprehension, awareness of print, emergent writing, early reading, children's literature and story telling. Supporting families as children's first teachers, culturally responsive experiences at home and in childcare settings, and family literacy programs will be studied. The course will also address developmentally appropriate instructional strategies for young children who struggle with beginning literacy concepts and skills and who have language delays and disorders. Prerequisite: EDS 318 or concurrent enrollment; admission to teacher education. Offered Fall, Spring.

ECE 455 Cr.3

Field Experience II in Early Childhood Education: Birth-Kindergarten

Under the direction of a university supervisor and in cooperation with an approved teacher, the student will engage in a professional experience in a selected early childhood, infant/toddler through kindergarten setting. Teacher candidates will develop their professionalism, guidance techniques, and conflict resolution skills. Teacher candidates will also develop and implement activities and lessons including units of instruction as well as build and maintain the environment for a designated developmental range. Prerequisite: ECE 415; taken concurrently with ECE 424 and ECE 460; admission to teacher education. Consent of department. Offered Fall, Spring.

ECE 460 Cr.3

School, Family and Community Partnerships

This course focuses on the role of the teacher in building strong school-family partnerships. Family systems theory, approaches to meeting the diverse needs of children and families, and the influence of culture on family perspectives of engagement will be explored. The role of the teacher in advocating for and supporting families using a strengths-based approach will be addressed, as will effective strategies for two-way communication and collaborative approaches to meeting the diverse needs of children and families. Social justice, equity, and cultural competence will be examined as factors in supportive communication and collaboration. Prerequisite: ECE 415; taken concurrently with ECE 424 and ECE 455; admission to teacher education. Consent of department. Offered Fall, Spring.

ECE 490 Cr.2

Seminar: Relationships with Children, Families and Professionals

A seminar course focusing on the teacher as decision maker and the use of multiple sources of knowledge in professional practice; knowledge of child development and learning, knowledge of individual children, and knowledge of social and cultural contexts. Course topics include reciprocal relationships with families and professionals, individual variations in development and learning, observation and assessment strategies, theories and approaches to guidance, and promoting family and community involvement. Seven-week course. Prerequisite: ECE 324; to be taken concurrently with ECE 326, ECE 327 and ECE 425; junior standing. Consent of department. Offered Fall, Spring.

Earth Science (ESC) - Courses

Courses

+ESC 101 Cr.4

Earth Environments

This course concentrates on understanding the earth's dynamic environments through the study of processes and physical and human interactions related to the lithosphere, hydrosphere and atmosphere. A scientific approach is used to examine fundamental concepts in earth and environmental science related to topics such as plate tectonics, landform development, atmospheric processes, global climate, and water resources, in order to provide an understanding of how the earth system functions and the human role in these phenomena. Lect. 3, Lab 2. Offered Fall, Spring.

ESC 221 Cr.4

Weather and Climate

An introduction to physical principles and the dynamic processes that govern the behavior of the atmosphere at global and regional scales. Spatial and temporal variations of energy, moisture, circulation, and weather systems; and the patterns of the world climate systems are discussed. Lect. 3; Lab 2. Prerequisite: ESC 101. Offered Fall.

ESC 222 Cr.4

Earth Surface Processes and Landforms

An introduction to the earth surface processes that are dominant in forming various types of landforms. Spatial variations in landforms will be studied both at the local scale and as the outcome of large-scale global processes. Lect. 3, Lab 2. Prerequisite: ESC 101. Offered Spring.

Economics (ECO) - Courses

Courses

+ECO 110 Cr.3

Microeconomics and Public Policy

Introduction to microeconomic principles and their application to decision-making by individuals, businesses, and government. General topics include supply and demand, market structures, product markets, government regulation, income distribution, international trade, and economic analysis of current social issues. Prerequisite: grade of "C" or better in MTH 051 or placement in MTH 150 or higher. Offered Fall, Winter, Spring, Summer.

+ECO 120 Cr.3

Global Macroeconomics

Introduction to the functioning of the world economy. Applications of economic principles to domestic and international problems with an introduction to economic systems, economic thought, and economic history around the world. General topics include the economics of international exchange rates, global macroeconomics, international monetary systems, and economic development. Prerequisite: grade of "C" or better in MTH 051 or placement in MTH 150 or higher. Offered Fall, Winter, Spring, Summer.

+ECO 212 Cr.3

Search for Economic Justice

Through a mixture of face-to-face, online, and experiential methods, students will explore, examine, and compare and contrast the concept of economic justice from several theoretical perspectives including Amartya Sen, John Rawls, and Friedrich Hayek. From there the course will explore human rights and economics, the role of formal and informal institutions and the role of globalization. Students will be exposed to examples of women's rights and how the expansion of personal justice relates to economic development. Lastly, students will be exposed to data and other tools used to measure economic justice, freedom and individual rights through an analysis of different databases on human rights and institutions. Students may only earn credit in one of the following: ANT 212, ECO 212, ENG 212, PHL 212, POL 212. Offered Occasionally.

ECO 230 Cr.3

Data Analysis for Business Applications

Building on the foundation in statistics acquired in STAT 145, students will continue to develop and will apply skills in data analysis to aid in business decision making. These skills include data collection, data summarization, data visualization, statistical inference, and communication of data in business contexts. Students will learn and apply best practices for research design and analysis to address authentic business cases. Students will build these skills in collaboration with each other and through engagement with business and community leaders. The course also discusses effective survey design and current privacy and ethical issues in collecting and using data. Prerequisite: ENG 110 or ENG 112; STAT 145; CBA major, CASSH economics major, or healthcare analytics management minor. Offered Fall, Spring.

ECO 301 Cr.3

Money and Banking

An introduction to money, monetary policy, and banking, and their roles in the modern market economy. Attention is devoted to the current institutional structure in the U.S. and differing views on the relationship between money and the level of economic activity. Prerequisite: ECO 110, ECO 120. Offered Spring.

ECO 305 Cr.3

Intermediate Macroeconomic Analysis

This course is an introduction to the theoretical analysis of the aggregate economy. Topics include the essential mathematics of macro analysis; national income accounting; general equilibrium of the product, money and labor markets; Keynesian, Classical, and Monetarist theories; stabilization policies; and economic growth. Prerequisite: ECO 110, ECO 120; MTH 160, MTH 175 or MTH 207. Offered Fall, Spring.

ECO 307 Cr.3

Introduction to Econometrics

This course is an introduction to regression analysis and its application to economic and business research. Topics include using secondary data sources, simple and multiple regression, and interpretation and communication of results. The course develops various empirical techniques and culminates with a final research paper. Prerequisite: STAT 145 or STAT 245; ENG 110 or ENG 112. Offered Fall, Spring.

ECO 308 Cr.3

Intermediate Microeconomic Analysis

This course covers behavior of consumers, producers and markets. Topics include theories of demand, production and cost, firm decisions, market structures, distribution, general equilibrium, welfare, and externalities. Prerequisite: ECO 110, ECO 120; MTH 160, MTH 175 or MTH 207. Offered Fall, Spring.

ECO 310 Cr.3

Managerial Economics

Application of economic principles for making effective management decisions with regard to strategies dealing with a firm's external environment and internal organization. Topics include: decisions under risk and uncertainty, vertical integration and outsourcing, pricing strategies, creating and capturing value, incentive conflicts and contracts, and issues in personnel economics. Prerequisite: ECO 110; STAT 145. Offered Occasionally.

ECO 312 Cr.3

American Economic Development

American economic growth in historical perspective from the point of view of the economist. Emphasis will be placed on the use of elementary economic theory as a tool to explain the growth of the American economy. Prerequisite: ECO 110, ECO 120. Offered Occasionally.

ECO 319 Cr.3

Public Sector Economics

This course covers theory and policy of revenues and expenditures in the public sector. Public sector issues are analyzed using public choice theory and cost-benefit analysis. Expenditure programs and taxation are considered at the national, state, and local government levels. Prerequisite: ECO 110; junior standing. Offered Occasionally.

ECO 320 Cr.3

Economics of Sports

Economic theory is used to analyze the sports industry. Topics include industry make-up, labor conditions, marketing, economic impact, and discrimination. Prerequisite: ECO 110. Offered Fall, Spring.

ECO 321 Cr.3

Modern Political Economy

An introduction to conservative, liberal, and radical perspectives on the economic process. Topics include the role of government in the economy, the nature of work, business cycles, the environment, and racism and sexism. Prerequisite: ECO 110, ECO 120. Offered Occasionally.

ECO 330 Cr.3

Labor Economics

Theories of wage determination; economic effects of wage determination upon the structure of wages, the distribution of national income, employment, and the price level. Prerequisite: ECO 110, ECO 120. Offered Occasionally.

ECO 333 Cr.3

Behavioral Economics

This course draws on insights from other academic disciplines, particularly psychology, in an attempt to develop better explanations for economic behavior. In particular, the course explores three features of behavior that are de-emphasized in neoclassical economics: bounded rationality, bounded willpower, and bounded self-interest (social preferences). Bounded rationality implies that individuals have limited information-processing capabilities and, as a result, rely on simple heuristics ("rules of thumb") to make decisions. While useful, heuristics can lead to biased probability judgments, overconfidence, status quo bias, loss aversion, and other behaviors that influence economic outcomes. People exhibit bounded willpower when they make decisions that are dynamically inconsistent and in conflict with their long-term well-being (e.g., procrastination, under-saving, addiction, etc.). A focus on social preferences asks us to consider how concerns about fairness might influence labor market outcomes and trust affects the gains from trade and economic growth. By developing models based on realistic assumptions about human behavior, behavioral economists hope to design better institutions and policies to reduce poverty, limit environmental degradation, promote financial and macroeconomic stability, and solve other problems confronting the world. Prerequisite: ECO 110, ECO 120. Offered Fall.

+ECO 336 Cr.3

Women in the U.S. Economy

An introduction to the status of women in the U.S. economy. Topics include alternative perspectives on women, work and the labor force, the value of paid versus unpaid labor, pay equity, the social support network, and the prospects for change. Prerequisite: ECO 110 or ECO 120. Offered Fall, Spring.

ECO 340 Cr.3

Introduction to International Economics

Overview and introduction to international economics and the theory of international trade and the effects of trade and trade policy on the economy. Foreign exchange markets, the balance of payments and basic policy adjustments are also introduced. Prerequisite: ECO 110. Offered Fall, Spring.

ECO 346 Cr.3

Environmental and Ecological Economics

Aspects of the scarcity of renewable and non-renewable natural resources and the management problems associated with their allocation and use are presented from neoclassical and ecological economics perspective. The theoretical foundations for those tools of economic analysis applicable to the analysis of natural resource problems are developed with historical, real-world examples discussed. Attention is concentrated on the policy implications of alternative resource development strategies. Prerequisite: ECO 110. Offered Spring.

ECO 350 Cr.3

Health Economics

Study of the use of resources in health care and the application of economic methods to issues of public health. Topics include organization of health care delivery, relationships between health care and health status, and the economic evaluation of health care services. The U.S. system is compared with those of other nations, focusing on the roles of the consumers and providers in health care markets, and on the roles of government in shaping demand, supply, and utilization. Prerequisite: ECO 110; junior standing. Offered Occasionally.

ECO 360 Cr.1-3

Economic Topics

Emphasis will be on examination and study of current economic issues. Topics will vary from semester to semester. Repeatable for credit - maximum six. Prerequisite: ECO 110, ECO 120; junior standing. Offered Occasionally.

ECO 375 Cr.3

Economic Development

Analysis of the broad problems and constraints limiting economic development in the "Third World" Alternative approaches to development will be considered. Different cultural, material, and human resources present in individual countries will be assessed. Prerequisite: ECO 110, ECO 120. Offered Occasionally.

+ECO/THA 376 Cr.3

Economics of Art and Entertainment

The overall goal of this course is to enable participants to make or evaluate selected decisions and policy issues pertaining to the arts and to better understand the unique status the arts hold in the American economy. Prerequisite: sophomore standing. (Cross-listed with ECO/THA; may only earn credit in one department.) Offered Spring - Odd Numbered Years.

ECO 400 Cr.3

Monetary Theory and Policy

This course is concerned with the theory and practice of monetary policy in the modern market economy, with particular reference to the U.S. economy and institutional framework. Topics covered include: the ability of the central bank to regulate the supply of money and credit conditions; factors affecting the demand for money; and the relationship between changes in the money supply and interest rates and the impact of changes in each of these on other economic variables. Prerequisite: ECO 301; junior standing. Offered Occasionally.

ECO/GEO/HIS/POL/PSY/SOC 408 Cr.4

Teaching and Learning History and Social Studies in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in history and social sciences. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 351. (Cross-listed with ECO/GEO/HIS/POL/PSY/SOC; may only earn credit in one department.) Offered Fall, Spring.

ECO 440 Cr.3

International Financial Economics

The economics of the international monetary system and financial transactions, with emphasis on macroeconomic policy. Balance of payments problems, exchange rate determination and its effect on economic growth and stability, and policies to achieve international market equilibrium are analyzed from a theoretical and empirical point of view. Prerequisite: ECO 120; junior standing. Offered Spring.

ECO 450 Cr.1-6

College of Business Administration Internship

The internship program as conceived and implemented is an unusual program designed to provide an opportunity for students in the College of Business Administration at the University of Wisconsin-La Crosse to participate in an approved program with a cooperating business, government or civic organization for usually 15 weeks of their undergraduate work. For additional information, see internship description under the College of Business Administration catalog section. Repeatable for credit. Prerequisite: cumulative GPA of at least 2.50; ACC 221, ACC 222; BLAW 205; ECO 110, ECO 120, ECO 230; FIN 355; IS 220; MGT 308; MKT 309; admission to business. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

ECO 499 Cr.1-3

Independent Study

Individual reading or research under the guidance of a staff member. Open to selected advanced students who have excellent records in the department. Registration with the consent of the student's regular adviser, the instructor, and the department chairperson. Approval form available in department office; completion of form required prior to registration. Repeatable for credit - maximum six. Consent of instructor. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

Educational Foundations (EFN) - Courses

Courses

EFN 105 Cr.2

Developmental Reading

A course designed to increase reading efficiency by emphasizing improvement in reading comprehension, rate, and vocabulary. Attention is also given to selected study skills including note taking, test taking, and listening. Enjoyment of reading is stressed. Textbook purchase required. Offered Fall, Spring.

EFN 200 Cr.1

Cooperatives

A study of the history and development of cooperatives, a form of business organization voluntarily owned and controlled by member patrons on a nonprofit or cost basis. The social, political and economic aspects of cooperatives constitute the basis for the course. Note: This course is a statutory requirement for all social studies majors and minors (except psychology minors) in middle childhood-early adolescence and early adolescence-adolescence programs. May not count in major or minor (early adolescence-adolescence programs). Offered Spring.

+EFN 205 Cr.3

Understanding Human Differences

The course will focus on human differences and the factors which influence these differences, specifically group identifications. It will explore the interaction between misperceptions and ethnocentric perspectives which foster the development of prejudicial attitudes. It will explain the effect of prejudicial attitudes on expectations for "different" others (stereotyping) and on behavior toward those others (discrimination). It will examine diverse groups in our society and how membership in one or more of these groups affects one's sense of identity and one's opportunities. Offered Fall, Winter, Spring.

EFN 222 Cr.2

Introduction to Choice Theory: Problem Solving Strategies

Examines major concepts from William Glasser's Choice Theory focusing on how they can be applied to promote responsible behavior and create successful living and learning experiences. Emphasis is on understanding basic needs, developing strategies for working with diverse students, learning a variety of approaches for problem solving, and developing specific skills for applying Choice Theory in interpersonal and small group interactions and in conducting group meetings. Prerequisite: sophomore standing; open to resident assistants and desk managers only. Consent of instructor. Offered Occasionally.

EFN 475/575 Cr.1-3

Special Topics Seminar in Education

Special topics in education not covered by current education courses taught in the department. The particular topic selected to be determined by the department according to the current need and interest.

Repeatable for credit - maximum six. Prerequisite: admission to teacher education, or certifiability as a teacher, or consent of the department chair; junior standing. Offered Fall, Winter, Spring, Summer.

EFN/CI 499 Cr.1-6

Individual Study

Reading and research in an area of student interest in education under the direction of an education instructor. Open to elementary and secondary education students with excellent records. Not open to students concurrently enrolled in EFN 499. Prerequisite: junior standing. (Cross-listed with CI/EFN; may earn six credits total in CI and EFN 499.) Consent of instructor. Offered Fall, Winter, Spring, Summer.

Educational Studies (EDS) - Courses

Courses

+EDS 203 Cr.3

School, Society, and Teachers

This course focuses on the historical, philosophical, sociological, legal, and curricular foundations of education. The evolution of education, the role of cultural diversity in education, curriculum and assessment, education standards, and issues and trends in education are explored. It explores the ways educators are positioned within the twenty-first century as well as the contemporary issues they face, including but not limited to school law, governance, ethics, financing, and accountability reforms. Students will begin to articulate their personal philosophies of education through analysis of social class, race, gender, conflicting aims of education, and formal and hidden curricula. This course focuses on teacher education preparation, but is open to all students who are interested in the role of education in society and the roles that teachers play in shaping an educated society. Offered Fall, Winter, Spring, Summer.

+EDS 206 Cr.3

Multicultural Education

This introductory diversity course explores the role that multiculturalism plays in schools and the broader society. This course examines aspects of identity from anthropological, sociological, historical, political, and economic perspectives and how they intersect in school settings. It uses schools as the site for analyzing the ways in which aspects of minority cultures are addressed and incorporated into educational instruction in public schools. Through engagement with diverse texts, activities, and presentations, it prepares students for teaching and working in increasingly diverse and pluralistic schools and communities, and specifically with minority cultures. As part of the course, students learn about and reflect upon Wisconsin Act 31, which refers to the requirement that all public school districts and pre-service education program provide instruction on the history, culture, and tribal sovereignty of Wisconsin's eleven federally-recognized American Indian nations and tribal communities. Moreover, the course maintains a concerted focus on how students, teachers, parents, and community members experience and perceive schooling in the United States. The students in the course develop a nuanced understanding of cultural representation at the individual, institutional, and societal levels by critically examining key texts as well as their own personal experiences. Finally, the course provides future teachers and all citizens with the analytical and pedagogical tools to ensure that multiculturalism is valued, cultivated, and promoted in classrooms across the U.S. Prerequisite: EDS 203 recommended. Offered Fall, Winter, Spring, Summer.

EDS 308 Cr.3

Foundations of Literacy

The focus of this course will be on the language and language arts/literacy development for all learners. This course provides students with the theories, principles, goals, and pedagogical skills for teaching language arts/literacy for elementary and middle level learners. Emphasis will be given to critical literacy including effective practices from multicultural and multilingual literacy perspectives. Teacher candidates will also develop an understanding of political and social dimensions of language arts/literacy education. Prerequisite: EDS 203, EDS 206 or concurrent enrollment; declared education major; sophomore standing. Offered Fall, Spring, Summer.

EDS 309 Cr.3

Teaching Global Perspectives Across the Curriculum

Through a social justice-oriented examination of the cultural, economic, political, and social layers of globalization and global interconnectedness, students will develop reflective stances about global perspectives and understandings. This course prepares students as 21st century globally responsive citizens and educators through an exploration of global issues and how these issues are addressed in K-12 classrooms. Additionally, students will develop their pedagogical practice through analysis and creation of materials and instructional strategies necessary for effective implementation of global education throughout K-12 educational systems. Prerequisite: EDS 203; EDS 206. Offered Fall, Spring, Summer.

EDS 311 Cr.3

Curriculum and Pedagogy: Elementary/Middle Education

The course is designed to consider the nature of a teaching profession, the use of standards in a profession, and responsibilities of PK-12 educators. The role of schools in society will be examined along with the history and politics of school curriculum. Possible levels of curriculum use in schools from knowledge reproduction to curriculum integration will be discussed. Culturally responsive teaching and conflict resolution will be emphasized. Prerequisite: EDS 203, EDS 206; declared education major. Offered Fall, Spring.

EDS 318 Cr.3

Literacy Methods I

This course will focus on the major components of reading/literacy theories and research and how to apply this knowledge to effective teaching practices. It will cover reading processes, assessments, instructional practices, planning interventions, working with diverse learners, and children's literature. Prerequisite: EDS 308. Offered Fall, Spring.

EDS 351 Cr.4

Language, Literacy, and Culture in the Middle Level Classroom

This course is designed to equip teacher candidates to understand theoretical and research-based foundations of literacy processes and instruction. Through an integrated field experience at a local middle school, candidates will learn about the complex processes of planning discipline-specific literacy instruction, engaging students in learning, and assessing student learning. Candidates will further develop understanding and practices related to the topics of academic language, disciplinary literacy, teacher performance assessment (edTPA), text complexity, and conflict resolution. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203; EDS 206; admission to an EC-A or EA-A teacher education program. Consent of department. Offered Fall, Spring, Summer.

EDS 400/500 Cr.1-3

Continuing Education Professional Development

This course provides continuing education opportunities for Educational Professionals on a wide variety of topics. Topics selected for this course will mirror current trends and professional development interests of individual school district or educational institution. Varying topics will be offered with a specific title assigned to each. This course is open to professionals practicing in the education field and offered through the Extended Learning Office (UWLEX). Repeatable for credit with a different topic. EDS 400/500 credits cannot be used toward any Department of Educational Studies undergraduate or graduate programs. Consent of department. Offered Fall, Winter, Spring, Summer.

EDS 402 Cr.3

Field Experience I: Elementary Level

This course is the first field experience in a school environment. Teacher candidates will be introduced to best practices around diversity and inclusive classrooms, professionalism, classroom leadership, and social justice. Teacher candidates will plan and teach lessons within the designated developmental range. A multi-day, consistent schedule (typically 3 consecutive half days) in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 311, EDS 318; must be taken concurrently with EDS 413 and EDS 418; admission to teacher education. Consent of department. Offered Fall, Spring, Summer.

EDS 413 Cr.3

Social Studies Methods

This course provides teacher candidates with an introduction to the issues and best practices in social studies education in elementary and middle level classrooms, promoting the development of inquiry, cultural awareness, multiple perspectives, active learning, and critical thinking. Teacher candidates will explore curriculum, techniques, and materials, which promote powerful and meaningful social studies. Prerequisite: EDS 311, EDS 318; must be taken concurrently with EDS 402 and EDS 418; admission to teacher education. Consent of department. Offered Fall, Spring.

EDS 414 Cr.1

Foundations of Reading Seminar

The purpose of this course is to review and discuss key concepts related to the foundations of reading, including the sub-areas of (1) foundations of reading development (phonological and phonemic awareness, concepts of print and the alphabetic principle, phonics, word analysis skills), (2) development of reading comprehension (vocabulary development, reading comprehension skills and strategies), and (3) reading assessment and instruction (formal and informal assessments, multiple theories and approaches). In addition, the course prepares pre-service and in-service teachers to demonstrate their knowledge and understanding of teaching reading by composing an organized and developed analysis/written response for given teaching reading scenarios. Repeatable for credit - maximum three. Prerequisite: EDS 418 or concurrent enrollment; junior standing. Pass/Fail grading. Offered Occasionally.

EDS 418 Cr.3

Literacy Methods II

The course will focus on teaching reading/literacy strategies and techniques for K-8 classrooms. It will cover pedagogy and application of best practices in literacy instruction. This course is taken concurrently with the Field Experience One courses with a placement in an elementary school classroom. Prerequisite: EDS 318; taken concurrently with EDS 402 and EDS 413. Consent of department. Offered Fall, Spring, Summer.

EDS 421 Cr.3

Science Methods

This course is designed to introduce elementary and middle level teacher candidates to current methods and practices for teaching science in elementary and middle school classrooms. Methods will be investigated regarding the nature of science as a discipline, as well as strategies for instruction and assessment of student learning. In addition, teacher candidates will explore and critically evaluate standards and science curricula. Diversity and gender issues in science education will also be emphasized. Prerequisite: EDS 402; MTH 135 with a grade of "C" or better, or MTH 115, MTH 116, and MTH 215 or MTH 216 with a grade of "C" or better; to be taken concurrently with EDS 422 and EDS 446 or EDS 445; admission to teacher education. Consent of department. Offered Fall, Spring.

EDS 422 Cr.2

Mathematics Methods

This course is designed to introduce elementary and middle level teacher candidates to current methods and practices for teaching mathematics in elementary and middle school classrooms. Teacher candidates will deepen their understanding of the scope and sequence of mathematics standards, research-based instructional methods and assessment strategies designed to support all learners. Prerequisite: EDS 402; MTH 135 with a grade of "C" or better, or MTH 115, MTH 116, and MTH 215 or MTH 216 with a grade of "C" or better; to be taken concurrently with EDS 421 and EDS 446 or EDS 445; admission to teacher education. Consent of department. Offered Fall, Spring.

EDS 445 Cr.2

Field Experience II: Early Childhood-Middle Childhood/Middle Childhood-Early Adolescence

This course is the second field experience in a school environment. Teacher candidates will further develop their professionalism, classroom management techniques, and conflict resolution skills. Teacher candidates will develop and teach lessons including units of instruction as well as building and maintaining the classroom environment within the designated developmental range. A multi-day, consistent schedule (typically 3 consecutive half days) in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 402; to be taken concurrently with EDS 421 and EDS 422; taken concurrently with EDS 452 (MC-EA majors only); admission to an EC-MC or MC-EA teacher education program; junior standing. Consent of department. Offered Fall, Spring.

EDS 446 Cr.3

Field Experience II: Middle Level

This course is a middle level field experience for an elementary/middle teacher candidates. Teacher candidates will further develop best practices around diversity and inclusive classrooms, professionalism, classroom management, conflict resolution, and social justice. Teacher candidates will develop and teach lessons as well as build and maintain the classroom environment. This class includes a one-hour/once a week seminar and a multi-day field experience. The field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher (usually three consecutive half days). Prerequisite: EDS 402; to be taken concurrently with EDS 421, EDS 422, and EDS 452; admission to teacher education. Consent of department. Offered Fall, Spring.

EDS 450 Cr.2

Field Experience II: Early Childhood-Adolescence

This course is a second field experience in a school environment for teacher candidates pursuing a major in the EC-A developmental range. Teacher candidates will further develop their professionalism, classroom management techniques, and conflict resolution skills. Teacher candidates will develop and teach lessons including units of instruction as well as building and maintaining the classroom environment within the designed developmental range. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 351; admission to an EC-A (art, music) teacher education program; junior standing. Consent of department. Offered Fall, Spring.

EDS 452 Cr.3

Philosophy and Curriculum for Young Adolescent Learners

This course is designed to prepare teacher candidates (TCs) for full professional involvement in schools by being able to understand and implement current educational research and reform efforts. Building on the curriculum, instruction, and assessment models learned in earlier courses, TCs will learn to function in professional learning communities (PLCs) to implement curriculum and educational reforms including integrated curriculum, responsive classrooms, effective classroom management, and family/community engagement. A focus on middle level pedagogy (i.e., meeting the academic, social-emotional, and behavioral needs of the young adolescent learner) will undergird this course. Prerequisite: EDS 402; taken concurrently with EDS 421, EDS 422, and EDS 445 or EDS 446; admission to teacher education. Consent of department. Offered Fall, Spring.

EDS 463 Cr.3

Designing Instruction and Ongoing Assessment for Diverse Learners

This course addresses multiple critical skills for teacher candidates. This class has been designed to better prepare teacher candidates to make valid and reliable data-driven decisions for all students, to include exceptional learners. Students will be presented with information to help them better understand why the effective use of data is critical in providing quality instruction and fundamental in implementing a culture of continuous data to improve teaching and learning. Some of the specific topics covered in the course are teacher beliefs, data literacy (to include being able to describe comprehensive views of data sources and data privacy), Universal Design for Learning (UDL), tiered systems of support (e.g., MTSS, RtI, PBIS), curriculum-based evaluations, formative and summative assessments, evidence-based practices, and progress monitoring procedures. Prerequisite: SPE 401; admission to the teacher education program; junior standing. Offered Fall, Spring, Summer.

EDS 475/575 Cr.1-3

Educational Studies Special Topics

The purpose of this course is to provide opportunities for teacher candidates or aspiring teachers to gain experience and knowledge for education topics. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit - maximum 18. Offered Fall, Winter, Spring, Summer.

EDS 490 Cr.1-11

Student Teaching: Early Childhood Education (birth-grade 3)

Student teaching is a culminating professional experience that spans "full days for a full semester following the daily schedule and semester calendar of the cooperating school" (per WI licensing statute 118.19(3)(a)) in selected K-12 schools with qualified, approved cooperating teachers. Orientation, seminars, and other professional experiences are also required. May be repeated for credit in a subsequent semester for each additional licensure. Registration occurs through the Office of Field Experience only. Prerequisite: completion of education requirements, including special methods courses; appropriate education faculty recommendation; 2.75 cum GPA and 2.75 GPA in major and professional coursework; passing content competency benchmarks; passing scores in WI Foundations of Reading Test. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

EDS 491 Cr.1-11

Student Teaching: Elementary/Middle Education (K-9)

Student teaching is a culminating professional experience that spans "full days for a full semester following the daily schedule and semester calendar of the cooperating school" (per WI licensing statute 118.19(3)(a)) in selected K-12 schools with qualified, approved cooperating teachers. Orientation, seminars, and other professional experiences are also required. May be repeated for credit in a subsequent semester for each additional licensure. Registration occurs through the Office of Field Experience only. Prerequisite: completion of education requirements, including special methods courses; appropriate education faculty recommendation; 2.75 cum GPA and 2.75 GPA in major, concentration, and professional coursework; passing content competency benchmarks; passing scores in WI Foundations of Reading Test. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

EDS 492 Cr.1

Student Teaching Seminar

This seminar course provides an opportunity to discuss and further develop teacher candidates' critical thinking regarding issues of the field and practice of educating school-age individuals. As a result of this course teacher candidates will discuss current issues experienced within their student teaching experiences as well as issues around the areas of professionalism, conflict resolution, and classroom management. Prerequisite: to be taken concurrently with EDS 490, EDS 491, EDS 493, EDS 494, EDS 495, EDS 496, and/or EDS 497; admission to teacher education; passing content competency benchmarks; passing scores in Wisconsin Foundations of Reading Test and/or ACTFL oral & written proficiency rating of "Intermediate-High" for modern language certification candidates. Consent of department. Pass/Fail grading. Offered Fall, Spring.

EDS 493 Cr.1-11

Student Teaching: Early Childhood-Middle Childhood/Middle Childhood-Early Adolescence

Student teaching is a full day, full school semester, professional experience in selected elementary and secondary schools with qualified, approved cooperating teachers. Orientation, seminars, and other professional experiences are also required. May be repeated for credit in a subsequent semester for each additional licensure. Registration occurs through the Office of Field Experience only. Prerequisite: completion of education requirements, including special methods courses; appropriate education faculty recommendation; 2.75 cum GPA and 2.75 GPA in major, minor, concentrations & professional coursework; passing content competency benchmarks; passing scores in WI Foundations of Reading Test and/or ACTFL oral & written proficiency rating of "Intermediate-High" for modern language certification candidates. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

EDS 494 Cr.1-11

Student Teaching: Early Childhood-Adolescence/Early Adolescence-Adolescence

Student teaching is a full day, full school semester, professional experience in selected elementary and secondary schools with qualified, approved cooperating teachers. Orientation, seminars, and other professional experiences are also required. May be repeated for credit in a subsequent semester for each additional licensure. Registration occurs through the Office of Field Experience only. Prerequisite: completion of education requirements, including special methods courses; appropriate education faculty recommendation; 2.75 cum GPA and 2.75 GPA in major, minor, concentrations & professional coursework; passing content competency benchmarks; and/or ACTFL oral & written proficiency rating of "Intermediate-High" for modern language certification candidates. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

EDS 495 Cr.1-11

Teaching Internship

Teaching internship is a full day, full school semester, professional experience in selected PK-12 schools with qualified, approved cooperating teachers. Orientation, seminars, and other professional experiences are also required. Must apply and be selected for an approved internship opportunity through the Office of Field Experience. Must be licensed as an intern according to PI 34.028 of Wisconsin State code for educator licenses. Registration occurs through the Office of Field Experience only. Prerequisite: completion of other education course requirements; appropriate education faculty recommendation; 3.0 cum GPA; passing content competency benchmarks; ACTFL oral & written proficiency rating of "Intermediate-High" for world language certification teacher candidates; passing scores in WI Foundations of Reading Test for EC-MC & MC-EA teacher candidates; acceptance into internship opportunity by Office of Field Experience. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

EDS 496 Cr.1-11

Student Teaching: Middle/High School Education (4-12)

Student teaching is a culminating professional experience that spans "full days for a full semester following the daily schedule and semester calendar of the cooperating school" (per WI licensing statute 118.19(3)(a)) in selected K-12 schools with qualified, approved cooperating teachers. Orientation, seminars, and other professional experiences are also required. May be repeated for credit in a subsequent semester for each additional licensure. Registration occurs through the Office of Field Experience only. Prerequisite: completion of education requirements, including special methods courses; appropriate education faculty recommendation; 2.75 cum GPA and 2.75 GPA in major, concentration, and professional coursework; passing content competency benchmarks. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

EDS 497 Cr.1-11

Student Teaching: Kindergarten through Grade 12 (K-12)

Student teaching is a culminating professional experience that spans "full days for a full semester following the daily schedule and semester calendar of the cooperating school" (per WI licensing statute 118.19(3)(a)) in selected K-12 schools with qualified, approved cooperating teachers. Orientation, seminars, and other professional experiences are also required. May be repeated for credit in a subsequent semester for each additional licensure. Registration occurs through the Office of Field Experience only. Prerequisite: completion of education requirements, including special methods courses; appropriate education faculty recommendation; 2.75 cum GPA and 2.75 GPA in major, concentrations, and professional coursework; passing content competency benchmarks; passing scores in WI Foundations of Reading Test for special education candidates; passing scores in ACTFL oral and written proficiency rating of "Intermediate-High" for modern language certification candidates. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

English (ENG) - Courses

Courses

ENG 100 Cr.3

College Writing Workshop

This course offers students additional practice in and strategies for developing writing skills in post-secondary academic contexts. Students will be reading, writing, and engaging in a variety of activities that will provide them with opportunities to practice effective writing processes, to develop flexible habits of mind, and to engage in information literacy practices. Prerequisite: concurrent enrollment in ENG 110 with English Placement Test (EPT) score of 325 or below. Concurrent enrollment in ENG 110 with an EPT score between 330-350 and the Multiple Measures Placement (MMP) may be required as determined by the English department. Consent of department. Offered Fall.

+ENG 110 Cr.3

College Writing

This course in composition addresses writing as a symbolic action that writers participate in for multiple purposes, with diverse audiences, and in various genres. It emphasizes writing as a thinking process through the learning and practice of rhetorical strategies for inquiry, persuasion, and collaboration in context. (Students who qualify with a grade of "C" or better in ENG 110 will be exempt from further writing requirements in the general education skills category, but this does not exempt students from the writing emphasis course requirements. Students receiving a grade less than "C" must repeat ENG 110.) Prerequisite: English Placement Test (EPT) score. Not open for credit for students with credit in ENG 112. Offered Fall, Spring.

+ENG 112 Cr.3

College Writing AP (Advanced Placement)

This course in composition addresses writing as symbolic action that writers participate in for multiple purposes, with diverse audiences, and in various genres. It emphasizes writing as a thinking process through the learning and practice of rhetorical strategies for inquiry, persuasion, and collaboration in context. (Students will be challenged at a level appropriate to their placement. Students who qualify with a grade of "C" or better in ENG 112 will be exempt from further writing requirements in the general education skills category, but this does not exempt students from the writing emphasis course requirement. Students earning a grade lower than "C" must repeat ENG 112.) Prerequisite: English Placement Test (EPT) score and a score of 3 or 4 on the AP Placement Tests (Rhetoric/Writing or Literature). Not open for credit for students with credit in ENG 110. Offered Fall, Spring.

+ENG 200 Cr.3

Literature and Human Experience

Intensive study of selected literary texts, with emphasis on various ways of reading, studying, and appreciating literature as an aesthetic, emotional, and cultural experience. Content varies with instructor. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. Offered Fall, Spring.

+ENG 201 Cr.3

American Literature before 1865

An exploration of American literature from early times to the late nineteenth century; including such authors as Bradstreet, Franklin, Hawthorne, Poe, Melville, and Dickinson. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. Offered Fall, Spring.

+ENG 202 Cr.3

American Literature after 1865

An exploration of American literature from the late nineteenth century to the present; including such authors as Twain, Freeman, James, Chopin, Frost, Hemingway, Faulkner, Wright, and Bellow. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. Offered Fall, Spring.

+ENG 203 Cr.3

British Literature before 1800

Encounters with major works of English literature from the medieval period through the eighteenth century, including fiction, drama, essays, and poetry. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. Offered Fall, Spring.

+ENG 204 Cr.3

British Literature after 1800

Encounters with major works of English literature of the nineteenth and twentieth centuries, including fiction, drama, essays, and poetry. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. Offered Fall, Spring.

+ENG 205 Cr.3

Western Literature before 1700

An examination of the expression and development of the ideas and values of Western Civilization in time-honored works of literature ranging from Biblical times, through the Greek and Roman eras, to the European Middle Ages and the Renaissance. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. Offered Fall, Spring.

+ENG 206 Cr.3

Western Literature after 1700

An examination of the conflicting ideas and values of Western Civilization as expressed in the literature of the eighteenth, nineteenth, and twentieth centuries; with special attention to the literary and cultural impact of science and modern philosophy and the roots and identity of the modern age. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. Offered Fall, Spring.

+ENG/RGS 207 Cr.3

Multicultural Literature of the United States

This course examines cultural themes in American literature in an effort to enhance student awareness of the multi-ethnic nature of American culture. Students engage in close reading, discussion, analysis, and interpretation of texts written by individuals from a variety of American ethnic and cultural backgrounds. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. (Cross-listed with ENG/RGS; may only earn credit in one department.) Offered Fall, Spring.

+ENG 208 Cr.3

International Studies in Literature

A study of representative authors from selected regions and ages of the world, ranging from such non-Western traditions as the Indic, Arabic, African, Chinese, and Japanese to such Western traditions as the Icelandic, Scandinavian, Australian, Russian, and South American. Content and focus vary with instructors. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. Offered Occasionally.

+ENG/RGS 210 Cr.3

Literature of Black America

Survey and exploration of Black American prose and poetry from their eighteenth century beginnings to the end of the Harlem Renaissance and the depression years. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. (Cross-listed with ENG/RGS; may only earn credit in one department.) Offered Fall, Spring.

+ENG 212 Cr.3

Search for Economic Justice

Using humanistic and social scientific approaches, students will explore movements for economic empowerment as a critical dimension of justice in the increasingly global world. Through a mixture of face-to-face, online, and experiential methods, students will examine connections between the individual and larger systems and between the local and the global. They will critically analyze economic and political structures and movements as they pertain to gender, race, ethnicity, and class. The course will be informed by the perspectives of English, economics, political science, philosophy, anthropology, and women's, gender and sexuality studies. Students may only earn credit in one of the following: ANT 212, ECO 212, ENG 212, PHL 212, POL 212. Offered Occasionally.

+ENG/ERS 215 Cr.3

African American Authors

A study of the principal post-depression (1940 to present) African American authors, critics, and scholars which clarifies the relationship between these writers and the general field of American literature and which illustrates their unique contributions as representatives of African American culture. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. (Cross-listed with ENG/ERS; may only earn credit in one department.) Offered Fall, Spring.

+ENG 220 Cr.3

Women and Popular Culture

Fundamentals of cultural studies, with a focus on analyzing representations of women in modern American popular culture and their historical reception. Primary texts from media such as film, television, advertising, and popular fiction will be studied for how they communicate cultural values regarding women and femininity. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. Offered Occasionally.

ENG 299 Cr.1

Writing Tutor Practicum

This course is designed to offer training and supervision for Writing Center tutors. The course will include an overview of writing center history and theory, an overview of writing process theory, and examination of best practices for tutoring various client populations. Students will develop a reflective tutoring practice based on readings and course discussions. The course must be taken during the student's first semester of employment in the Writing Center. Failure to complete the course will result in termination of employment in the Writing Center. Students who repeat the course will engage more deeply with the content. Prerequisite: ENG 110 or ENG 112. Consent of instructor. Pass/Fail grading. Offered Fall, Spring.

ENG 300 Cr.3

Introduction to English Studies

English departments have been home to some of the most important debates around language, writing, and identity. This course explores the dynamic nature of English studies and the contemporary relevance of the field by pursuing some of the following questions: What is English studies? How do we account for disciplinary change over time? How do the various fields in English studies create knowledge? How does English studies prepare students to be thinkers, professionals, and global citizens? Prerequisite: ENG 110 or ENG 112. Offered Fall, Spring.

ENG 301 Cr.3

Foundations for Literary and Cultural Studies

This course is an introduction to foundational knowledge and skills for the advanced study of literature and culture. The course fosters understanding of the importance of historical and intellectual contexts for literary and cultural studies and an appreciation for diverse literary genres and forms of cultural expression. Facility for critical work with literary and cultural texts is developed through expanding students' knowledge of basic literary terminology and acquainting them with various cultural theories. Students also gain practice conducting close textual analyses and researching and writing about literary and cultural texts. Focus may vary by instructor. Prerequisite: three credits in 200 level English courses. Offered Fall, Spring.

ENG 302 Cr.3

Intermediate Topics in Literature

An intermediate course exploring selected topics in literature in relation to various historical or cultural contexts. Topics vary according to the interests of students and the instructor. Sample topics include: Horror Literature and Film; Classical Greek Drama and Culture; the Bible and/as Literature; Literature and Existentialism; Blues, Jazz, and Literature. Open to all students. Consult English Department for application to major or minor. Repeatable for credit - maximum six. Only three credits may be applied to an English major or minor. Prerequisite: three credits in 200 level English courses. Offered Fall.

ENG 303 Cr.3

Special Topics in Writing and Rhetoric Studies

An intermediate topics course engaging disciplinary conversations in writing and rhetoric studies. Topics vary by instructor. Prerequisite: ENG 110 or ENG 112. Offered Fall, Spring.

ENG 304 Cr.3

Writing in the Arts and Humanities

An advanced writing course designed especially for students majoring in the arts and humanities. The course will focus on the types of inquiry and discourse appropriate to these disciplines. Students will be instructed in the rhetorical strategies of invention (that is, discovering content and establishing lines of reasoning, analyzing audience, and determining the writer's purpose and persona), arrangement and style. Not open for credit in the English education major or minors except for credit in the professional writing minor. Prerequisite: ENG 110 or ENG 112; sophomore standing. Offered Annually.

ENG 305 Cr.3

Creative Writing

An advanced course which emphasizes the writing of poetry, short fiction, and analytical-evaluative writing about each of these genres. The course is taught by a practicing and published fiction writer or poet and is intended as the basic course in the creative writing English minor. It is also for those students interested in writing short fiction and/or poems. Prerequisite: ENG 110 or ENG 112. Offered Fall, Spring.

ENG 306 Cr.3

Writing in Education

An advanced writing course open to students who intend to become teachers in any field. This course helps students achieve several goals: understanding and practicing the several steps of the writing process and the various types of writing; exploring the ways in which writing can be a method of learning; strengthening composition skills; developing a "theory of composition" (a set of principles) which will serve students well both as writers and as teachers of writing. Not open for credit in the creative writing minor. Prerequisite: ENG 110 or ENG 112; sophomore standing. Offered Fall.

ENG 307 Cr.3

Writing for Management, Public Relations and the Professions

An advanced writing course designed to introduce students to theories and practices of workplace writing through genres such as personal brand statements, application materials, correspondence, memos, proposals, reports, press releases, and others. Students will work independently, collaboratively, and ethically to address the needs of internal and external audiences. Through this work, students will also learn project management strategies and be able to respond successfully to rapidly-changing workplace contexts and stakeholders. Prerequisite: ENG 110 or ENG 112; sophomore standing. Offered Fall, Spring.

ENG 308 Cr.3

Technical Writing

An advanced writing course designed to introduce students to theories and practices of writing and designing technical information using various media and technology (i.e. digital, print, audio, video, etc.), through such genres as infographics, podcasts, white papers, technical instructions, documentation, and others. Students will work independently and collaboratively to address the needs of diverse users by ethically and accessibly communicating technical information. Through this work, students will also learn project management strategies and be able to respond successfully to rapidly-changing contexts. Prerequisite: ENG 110 or ENG 112; sophomore standing. Offered Annually.

ENG 309 Cr.3

Writing in the Sciences

An advanced writing course for students in the sciences. The course will focus both on the role writing plays in the conduct of scientific work and on the rhetorical and stylistic conventions of the various scientific disciplines: in short, on the relationship between writing and scientific knowledge. Taught through an inquiry process, students will be led to develop their composition skills and understanding as they discover the procedures and conventions of their individual disciplines. Not open for credit in the English education major or minors except for credit in the professional writing minor. Prerequisite: ENG 110 or ENG 112; sophomore standing. Offered Annually.

ENG 310 Cr.3

Digital Content Writing, Strategy, and Experience Design

This course is designed to develop rhetorical knowledge of and practice in digital content strategy, written content creation, and user experience design for professional organizations across multiple platforms, including websites, social media, blogs, and other professional digital spaces. Students will develop skills in content strategy and user experience/user interface design for professional digital ecologies/networks, including those within mobile and desktop interfaces. The course will also introduce students to tracking and measuring data analytics, integrating search engine optimization, and developing content strategies to optimize professional and technical writing across digital platforms and situations. Prerequisite: ENG 110 or ENG 112; sophomore standing. Offered Fall, Spring.

ENG 311 Cr.3

Critical Theory

Students in this course will study various major theoretical schools and begin to develop their conceptual literacy in approaching literary and other cultural texts (for example, creative and other modes of writing, public discourses, aesthetic and/or social movements, images, film, and other media). The course will facilitate students' dynamic participation in the unfolding conversations and debates about texts and culture. Prerequisite: three credits in 200 level English courses. Offered Fall, Spring.

ENG 312 Cr.3

Literature, Medicine, and Culture

This course introduces students to key concepts and theories in the study of medicine and culture with a focus on careful analysis of literary and cultural texts from multiple periods and genres. Guided practice in reading and writing will deepen students' ability to recognize, interpret, and understand how diverse human experiences relating to health, illness, ability, care, and cure are culturally situated and engage multiple intersecting personal, social, and/or professional values. Prerequisite: three credits in 200 level English courses. Offered Annually.

ENG 313 Cr.3

Writing, Genre, and Style

This course invites students to interrogate their own use and understanding of style while also introducing them to key stylistic concepts such as the use of emphasis, coherence, clarity, conciseness, balance, and rhythm. Students will practice these concepts in their own writing and the writing of others via the use of rhetorical tropes and figures and within the framework of rhetorical genre studies. Prerequisite: ENG 110 or ENG 112. Offered Fall, Spring.

ENG 314 Cr.3

Grant Writing

This course provides students with an opportunity to develop knowledge of theories and practice in philanthropic grant writing. Students will work in teams to help clients fundraise for social change, investigating political, social, and cultural aspects and practices of grant writing within the context of local organizations. Students will develop skills in identifying sources of grant funding, engage in various research methods, analyze stakeholder needs, and learn to rhetorically respond to requests for proposals. The course will also explore grant-related writing genres and conventions such as planning documents, needs assessments, letters of inquiry, project descriptions, and requests for proposals. Prerequisite: ENG 110 or ENG 112. Offered Fall.

ENG 315 Cr.3

Rhetoric, Health, and Medicine

How do scientific communities achieve consensus about medical knowledge? And how does that medical knowledge make its way into peoples' daily lives? Given the overwhelming amount of contradictory information about what it means to be healthy, how can people make informed decisions about their healthcare? Given the complexity of medical knowledge, how can people acquire medical literacies? Who counts as a medical expert? This course explores rhetorical strategies that medical researchers and practitioners, patients, and advocates use to make healthcare-related decisions. Through careful analysis of technical writing (such as experimental articles and research reviews) and popular media (such as newspaper articles, television programs, blogs, and social media posts), students will approach health and medicine as socially constructed enterprises, which are profoundly mediated through language and other symbolic systems. Through guided research and practice composing in various genres, students will develop strategies for ethically contributing to technical and public debates about health and medicine. Prerequisite: ENG 110 or ENG 112. Offered Annually.

ENG 317 Cr.3

Writing for Stage and Screen

Students in this course achieve a broad introduction to the art and craft of writing screen and stage plays. Course readings will include models in each genre and exercises designed to stimulate creative processes. Critical assignments will challenge students to recognize and articulate principles of stage and screen drama. Creative assignments will challenge students to create their own original works in each genre. Each student will provide a script for review by the full class in a workshop setting, and the course will provide opportunities for staging, video production, or dramatic reading of students' works. Prerequisite: ENG 200-level course. Offered Every Third Semester.

ENG 318 Cr.3

Journalism and New Media

This course introduces students to the histories and practices of journalism and new media. Students can expect to examine such issues as the rise of modern journalism, the transition to digital media, ethics and free speech issues, the globalization of news, as well as writing genres particular to different platforms. Prerequisite: ENG 110 or ENG 112. Offered Annually.

ENG 320 Cr.3

Literary Journal Production

This is a workshop-style course in which students assemble and publish Steam Ticket, a nationally-distributed literary journal that attracts submissions from international authors and artists. Each student serves in positions such as Fiction Editor, Poetry Editor, Copy Editor, Managing Editor, Social Media Strategist, Staff Photographer, etc. Students gain real-world experience in publishing, titles to include on resumes, and exposure to contemporary trends in literature. Emphasis will be placed on interdisciplinary and multicultural content and participation. Repeatable for credit - maximum six. Only three credits may be applied toward any individual major or minor. Prerequisite: 300 level writing course. Offered Spring.

ENG 325 Cr.3

Multimedia News Writing and Editing

This class offers study and practice in news gathering and writing. Through mostly hands-on training in news reporting, writing, and editing, students will learn both traditional journalism skills and multimedia production, such as videography and photography. Students will produce news stories for a multi-platform news online production, which may include a website, a Facebook page, a Twitter account, and a YouTube channel. Stories will be assigned, reported, written, published online (when publishable) and shared on social media. All platforms are open to the public. Prerequisite: ENG 110 or ENG 112. Offered Annually.

ENG 326 Cr.3

Feature and Specialized Writing

Writing feature articles for newspapers and magazines; includes study of genre and practice with information gathering, interviewing, and composing and editing techniques. Application of reporting and writing techniques to specialized areas of news, such as editorials, reviews, sports, science and business; includes critical and interpretive writing. Prerequisite: ENG 110 or ENG 112. Offered Annually.

ENG 327 Cr.3

Publishing in a Digital Age

Practice in and critical examination of publication design, including research, writing, editing, layout, design, theory, software, and digital imagery. Prerequisite: ENG 110 or ENG 112. Offered Fall.

ENG 330 Cr.3

History of the English Language

A survey of the historical development of English language structure and usage in the Old English, Middle English, Early Modern English, and Modern English periods. Prerequisite: ENG 110 or ENG 112. Offered Fall.

ENG 331 Cr.3

Introduction to Linguistics: Sounds and Words

An introduction to linguistics focused on phonetics, phonology, morphology, and lexical semantics. Some attention is given to language acquisition and language variation at the levels of phonology, morphology, and the lexicon. Prerequisite: ENG 110 or ENG 112; students cannot earn credit in both ENG 331 and TSL 340. Offered Fall.

ENG 332 Cr.3

Introduction to Linguistics: Phrases and Sentences

An introduction to linguistics focused on syntax and compositional semantics. Some attention is given to language acquisition and language variation at the level of syntax. Development of skills for analyzing and describing the syntax of any human language; however, English will be the primary language of analysis. Prerequisite: ENG 110 or ENG 112. Offered Spring.

ENG 333 Cr.3

Introduction to Writing and Rhetoric Studies

An introductory course which presents theories of composition and rhetoric, emphasizing both conceptual knowledge and practical skills. Prerequisite: ENG 110 or ENG 112; at least sophomore standing. Offered Fall, Spring.

ENG 334 Cr.3

Language Study for Teachers

Designed for pre-service teachers, this course is intended to provide a theoretical base for structuring effective language education, for teaching writing and other language activities, and for understanding linguistic diversity. It will cover issues basic to understanding how language acquisition is a developmental process and how language functions in thinking, learning, and social interaction. Prerequisite: ENG 110 or ENG 112. Offered Occasionally.

ENG 335 Cr.3

Introduction to Professional and Technical Writing

This course is designed as an introductory course for students who are interested in writing in professional settings. The course will include an introduction to various field definitions of professional and technical writing, an overview of professional and technical writing history and theory, provide space to study key concepts that are currently relevant in the field, and apply these histories and concepts to concrete documents that constitute study in the field of professional and technical writing. Prerequisite: ENG 110 or ENG 112; sophomore standing. Offered Fall, Spring.

ENG 336 Cr.3

Varieties of English

In-depth study of a variety of English (e.g., African American English, Old English, Chicano English) or a varietal theme (e.g., English-based creoles, regional varieties of American English, World Englishes). Variety/theme will vary according to the instructor. For current content, consult the instructor or the English Department. Prerequisite: ENG 110 or ENG 112. Offered Spring.

ENG 337 Cr.3

The Rhetorics of Style

A rhetorical study of different views of style, this course focuses on how to write clearly and effectively. Systematically, students learn and practice strategies that are both stable and dynamic relative to the basic structures of sentences, paragraphs, and documents and participatory in the unfolding of human inquiry. By using a historical approach, the course also guides students in practicing the strategies by reflecting and writing on topics such as grammar and style, the politics of style, and the ethics of style. Prerequisite: ENG 110 or ENG 112. Offered Occasionally.

ENG 339 Cr.3

Topics in Linguistics

Study of linguistics topics of special interest. Topics reflect the research interests of instructors and new developments in the discipline. For current content, consult the instructor or the English Department. Repeatable for credit - maximum nine. Only three credits may be applied to an individual English major or minor, including linguistics. Prerequisite: ENG 110 or ENG 112. Offered Occasionally.

ENG 341 Cr.3

Pedagogical Approaches to Young Adult Literature

This course focuses on pedagogical approaches to using young adult (YA) literature as a tool for understanding adolescent experiences in the Secondary English classroom. It is designed for teacher candidates who want to learn how to integrate YA literature into their future classrooms. Students will read a variety of texts in multiple genres, exploring the breadth and richness of YA literature in terms of form, style, and cultural diversity. Students will learn the intricacies of text selection and strategies for facilitating discussions. They will also learn how to incorporate technology to encourage higher-order thinking, how to align curriculum to the Common Core Standards, and how to use YA literature strategically within a traditional curriculum that favors canonical texts. Prerequisite: three credits in 200 level English courses. Offered Annually.

ENG 342 Cr.3

The Essay

The development of the essay form and extensive reading of contemporary examples. Prerequisite: three credits in 200 level English courses. Offered Occasionally.

ENG 343 Cr.3

Creative Nonfiction

An advanced course which emphasizes the personal essay, memoir, and other forms that blur the distinction between fiction and factual writing. While creative nonfiction may be informative, it may also be personal and lyrical. Students will study voice, prose style, and techniques of structuring content. Prerequisite: ENG 110 or ENG 112. Offered Every Third Semester.

ENG 344 Cr.3

The Novel

A course focusing on the history and development of the novel, from its putative origins in 18th-century England to its postmodern realizations on the world literature scene. Various theoretical explanations of the novel's forms and social functions will be examined. The course will foster an understanding of the way narrative discourse functions as a mode of rhetoric, capable of persuading individual readers and even influencing historical trends. The course will also address the variety of formal approaches within the genre, from epistolary, historical and Gothic novels to novels of manners, novels of social protest, and psychological and stream-of-consciousness novels. Individual instructors may select examples from both the "high" and "low" forms of the genre, and may include English translations of foreign works. Prerequisites: three credits in 200 level English courses. Offered Every Third Semester.

ENG 348 Cr.3

Studies in Film and Literature

This course is an introduction to the study of film and film criticism with some attention to the history of the medium and its relation to literary genres. Prerequisites: three credits in 200 level English courses. Offered Annually.

ENG 349 Cr.3

Drama

An introduction to dramatic literature of the world. This course prepares the student to understand the elements of dramatic writing and staging of plays. Dramatic works will be selected from a variety of countries and historical periods to provide an overview of this genre, as well as the foundations needed for future study. Prerequisites: three credits in 200 level English courses. Offered Annually.

ENG 351 Cr.1

Workshop in Classroom Management

This workshop provides an opportunity to discuss and further develop teacher candidates' critical thinking regarding issues of English Language Arts instruction for grades 4-12. Students in this course develop their reflective teaching practice, focusing on issues of professionalism, classroom management, and conflict resolution. Prerequisite: concurrent enrollment in ENG 355; admission to teacher education. Consent of department. Offered Fall, Spring.

ENG 355 Cr.4

Field I Experience: English in the Middle Grades

This course is designed to equip teacher candidates to understand theoretical and research-based foundations of middle grades ELA classroom instruction. Using young adult literature as a tool for understanding adolescent experiences and literacy development, teacher candidates will learn the intricacies of text selection and strategies for facilitating discussions and supporting adolescents in developing presentation strategies. They will also learn how to incorporate technology to encourage higher-order thinking, how to align curriculum to instructional standards, and how to use middle grades literature strategically within a traditional curriculum. Through an integrated field experience at a local middle school, candidates will learn about the complex processes of planning discipline-specific literacy instruction, engaging students in learning, and assessing student learning. Candidates will further develop understanding and practices related to the topics of academic language, disciplinary literacy, teacher performance assessment, text complexity, and conflict resolution. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisites: ENG 110 or ENG 112; at least one 200-level English course; concurrent enrollment in ENG 351; admission to teacher education. Consent of department. Offered Fall, Spring.

ENG 356 Cr.3

European Literature in Translation

A course focusing on classics of European literature. Individual instructors devise their own reading lists according to their own historical or thematic approaches, but most, if not all, of the readings will be translations from European languages other than English. This course aims to give students an understanding of various genres and traditions in European literature and to facilitate an enhancement of students' critical and communicative skills. Prerequisites: three credits in 200 level English courses. Offered Every Third Semester.

ENG 357 Cr.3

World Literature

A course designed to provide diversity education by studying world literatures from different regions and historical periods, ranging from ancient to modern Middle East, Africa, Asia, South Asia, Europe, and the Americas. Focus and content will vary with instructor. However, each instructor will cover at least two distinct world traditions. Prerequisites: three credits in 200 level English courses. Offered Annually.

ENG 361 Cr.3

Old and Middle English Literature

An introduction to the study of Old and Middle English literature with attention to the development of genres and styles which shaped early English literary traditions. Prerequisites: three credits in 200 level English courses. Offered Annually.

ENG 362 Cr.3

English Renaissance

Study of the major writers of the sixteenth and seventeenth centuries in England. Emphasis on Spenser, Sidney, Jonson, Marlowe, Herrick, Herbert, Donne and others. Shakespeare's non-dramatic work also will be included in the study of this period. Prerequisites: three credits in 200 level English courses. Offered Every Third Semester.

ENG 363 Cr.3

Shakespeare I

Close study of several principal plays, chiefly from the early and middle parts of Shakespeare's career. Prerequisites: three credits in 200 level English courses. Offered Fall, Spring.

ENG 364 Cr.3

Shakespeare II

Close study of principal plays, chiefly plays coming after "Hamlet." Prerequisites: three credits in 200 level English courses. Offered Fall, Spring.

ENG 366 Cr.3

Restoration and 18th Century British Literature

Study of the principal works of the period 1660-1800, with emphasis on Dryden, Swift, Defoe, Pope, Fielding, Johnson, and Boswell. Prerequisites: three credits in 200 level English courses. Offered Every Third Semester.

ENG 367 Cr.3

19th Century British Literature

Study of the finest poetry, fiction, drama and essays of the Romantic and Victorian periods of British literature, 1798-1901, with attention to the social, philosophical, and literary movements that engendered them. Prerequisites: three credits in 200 level English courses. Offered Annually.

ENG 368 Cr.3

British Literature After 1900

A foundational course in the literature of the British Isles in the twentieth and twenty-first centuries. The course focuses on major British writers and literary developments, with emphasis on the ways this literature reflects changing British cultural identity and maintains continuity with the literary heritage out of which it develops. Prerequisites: three credits in 200 level English courses. Offered Annually.

ENG 370 Cr.3

Early American Literature

Study of selected authors and works by and about the geographical region of North America which becomes the United States and bordering countries. Development of a literary audience and tradition with roots in, but separating from, English literature. Emphasis upon literature written in English, with selected works from Native traditions and colonists other than English. Most readings pre-date the US Revolution. Prerequisites: three credits in 200 level English courses. Offered Fall.

ENG 371 Cr.3

Nineteenth Century American Literature

A foundational study of important writers, movements, and themes in 19th century American literature. American Romanticism, the cultural forces surrounding the Civil War era, industrialization, immigration, the rise of urban culture, expansion West, and other similar contexts may be developed to explore the literary styles and genres of the developing American literary sensibility. Prerequisites: three credits in 200 level English courses. Offered Spring.

ENG 372 Cr.3

American Literature After 1900

This course provides an introduction to some of the major 20th century writers and literary movements in the United States, in historical and cultural contexts. Historical currents and cultural movements will be primary emphases in text selection in order to familiarize students with literary developments such as Modernism and Post-modernism. Readings will be selected from major genres, including poetry, fiction, drama, and autobiography. Prerequisites: three credits in 200 level English courses. Offered Spring.

ENG 375 Cr.3

Writing Research

How do writers and researchers build knowledge in the field of writing and rhetoric studies? This course provides an overview of the research methods and genres used in writing and rhetoric studies, ranging from theoretical and historical approaches to qualitative and quantitative research designs. Methods such as ethnography, case study, discourse analysis, place-based research, and mixed methods will be discussed. Students will critique examples of published studies as they develop their own scholarly or creative projects, which will involve the identification of a research question or gap in the field, a review of the literature, a selection of appropriate methodologies, and preliminary research. By the end of the semester, students will complete a prospectus that they will develop in the English capstone course. Prerequisite: ENG 110 or ENG 112. Offered Fall, Spring.

ENG 380 Cr.3

Literature of American Ethnic and Minority Cultures

Study of selected works representative of American ethnic and minority cultures, including American Indian, Chicano, and Jewish. Emphasis will vary according to the interests of students and the instructor. For the current content, consult the instructor or the department chairperson. Prerequisites: three credits in 200 level English courses. Offered Occasionally.

ENG 382 Cr.3

Latino Literature in English

Study of representative works in original English or translation by writers of Mexican American, Cuban American, Puerto Rican, and other Latino or Latin American origins, emphasizing the aesthetic dimensions of this literature as well as its historical roots and contemporary cultural contexts. Prerequisites: three credits in 200 level English courses. Offered Occasionally.

ENG 385 Cr.3

Women Authors

This course examines how women's literature reflects the causes and nature of women's places in society and their creation of alternative visions and strategies, with a focus on women's negotiation of established traditions of authorship. Primary readings will span literary periods and genres. Authors may include Sappho, Marie de France, Katherine Phillips, Mary Astell, Mary Wollstonecraft, Mary Shelley, Charlotte Bronte, Phyllis Wheatley, Lillian Hellman, Djuna Barnes, George Eliot, Virginia Woolf, Angela Carter, Joyce Carol Oats, Toni Morrison, Zadie Smith. Prerequisites: three credits in 200 level English courses. Offered Every Third Semester.

ENG 387 Cr.3

Literature and Environmental Action

A study of literature of many genres written by nature and environmentalist writers, both traditional and contemporary, all serving as models for students' essays and projects. Prerequisite: three credits in 200 level English courses. Offered Alternate Years.

ENG 403 Cr.1-3

Individual Projects

Directed individual studies under the supervision of a department faculty member. Repeatable for credit - maximum three. Prerequisite: 12 credits and excellent grades in English courses. Consent of instructor. Offered Fall, Spring.

ENG 405 Cr.4

Teaching and Learning English in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in English. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school; candidates will learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 351; ENG 301. Offered Fall, Spring.

ENG 411 Cr.3

Capstone in English Education

The purpose of this capstone course is to engage with contemporary ELA research in order to ground our conversations about everyday teaching practices in wider theoretical frameworks. The course builds on prior coursework and a concurrent field experience to build connections between classroom practice and English education theories that support culturally, racially, and linguistically diverse learners. It is also designed to acquaint teacher candidates with the variety of English-related courses they might be called on to teach (speech, creative writing, journalism, etc.). Finally, this course supports students in completing the performance assessment portfolio required for certification. Prerequisite: concurrent enrollment in ENG 355 or ENG 455; admission to teacher education. Offered Spring.

ENG 412 Cr.3

Capstone in English for Medical Professions

This is a required course for English majors in the medical professions emphasis. Readings in the medical humanities with a capstone project and a concurrent internship/service learning experience are required. Projects are expected to build on topics from 300/400 level required or elective coursework in the major, including "Literature and Compassion," "Narrative Medicine and Bioethics," "The Story of Death and Dying," "Representations of Disability in Literature and Culture," and other related topics. Prerequisite: senior standing. Consent of department. Offered Spring.

ENG 413 Cr.3

Capstone Research Project

This course will give students an opportunity to conduct and present an intensive scholarly or creative project of their own design that engages with current conversations and trends in English studies. Students will develop their projects from previous coursework, workshop their projects throughout the semester, explore academic and non-academic venues for publishing and circulating their work, and/or ultimately present that work as part of a capstone research symposium. Prerequisite: ENG 375 (English: writing and rhetoric majors) or instructor consent (English: literature majors); senior standing. Offered Fall, Spring.

ENG 416 Cr.3

Seminar in Advanced Fiction Writing

The writing of fiction under the guidance of an experienced fiction writer. Classes will operate on the workshop model, with as many individual conferences between students and teacher as possible. The class will also include information about literary magazines, ideas about publishing, and visits from other fiction writers. Prerequisite: ENG 305. Offered Alternate Years.

ENG 417 Cr.3

The Writer's Studio

This course is an advanced seminar in creative writing taught by an experienced author. Emphasis on the creative process, from idea generation through composition, revision, and submission for literary publication. Readings in multiple creative genres, artistic processes, and professional development. Students will workshop original works in fiction, poetry, creative non-fiction, and/or scripts. When possible, students will meet published authors from local, regional, national or international writing communities. Prerequisite: ENG 305. Offered Alternate Years.

ENG 433 Cr.3

Introduction to Teaching Writing

Introduces students to histories, theories, and practices that will enable them to make effective choices as teachers of writing. Areas of study include a brief history of writing instruction in US schools, including an overview of influential theories; the development and implementation of writing assignments; and theories and best practices for responding to student writing. Students engage these issues both as writers and as future teachers. This specific preparation to teach writing builds on students' disciplinary knowledge and more general courses in education theory and practice. Prerequisite: at least two (2) English courses at the 300- or 400-level completed or concurrent enrollment. Offered Every Third Semester.

ENG 434 Cr.3

Chinese Discourse

This course compares and contrasts discourse in China to that in the West. It examines the culturally similar and crucially different ways of creating, elaborating, and presenting the writer's ideas. Introducing the students to a culture at once similar to and different from their own, the course activates the students' implicit knowledge of their own cultural/discursive heritages and supplements that knowledge when necessary. Readings for this class include ancient and modern Chinese philosophical essays, literary works, and writings on both Chinese calligraphy and paintings in relation to Chinese thinking. All texts used are in English. Prerequisite: three credits in 200 level English courses. Offered Alternate Years.

ENG 446 Cr.3

Forms of Fiction

An investigation of traditional and contemporary narrative forms and some problems involved in writing within them. Students will be invited to write fictions of various kinds and find solutions to specific writing problems. Each student will present a seminar paper on aspects of narrative form in the work of a representative writer. Prerequisite: ENG 305. Offered Alternate Years.

ENG 449 Cr.3

Form and Genre in Creative Writing

This course is an advanced study of traditional and contemporary concepts of form and genre in creative writing, led by a professor who is an experienced author and also an informed scholar of forms and genres. Areas explored include forms of fiction, non-fiction, poetry, and hybrid forms. Students will read and discuss challenging creative and critical texts, and write creative works and/or critical essays that reflect their new understandings of formal and generic concepts. Prerequisite: ENG 305. Offered Alternate Years.

ENG 450 Cr.2-6

English Internship

An internship of the English Department to offer its majors and minors opportunities to learn, on the job, how to apply language skills acquired from course work. Students can select jobs or field experiences related to writing and communication skills. These experiences could be with government agencies, business firms, and industry or community agencies locally or throughout the U.S. While many internships are remunerative, not all are necessarily so. Only jobs and experiences approved by an adviser in the English Department and the department chairperson are acceptable for credit. Students interning will be expected to make regular reports to their English adviser and to comply with any course arrangements that the adviser should deem suitable. Applies only to rhetoric/writing emphasis of the English major and to the professional writing minor. Repeatable for credit - maximum six. Prerequisite: junior standing; consent of adviser; a cumulative GPA of 2.50 required. Consent of instructor. Pass/Fail grading. Offered Fall, Spring.

ENG 451 Cr.1

Workshop in Curriculum & Assessment

This workshop provides an opportunity to discuss and further develop teacher candidates' critical thinking regarding issues of English Language Arts curriculum and assessment for grades 4-12. Students in this course develop their reflective teaching practice, focusing on techniques for differentiated instruction and assessment that promote inclusive learning environments. Prerequisite: concurrent enrollment in ENG 455; admission to teacher education. Consent of department. Offered Fall, Spring.

ENG 452 Cr.3

Professional and Technical Writing Practicum

This course is designed as a capstone practicum for the professional and technical writing minor. Students will participate in an internship (practicum) and in weekly online activities. In addition to offering professional, organizationally-situated workplace writing experience, this course will cover issues of professionalism in writing for an organization. Students will regularly report to a professional supervisor who will delegate work and conduct performance reviews. Students will discuss their experiences as they engage in reflective practice as professionals. The course will end with the completion of a web-based professional portfolio. Students are required to meet with a professional and technical writing advisor prior to applying for internship opportunities. Students will need to spend 7-10 hours a week on work for their internship (approximately 105-150 hours over the semester). Prerequisite: ENG 110 or ENG 112; junior standing. Consent of instructor. Offered Fall, Spring.

ENG 455 Cr.4

Field II Experience: Teaching and Learning English in the Secondary Classroom

This course focuses on critical pedagogical approaches to canonical literature in the high school English classroom. It is designed for teacher candidates who want to learn how to teach commonly-taught texts in ways that include the perspectives of women, people of color, and indigenous and/or linguistically diverse populations. Students will explore methods for teaching poetry, fiction, drama, non-fiction, and short stories by reading with and against commonly used sources. Students will learn how to weave multiple perspectives and voices into their unit planning through mindful text selection, discussion planning, technology integration, and assessment design. This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in English. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school; candidates will learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: ENG 355; concurrent enrollment in ENG 451; admission to the teacher education. Consent of department. Offered Fall, Spring.

ENG 462 Cr.3

Seminar in British Literature

A seminar in British literature which involves advanced study of major British authors, works, genres and sub-genres, techniques and styles. The seminar may explore a particular literary/aesthetic development or idea, trace its roots in the past and examine its relevance to the present. With a change in emphasis, the seminar may center on several major movements and representative authors across time studied in light of historical contexts and/or from the analytic and aesthetic perspectives provided by contemporary developments in literary and critical theory. Students in the seminar are expected to engage in independent reading and research. Repeatable for credit - maximum six. No more than three credits may be applied to an English major or minor. Prerequisite: three credits in 200 level English courses. Offered Occasionally.

ENG 470 Cr.3

Seminar in American Literature

A seminar in American literature, chosen from 17th century to the present, including American colonial culture and not strictly bounded by the borders of present-day United States; advanced study of author(s), works, genres and sub-genres, techniques and styles, theme or setting, and more. With change in emphasis and instructor, the seminar could present an historical development or an intense focus on a particular subject. Students are expected to engage in extensive independent reading and research, as well as presentation of research findings to class and moderating further discussion. Repeatable for credit - maximum six. No more than three credits may be applied to an English major or minor. Prerequisite: three credits in 200 level English courses. Offered Occasionally.

ENG 481 Cr.3

Seminar in Literature and Culture

Advanced study of literature within a focused cultural context. Emphases might include literatures of particular ethnic cultures; transnational or regional literatures; literatures of identity; and cultural studies approaches to other literary topics. Focus will vary with instructor. Repeatable for credit - maximum six. No more than three credits may be applied to an English major or minor. Prerequisite: three credits in a 200-level English literature course. Offered Occasionally.

ENG 497 Cr.3

Seminar in Writing and Rhetoric Studies

A seminar for advanced study in composition and rhetoric. Topics will vary according to the instructor. For the current content, consult instructor or department chair. Repeatable for credit - maximum six. No more than three credits may be applied to an English major or minor. Prerequisite: ENG 333; junior standing. Offered Fall, Spring.

English as a Second Language (ESL) - Courses

Courses

ESL 100 Cr.4

ESL Speaking

This course provides opportunities for students to practice speaking English in structured and semi-structured situations. Special attention is given to a limited set of functions (such as requesting, apologizing and complaining). Pronunciation work focuses on basic regularities of English pronunciation. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 101 Cr.4

ESL Reading

Focus is on comprehension of reading passages with time limits and with understanding of main and supporting ideas. Students increase their passive vocabularies through the study of word formation and by learning to use an English-English dictionary. Reading skills such as skimming, scanning, prediction, use of context clues and recognizing thought groups are also stressed. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 102 Cr.3

Written English Skills: Appreciating the Arts

Students practice the foundational skills of writing academic sentences and paragraphs through controlled and free writing about visual arts by local artists. Students also explore visual literacy and compare written organizational patterns across languages. Seven week course. Repeatable for credit - maximum six. Prerequisite: non-native speakers of English and appropriate score on ESL placement test. (Transcript credit only. Does not count toward graduation. Performance at the C-level is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 103 Cr.3

Oral English Skills: Talking about Health and Wellness

This course gives students practice understanding spoken English of varying lengths and complexity as they talk about teamwork, recreational activities, healthy eating, mental health, and the importance of these topics in U.S. society, especially on college campuses. Instruction focuses on understanding and engaging in natural, unplanned conversations, both formal and informal, to improve communication skills. Special attention is given to the pronunciation (phonology) of words and phrases in this region. Seven week course. Repeatable for credit - maximum six. Prerequisite: non-native speakers of English and appropriate score on ESL placement test. (Transcript credit only. Does not count toward graduation. Performance at the C-level is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 106 Cr.4

ESL Intensive Reading/Writing I

This course develops reading, writing, vocabulary and grammar skills. The course is intended for high beginner students in English and for students with basic abilities in reading and writing. Seven-week course. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 107 Cr.4

ESL Intensive Listening/Speaking I

This course develops listening, speaking, pronunciation and vocabulary acquisition for use in daily life and the classroom. The course is intended for high beginner students with basic communication abilities. Seven-week course. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 110 Cr.3

Oral English Skills: Telling your Story

Students develop speaking and intercultural communication skills for informal and formal settings. Telling their own story(ies) through the creation of a digital media project, students practice tailoring communication to particular audiences, standard forms of organization, and common transition signals used in oral communication. This course also introduces students to oral conversation strategies, such as circumlocution and pronunciation for understanding. Seven week course. Repeatable for credit - maximum six. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 100. (Transcript credit only. Does not count toward graduation. Performance at the C-level is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 111 Cr.4

Written English Skills: Reading the Region

Students in this course join a community of readers on campus and develop reading skills in meaningful ways by reading local/regional authors. Academic reading skills are the focus, including summarizing, paraphrasing, skimming, scanning, making inferences, and distinguishing between different purposes for reading. Students develop their ability to critically read academic and other texts. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 101. (Transcript credit only. Does not count toward graduation. Performance at the C-level is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 112 Cr.4

ESL Writing/Grammar

Focus is on improving students' ability to write convincing English paragraphs and essays with greater fluency. The basics of writing are reviewed. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 102. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 113 Cr.4

ESL Listening

This course introduces students to English used in an educational context. Emphasis is on note taking by listening to short lectures. Conversational English listening skills are also studied including topics such as guessing meaning from context, stressed words, and understanding fast English. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 103. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 116 Cr.4

ESL Intensive Reading/Writing II

This course develops reading, writing, vocabulary and grammar skills. The course is intended for intermediate level students with some ability in reading and writing but with limited vocabulary and range of expression. Seven-week course. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 106. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 117 Cr.4

ESL Intensive Listening/Speaking II

This course develops listening, speaking, pronunciation and vocabulary acquisition for use in common social situations and the classroom. The course is intended for intermediate level students with some communication ability but with limited vocabulary and range of expression. Seven-week course. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 107. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 150 Cr.3

Oral English Skills: Wisconsin and Its People

With a focus on developing academic oral language skills (listening and speaking), students learn about Indigenous peoples and historical and present-day migration to Wisconsin through authentic texts, such as the Hear, Here project in La Crosse. Students practice note taking skills and practice listening to lectures and conversational English, including skills such as guessing meaning from context, stressed words, and understanding fast English. Students practice speaking skills in whole-class and small group formats as they develop skills in managing their own learning. Students develop critical thinking skills around displacement and migration. Seven week course. Repeatable for credit - maximum six. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 110. (Transcript credit only. Does not count toward graduation. Performance at the C-level is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 151 Cr.4

Written English Skills: Technology and Social Media

In this course students engage in reading a variety of texts and text types, demonstrating reading strategies, and developing academic reading abilities. Students develop critical reading skills (i.e. drawing inferences, understanding author perspective, identifying bias). Students analyze a variety of social media and write response essays of varying lengths and genre. Language foci include understanding denotative and connotative meaning, recognizing the use of active vs. passive voice, and recognizing ambiguous language. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 111. (Transcript credit only. Does not count toward graduation. Performance at the C-level is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 152 Cr.3

Written English Skills: Communicating our Values

In this course students develop their ability to express themselves and their values through writing. Students are introduced to and employ the writing process (pre-writing, drafting, revision, peer-editing) as they practice a variety of written organizational patterns and master topic and concluding sentences. Students write increasingly complex sentence structures and extended discourse of several paragraphs. Special attention is paid to identifying and citing evidence to support claims in academic writing. Seven week course. Repeatable for credit - maximum six. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 112. (Transcript credit only. Does not count toward graduation. Performance at the C-level is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 153 Cr.4

U.S. Culture Today

This course gives students an understanding of the United States from practical and sociological perspectives. Reading, writing, listening, and speaking activities focus on information about daily life, values, beliefs, and social problems. Prerequisite: non-native speakers of English and/or appropriate score on ESL placement test and/or successful completion of ESL 113. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 155 Cr.1-16

Special Topics in ESL

These courses are designed for special or contract groups in need of intensive English for non-academic purposes. Listening, reading, speaking, writing and cultural activities will be stressed, according to group needs. Each program-design could be for 1-16 institute credits - according to contractual agreements and amount of intensive English required. Prerequisite: non-native speakers of English and/or appropriate score on ESL placement test. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 156 Cr.4

ESL Intensive Reading/Writing III

This course develops academic reading and writing skills of high-advanced level students. Seven-week course. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 116. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 157 Cr.4

ESL Intensive Listening/Speaking III

This course is designed to help students gain confidence in their listening and speaking skills in academic settings as well as in conversation. Focus will be on developing academic vocabulary, critical thinking skills and honing research and organization skills necessary for delivering formal presentations. Attention will be given to analyzing the audience and tailoring a speech for a specific purpose. In addition, this course highlights strategies for successful listening techniques such as predicting, evaluating information and recognizing organizational cues. Seven-week course. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 117. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 200 Cr.4

ESL Speaking/Listening

Emphasis is on the use of English in academic settings as well as in conversation. Course concentrates on lecture comprehension, with special attention to note taking, recognizing main ideas and support and determining the attitude of the speaker toward the subject. Students also work on comprehension of complex information presented in non-lecture format, as in the dynamics of small-group discussion. Pronunciation focuses on individual needs of students. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 150. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 201 Cr.4

ESL Reading

Emphasis is on reading for academic purposes. Students work on comprehension of academic reading selections, as well as challenging non-academic material. Students work on tone and distinguishing fact from opinion. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 151. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 202 Cr.3

Written English Skills: Research and Writing

In this course students engage in individual research on a topic of interest related to global/international business and develop the skills to write an academic research paper. Students utilize the writing process as they develop greater grammatical accuracy, expand their vocabulary, and improve their ability to write for particular audiences and purposes. Special attention is paid to selecting and paraphrasing sources. Seven week course. Repeatable for credit - maximum six. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 152. (Transcript credit only. Does not count toward graduation. Performance at the C-level is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 203 Cr.3

Oral English Skills: Talking about the Environment

This course is designed to prepare students for college-level lectures and discussions. Students improve strategies for effective note-taking, including listening for cause and effect, chronological order, and supporting examples, as they engage in academic lectures. Students also develop strategies to work more effectively in large and small groups in academic settings, such as understanding a speaker's point of view, working cooperatively, and asking for clarification and additional information. The theme is the environment, conservation, and sustainability. Seven week course. Repeatable for credit - maximum six. Prerequisites: non-native speakers of English and appropriate score on ESL placement test, and/or successful completion of ESL 153. (Transcript credit only. Does not count toward graduation. Performance at the C-level is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 206 Cr.4

ESL Intensive Reading/Writing IV

This course develops academic reading, writing, and research skills of advanced students who are interested in undergraduate or graduate programs in the United States or other English-speaking countries. Seven-week course. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 156. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 207 Cr.4

ESL Intensive Listening/Speaking IV

This course develops academic listening and speaking skills for advanced level students who are interested in undergraduate or graduate study in the United States or other English-speaking countries. Seven-week course. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 157. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

ESL 226 Cr.4

ESL Intensive English for a Successful University Experience

This course prepares students for a successful university experience. Focus will be on writing summaries, critiques, and synthesis; study skills, group work, testing taking strategies, research writing, university culture/expectations. Seven-week course. Repeatable for credit - maximum eight. Prerequisite: non-native speakers of English and appropriate score on ESL placement test and/or successful completion of ESL 206. (Transcript credit only. Does not count toward graduation. Performance at 80% is required for a grade of pass.) Pass/Fail grading. Offered Fall, Spring, Summer.

+ESL 250 Cr.4

Oral English Skills: Issues and Controversies in the U.S.

Students in this class develop language strategies and techniques for success in academic classes, including the formal and informal discourse patterns needed for academic work. Students learn about local and state politics and explore how policies relate to social justice goals, while also exploring notions of advocacy and how their own actions make a difference. Special focus will be on developing confidence to speak up in academic settings. Finally, students identify bias in speaking and use vocabulary, structures, and discourse patterns appropriate for persuasive speaking. Prerequisite: non-native speakers of English and/or appropriate score on ESL placement test and/or successful completion of Level 2 of the ESL Institute Program. Offered Fall, Spring, Summer.

+ESL 251 Cr.3

Written English Skills: Reading about Data

The focus of this course is on reading data and statistics in academic writing. Students identify a topic of interest then critically evaluate and select research articles related to the topic. Students use effective academic reading skills (previewing, predicting, identifying organizational patterns, detecting unstated assumptions) and strategies (scanning, skimming, using headings, guessing meaning from context) to read the selected research articles, paying particular attention to the methodology, data collection, data analysis, and findings sections. Students write summaries of what they learn from each article and develop the skills to look at their own and others' writing critically. Seven week course. Prerequisite: non-native speakers of English and/or appropriate score on ESL placement test and/or successful completion of Level 2 of the ESL Institute Program. Offered Spring.

+ESL 252 Cr.4

Written English Skills: Researching Your Community

This course is designed to prepare students for college-level reading and writing through an individual research project. Students review the process of research (gathering materials, selecting sources, and arranging information) and practice the kind of writing that they are likely to encounter throughout their college career (summarizing, paraphrasing, critiquing, and synthesizing) as they research a personally-meaningful aspect of their new community. Special attention is placed on synthesizing and citing academic sources as students draft, revise, and proofread their research papers. Prerequisite: non-native speakers of English and/or appropriate score on ESL placement test and/or successful completion of Level 2 of the ESL Institute Program. Offered Fall, Spring, Summer.

+ESL 253 Cr.3

Oral English Skills: The Culture of Food

Through a focus on food, especially as seen through the medium of American movies and reality television shows, students develop oral language skills (listening and speaking) along with cultural understanding. Students master listening skills (such as listening for the main idea and guessing vocabulary from context) and, through reading about dominant cultural values and seeing them played out in media, develop culturally-appropriate speaking skills for a variety of purposes. Seven week course. Prerequisite: non-native speakers of English and/or appropriate score on ESL placement test and/or successful completion of Level 2 of the ESL Institute Program. Offered Fall, Spring, Summer.

ESL 255 Cr.1-16

Special Topics in ESL

Focus for these content-based courses in ESL is on strategies and techniques for success in academic classes, including vocabulary development, lecture comprehension, textbook reading, note and test-taking. Topics may vary by semester and may be offered as adjunct courses to those in the regular university curriculum. Repeatable for credit - maximum 16. Prerequisite: non-native speakers of English and/or appropriate score on ESL placement test. Offered Fall, Spring, Summer.

Environmental Studies (ENV) - Courses

Courses

+ENV 101 Cr.3

Introduction to Environmental Studies

This interdisciplinary, introductory seminar explores current environmental issues from a variety of perspectives (historical, social, and scientific) and disciplines (humanities, social sciences, and natural sciences). Attitudes toward the natural world and approaches to public and private decision-making are examined in terms of environmental justice issues. Field trips are taken to examine local and regional practices and issues. Offered Fall, Spring.

ENV 301 Cr.3

Environmental Sustainability

What can we do as individuals and as a society to meet our own needs without harming future generations? This seminar course approaches sustainability as a way of asking better questions, drawing from many academic disciplines and practical experiences. Students will discuss environmental sustainability for multiple scales, including personal lifestyles, organizations, businesses, and public infrastructure systems. Prerequisite: ENV 101 or ENV 201. Offered Fall, Spring.

ENV 303 Cr.3

Topics in Environmental Studies

This fully interdisciplinary seminar provides the opportunity to explore how scientific, historical, political, and ethical issues are interrelated in a specific environmental topic. Complexity of social-ecological systems is inherent in each pressing environmental issue. Course topics could include food, bicycle politics, environmental activism, and forest management. Repeatable for credit - maximum six. Prerequisite: ENV 101 or ENV 201. Offered Fall, Spring.

ENV 304 Cr.3

Topics in Environmental Justice

Environmental inequalities for poor and minority populations are increasingly recognized by media, environmental leaders, and organizations around the world. As we study relationships between humans and the environment, we highlight attempts to rectify these uneven circumstances. Themes of the topic courses could include food justice, conservation and access to natural areas, dynamics within environmental organizations, history of the environmental justice movement, and sustainability. Repeatable for credit - maximum six. Prerequisite: ENV 101 or ENV 201. Offered Annually.

ENV 450 Cr.1-3

Internship in Environmental Studies

Direct work experience with an agency or organization that deals with environmental issues or problems from an interdisciplinary perspective. The student works under supervision of both faculty adviser and agency staff member. Examples of sites include governmental agencies, advocacy groups, environmental education centers, alternative technologies companies, and environmental compliance divisions of corporations. All internships must be approved in the semester prior to the semester that the internship occurs. Repeatable for credit - maximum three. Prerequisite: ENV 201; declared environmental studies minor. Consent of internship coordinator. Consent of instructor. Offered Fall, Spring, Summer.

ENV 496 Cr.3

Environmental Studies Capstone

As a culmination of the environmental studies minor, this course has two main purposes. The first is to take action locally on an environmental service learning project. Action in the community builds professional skills, offers networking, and solidifies student interests. The second purpose is to help students clarify personal and career goals that are based on their environmental philosophy. Hearing from recent graduates and professionals in environmental fields provides students with a wide variety of perspectives and ideas as they consider their future decisions. Prerequisite: ENV 303; ENV 301 or ENV 304 or SOC 328 or SOC 332; six credits from the natural sciences electives, social sciences electives, or arts and humanities electives. Offered Fall, Spring.

ENV 499 Cr.1-3

Independent Study in Environmental Studies

Under supervision of instructor, individualized study in environmental studies on issues/topics not available in existing courses. All independent studies must be approved in the semester prior to the semester that the independent study occurs. Repeatable for credit - maximum three. Prerequisite: ENV 101 or ENV 201; declared environmental studies minor. Consent of environmental studies director. Consent of department. Offered Fall, Winter, Spring, Summer.

Ethnic and Racial Studies (ERS) - Courses

Courses

+ERS 100 Cr.3

Introduction to Ethnic and Racial Studies

An examination of the persistence of minority and ethnic problems in the United States and consideration of the contributions, parallels, similarities, and differences between and among ethnic and minority groups. Offered Fall, Winter, Spring, Summer.

+ERS/ENG 215 Cr.3

African American Authors

A study of the principal post-depression (1940 to present) African American authors, critics, and scholars which clarifies the relationship between these writers and the general field of American literature and which illustrates their unique contributions as representatives of African American culture. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. (Cross-listed with ENG/ERS; may only earn credit in one department.) Offered Fall, Spring.

ERS 490 Cr.3

Ethnic and Racial Studies Seminar

This capstone course is designed as a culminating experience for students completing a minor in Ethnic and Racial Studies. Current events will be examined and connections to careers will be explored as the active application of an ERS minor is made the central focus for the course. Students will draw upon the skills and knowledge of both their ERS minor as well as their own majors and other programs of study to design and carry out a capstone project that will address and/or analyze some aspect of ethnic and racial experiences in the United States. Note: Students are not allowed to substitute an independent study for this course. Prerequisite: ERS 100; 12 credits from core and elective courses; declared ethnic and racial studies minor. Offered Spring.

Exercise and Sport Science (ESS) - Courses

Courses

ESS 100 Cr.1

Physical Activities

A program of instruction to enhance participation in physical activities throughout one's lifetime. The primary emphases for specific activities may include acquiring a knowledge base, learning new skills and/or refining skills, developing components of health-related fitness, enhancing affective skills. Repeatable for credit. Pass/Fail grading. Offered Fall, Spring.

+ESS 104 Cr.2

Dance Appreciation

This course attempts to develop an awareness and appreciation of the role of dance in human society through the study of its purposes, functions and various forms. Offered Fall, Spring.

ESS 110 Cr.2

Introduction to Sport Management

This course exposes students to the profession of sport management. The course provides a broad overview of the sport industry, covers fundamental knowledge and skill sets of the sport manager, and provides students with information on specific sport industry segments for potential employment and career choices. Offered Fall, Spring.

ESS 113 Cr.1

Basic Swimming

This course is open to exercise and sport science majors and minors only. Emphasis is placed on the improvement of the individual student's swimming skill. Course content ranges from the non-swimmer level through American Red Cross intermediate skill level. Physical education teaching majors and minors are required to enroll in ESS 113 unless they hold one of the following American Red Cross certifications: Water Safety Instructor or Lifeguard Training. Offered Occasionally.

ESS 115 Cr.2

Orientation to Exercise and Sport Science

This course is designed to introduce the exercise and sport science major, to introduce the profession of exercise and sport science, and to give insight into the many diverse careers that can result from studying the discipline. Background knowledge of the foundations of the profession and the selection of a career path that reflects personal interests and abilities will be the focus. Offered Fall, Spring.

ESS 116 Cr.2

Water Safety Instruction

This course is designed to cover the basic components for certification by the American Red Cross (ARC) or YSL (YMCA Youth Swim Lessons) including infant and preschool, Longfellow's Whale Tales (ARC), progressive instruction, safety training for swim coaches and basic and emergency water safety. Upon successful completion of this course the student will be certified to instruct aquatics by the American Red Cross or YSL. Offered Fall, Spring.

ESS 118 Cr.2

Foundations of Physical and School Health Education

This course introduces foundational concepts of physical and school health education, including national standards and models for implementation. Students will recognize the roles and responsibilities of physical and health educators in K-12 schools. Offered Fall, Spring.

ESS 121 Cr.2

Teaching Adventure Education in Physical Education

This content course is focused on movement skills and knowledge for students in grades K-12 within activity categories aligned to Society of Health and Physical Education (SHAPE) National Standards and Grade Level Outcomes for K-12 Physical Education. Teacher candidates will develop common and specialized content knowledge related to adventure education and will have opportunities to plan and teach peers and K-12 learners. In addition, teacher candidates will recognize and understand academic language and theory related to teaching and learning adventure education. Offered Fall, Spring.

ESS 130 Cr.1

Officiating Athletics

Provides a general background of the rules, interpretations and mechanics of officiating athletic events at various levels of competition. Knowledge in this area may lead to WIAA certification in the following sports: basketball, baseball, football, gymnastics, swimming, track and field, volleyball, and wrestling. Repeatable for credit - maximum eight. Lab 2. Offered Occasionally.

ESS 145 Cr.2

Sport Management and Communication

This course will cover fundamental knowledge of sport-related communication, including sport information as found in print and electronic media, personal communication, and social media. Sport management trends and issues include media, legal and sociological issues, crisis management, and employment options in sport communication. Offered Fall, Spring.

ESS 200 Cr.2

Introduction to Teaching Methods in Physical and School Health Education

This is an introductory course in the methodology of teaching in physical and health education. This course focuses on the methods of planning instruction for student learning, including alignment of objectives, assessment, and tasks. Utilizing the Society of Health and Physical Education (SHAPE) National Health Education and Physical Education Standards and Grade Level Outcomes, teacher candidates will begin creating developmentally appropriate lesson plans. Interstate and Teacher Assessment and Support Consortium (InTASC) Standards and Appropriate Instructional Practice Guidelines are introduced. Prerequisite: ESS 118. Offered Fall, Spring.

ESS 201 Cr.1

Safety, First Aid and CPR

Instruction and practice in proper first aid principles, procedures and emergency care including CPR training. American National Red Cross Standard First Aid certification and CPR certification will be awarded to those students who meet certification requirements. One lecture/lab for seven weeks. Offered Fall, Spring.

ESS 205 Cr.3

Human Anatomy and Physiology for Exercise Science I

This course is designed to cover the structure and function of the cellular, histological, muscular, nervous, skeletal systems, as well as the brain and spinal cord. Emphasis will be placed on the musculoskeletal system during the laboratory component. Lect. 2, Lab 2. Prerequisite: BIO 100 or BIO 105 or MIC 100. (Not open for credit to students who have credit in BIO 312.) Offered Fall, Spring.

ESS 206 Cr.3

Human Anatomy and Physiology for Exercise Science II

This course is designed to cover the maintenance of homeostasis through study of the structure and function of the autonomic nervous system, cardiovascular, respiratory, immune, digestive, endocrine, and renal systems. Metabolism will also be discussed. It will also cover metabolism and fluid/electrolyte balance. Prerequisite: ESS 205. (Not open for credit for students who have had BIO 313.) Offered Fall, Spring.

ESS 207 Cr.3

Human Motor Behavior

This course is an investigation into the nature of human motor development, motor control, and motor learning. Topics will be approached from a constraints perspective, focusing on the interaction among the individual, the environment, and the task. Lect. 2, Lab 2. Offered Fall, Spring.

ESS 209 Cr.2

Strength Training Clinical I

A course designed to provide practical experience in the supervision of a strength center. Students will have the opportunity to instruct proper lifting technique, assist with the assessment of strength, power and speed, and learn facility and equipment maintenance. Lab 4. Prerequisite: ESS 205 or ESS 206 or concurrent enrollment; admission to strength and conditioning concentration. Pass/Fail grading. Offered Fall, Spring.

ESS 212 Cr.3

Teaching Fundamental Movement Skills in Physical Education

This is a content course focused on the development of fundamental movement skills and knowledge for students in grades K-5 that are aligned to Society of Health and Physical Education (SHAPE) National Standards and Grade Level Outcomes for K-12 Physical Education. Teacher candidates will develop common and specialized content knowledge related to the development of fundamental movement skills, movement concepts, and gymnastics. In addition, teacher candidates will recognize and understand academic language and theory related to teaching and learning fundamental movements, educational games, and dance. Students will have opportunities to plan, observe, and teach peers and K-12 learners. Lect. 2, Lab 2. Prerequisite: ESS 118 or concurrent enrollment. Offered Fall, Spring.

ESS 230 Cr.3

Functional Health Knowledge for School Health Education

Students will learn aspects of the functional health knowledge required to teach skills-based school health education to K-12 students. Functional health knowledge includes the core concepts (National Health Education Standard 1) in health: nutrition/healthy eating, mental and emotional health, alcohol and other drugs, tobacco, violence, safety/injury prevention, personal wellness, and sexual health. Prerequisite: ESS 118. Offered Fall, Spring.

ESS 231 Cr.3

Introduction to Teaching Adapted Physical Education

This is a pedagogy designed to introduce teacher candidates to the process of teaching physical education to K-12 students with disabilities. Course content includes: (1) federal and state laws pertaining to the education of K-12 students with disabilities; (2) special education service delivery process, including referral and placement of students in the least restrictive environment; (3) appropriate physical education teaching methods for students with disabilities to use in the K-12 instructional setting; (4) causes and characteristics of selected disabilities and how these disabilities impact a person's movement and learning potential; and (5) adapted teaching techniques and equipment for motor development, physical fitness, sport skills, and aquatics. In addition, all students are required to participate in the UW-La Crosse Motor Development Program. Lect. 2, Lab 2. Prerequisite: ESS 118 or concurrent enrollment. Offered Fall, Spring.

ESS 232 Cr.2

Adapted Lifetime Recreation and Sport

This course includes teaching within an adapted aquatics program and adapted sports league. This course focuses on how physical activities are beneficial and can be used as a lifetime recreation activity for persons with disabilities. Teacher candidates will learn how to create, implement, and apply teaching strategies in the K-12 adapted aquatics setting. Teacher candidates will also offer assistance during the adapted sports league (ASL) in local schools and identify additional lifetime recreation opportunities within the community for persons with disabilities. Lect. 1, Lab 2. Prerequisite: ESS 231. Offered Fall, Spring.

ESS 233 Cr.2

Teaching Methods in Adapted Aquatics

This course focuses on strategies and techniques for teaching aquatic skills to persons with disabilities including those with moderate to severe conditions. Developmental progressions and instructional strategies for aquatic skills are presented. Modified and adapted equipment will be introduced for instructional purposes. A range of content from basic water adjustment skills through the use of aquatics for fitness and lifetime physical activity will be covered. Lect. 1, Lab 3. Prerequisite: ESS 231. Offered Fall.

ESS 261 Cr.2

Teaching Educational Gymnastics in Physical Education

A content course focused on movement skills and knowledge for students in grades PK-6 within activity categories aligned to National Standards and Grade Level Outcomes for K-12 Physical Education. Teacher candidates will develop common and specialized content knowledge related to educational gymnastics; will have opportunities to plan and teach; will learn about physical activity and fitness knowledge related to educational gymnastics. In addition, teacher candidates will recognize and understand academic language and theory related to teaching and learning educational gymnastics. Lect. 1, Lab 1. Prerequisite: ESS 200. Offered Fall, Spring.

ESS 281 Cr.2

Prevention and Care of Athletic Injuries

This course gives students who are interested in inter-scholastic athletics part of the necessary background to become a qualified coach or director. This course includes common injuries occurring as a result of participating in athletics and physical education activities; procedures and techniques in the prevention and care of injuries; and the understanding of the coaches' and teachers' roles in the care of injuries. Prerequisite: ESS 201; and ESS 205 or BIO 312. Offered Fall, Spring.

ESS 300 Cr.2

Assessment in Physical and School Health Education

This is an introductory course in the methodology of teaching effectiveness in physical and school health education through a socialization lens. This course focuses on the intentional alignment of assessment in the teaching-learning process (planning, instruction, assessment). This course will utilize the Society of Health and Physical Education (SHAPE) National Physical and Health Education Standards and Grade Level Outcomes. Teacher candidates will begin creating developmentally appropriate assessments in alignment within lesson plans, while also comprehending and implementing assessments in a variety of ways. In addition, terminology such as formative, summative, informal, formal, assessment for learning, assessment of learning, traditional assessments, performance-based assessments, rubrics, and grading practices will be analyzed and discussed. Interstate and Teacher Assessment and Support Consortium (InTASC) Standards and Appropriate Instructional Practice Guidelines are introduced. Prerequisite: admission to physical, adapted, and school health education. Offered Fall, Spring.

ESS 302 Cr.3

Physiology of Exercise

Applied physiology: a study of how normal physiological function (homeostasis) is altered, and subsequently restored, in response to various forms of stress (exercise and training). Lect. 2, Lab 2. Prerequisite: grade of "C" or better in ESS 206 or BIO 313. Offered Fall, Spring.

ESS 303 Cr.3

Biomechanics

Biomechanics emphasizes the investigation and application of mechanical principles to the study of human motion and the motion of sport objects. Students will learn systematic approaches for the qualitative and quantitative analysis of the human body as it engages in motor activities. Lect. 2, Lab 2. Prerequisite: grade of "C" or better in ESS 205 or BIO 312. Recommended: MTH 150, MTH 151, or MTH 207. Offered Fall, Spring.

ESS 304 Cr.2

Biomechanical Principles of Human Movement Assessment and Analysis for Educators

This course emphasizes the investigation and application of anatomical structure and mechanical principles to the study of human movement and the motion of sport objects. Students will learn systematic approaches for the qualitative analysis of the human body as it engages in motor activities. Prerequisite: ESS 200; grade of "C" or better in ESS 205 or BIO 312. Offered Fall, Spring.

ESS 309 Cr.2

Strength & Conditioning Methods

This course exposes students to theory, applications, and methods pertinent to the field of strength and conditioning. Students will attain competency in various psychomotor skills and the ability to incorporate viable feedback for instructing skills and techniques. Topics include instructional progressions for movement preparation; resistance exercise techniques; strength, power and speed development; and the integration of all training variables toward improving movement efficiency. Students will assist with the implementation of strength and conditioning programs. Lect. 1, Lab 2. Prerequisite: ESS 368. Pass/Fail grading. Offered Fall, Spring.

ESS 310 Cr.2

Teaching Outdoor Pursuits in Physical Education

This is a content course focused on how to implement outdoor pursuits for students in grades K-12 aligned to Society of Health and Physical Education (SHAPE) National Standards and Grade Level Outcomes for K-12 Physical Education. Teacher candidates will develop common and specialized content knowledge related to outdoor pursuits, will have opportunities to plan and teach, and will learn about physical activity and fitness knowledge specific to each activity category. In addition, teacher candidates will recognize and understand academic language and theory related to teaching and learning a variety of outdoor pursuits which may include, but not limited to, recreational boating (kayaking, canoeing, sailing, rowing), hiking, backpacking, fishing, orienteering/geocaching, ice skating, skateboarding, snow skiing, snowboarding, snowshoeing, bouldering/traversing/climbing, mountain biking, adventure activities, and ropes courses. Lect. 1, Lab 3. Prerequisite: admission to physical, adapted, and school health education. Offered Fall, Spring.

ESS 320 Cr.3

Field Experience in Sport Management

Practical experience in a sport management setting. Experiences provided may include: sport event facilitation, budget preparation and monitoring, preparing contracts, checking eligibility, and marketing and promotion. Repeatable for credit - maximum six. Prerequisite: admission into exercise sports science - sport management emphasis. Offered Fall, Winter, Spring, Summer.

ESS 323 Cr.3

Nutrition and Sport

Basic principles of human nutrition and nutritional needs for athletes and/or active populations. Issues discussed include ergogenic aids, carbohydrate loading/manipulation, eating disorders, and protein supplementation. Practical application will include dietary analysis and composition for people in various activities and conditions. Prerequisite: ESS 302 or NUT 200. Offered Fall, Spring.

ESS 324 Cr.1-3

Independent Study in Exercise and Sport Science

Provides students with supervised study in a specific area of interest in their exercise and sport science academic program. Repeatable for credit - maximum nine credits or three courses. Consent of department. Offered Fall, Winter, Spring, Summer.

ESS 328 Cr.3

Field Experience in Exercise Science

Practical experience in an exercise science setting or formal observation in a clinical setting. Experiences provided may include activities such as exercise leadership, coaching, assisting with fitness assessment and exercise prescription, exercise research, clinical observation, etc. Repeatable for credit - maximum six. Prerequisite: admission to the exercise sport science major - fitness or pre-professional emphasis. Offered Fall, Winter, Spring, Summer.

ESS 330 Cr.2

Skill Development in School Health Education

This course will more formally introduce the skill development model for skills-based health education. Students will explore the steps of the model and how they apply to the different Society of Health and Physical Education (SHAPE) National Health Education Standards in teaching/developing health-literate individuals. Students will use the skill development model to design and implement lessons that connect skills to core concepts/functional health knowledge. This course also includes an introductory teaching lab experience with K-12 learners. Lect. 1, Lab 2. Prerequisite: ESS 230; ESS 361 or ESS 362 taken concurrently; admission to physical, adapted, and school health education. Offered Fall, Spring.

ESS 331 Cr.2

Disability and Physical Activity Implications

This course covers the causes, characteristics, incidences, and impacts of physical, sensory, emotional/behavioral, intellectual, and other developmental disabilities. Content includes a wide variety of low and high incidence disabilities (mild through severe/profound levels for each) and the implications for physical education instruction in K-12 educational settings. Emphasis is on movement and motor development implications, adaptations, and instructional strategies to enhance physical activity and gross motor skills of individuals with disabilities, ages 3 through adulthood. Prerequisite: ESS 231 or RTH 329. Offered Fall.

ESS 344 Cr.3

Introduction to Fitness Assessment

The purpose of this course is to review the clinical and diagnostic approach to cardiovascular anatomy, physiology and pathophysiology, and to provide basic knowledge in evaluation, methodology and interpretation of fitness testing. Areas of emphasis will be population characteristics, participant screening and referral process, alternatives of fitness assessment and exercise prescription. Lect. 2, Lab 2. Prerequisite: ESS 302; admission to exercise sports science - fitness emphasis. Offered Fall, Spring.

ESS 348 Cr.2

Theory of Coaching

Theory of coaching specific competitive sports. Coaching and directing youth, club, inter-scholastic and intercollegiate sports programs. Theory of coaching the following sports will be offered on a rotational basis: baseball/softball, basketball, football, gymnastics, soccer, swimming and diving, tennis, track and field/cross country, volleyball, and wrestling. A competitive background in and fundamental knowledge of the sport is highly recommended. Repeatable for credit - maximum four. Prerequisite: junior standing. Offered Fall, Spring.

ESS 349 Cr.2

Psychology of Coaching Competitive Athletics

Aids the prospective coach to better understand the application of psychological concepts to the coaching of sports. Emphasis will be on the methods of improving the performance of athletes through a better understanding of the factors affecting teaching and learning in athletics. Prerequisite: junior standing. Offered Fall, Spring.

ESS 355 Cr.3

Methods of Exercise Leadership

This course will cover the methodology of developing, teaching and leading sound exercise workouts for all levels of physiological fitness and for individual needs. Lect. 2, Lab 2. Prerequisite: ESS 302, ESS 303; admission to exercise sports science - fitness emphasis. Offered Fall, Spring.

ESS 361 Cr.1

Physical Education, School Health Education, and Physical Activity Lab I

This introductory teaching methods course provides the opportunity to construct and implement developmentally appropriate lessons based on Society of Health and Physical Education (SHAPE) National Health and Physical Education Standards and Grade Level Outcomes. This course will focus on learning and implementing classroom management strategies and reflecting on planning and teaching practices within a professional learning community. During this course students will be teaching a variety of ages (4-18) within the La Crosse Area Physical Education, School Health Education, and Physical Activity Program. Lab 3. Prerequisite: ESS 366 taken concurrently; admission to physical, adapted, and school health education. Offered Fall.

ESS 362 Cr.1

Physical Education, School Health Education, and Physical Activity Lab II

This introductory teaching methods course extends the opportunity for students to construct and implement developmentally appropriate lessons based on Society of Health and Physical Education (SHAPE) National Standards and Grade Level Outcomes for K-12 Physical Education. Students will continue to refine the implementation of classroom management strategies and their ability to reflect on planning and teaching practices within a professional learning community. During this course students will be teaching a variety of ages (4-18) within the La Crosse Area Physical Education, School Health Education, and Physical Activity Program. Lab 3. Prerequisite: ESS 367 taken concurrently; admission to physical, adapted, and school health education. Offered Spring.

ESS 363 Cr.2

Teaching Dance in Physical Education

This content course is focused on movement skills and knowledge for students in grades 3-12 within activity categories aligned to Society of Health and Physical Education (SHAPE) National Standards and Grade Level Outcomes for K-12 Physical Education. Teacher candidates will develop common and specialized content knowledge related to teaching dance and rhythmic activities, will have opportunities to plan and teach peers and K-12 learners, and will learn about physical activity and fitness knowledge specific to each activity category. In addition, teacher candidates will recognize and understand academic language and theory related to teaching and learning a variety of dance and rhythmic activities which may include, but not limited to, dance forms such as creative movement, line, ballet, modern, literature and movement, sport, hip hop, Latin, ballroom, square, stepping, folk/cultural dance, and social. Lect. 1, Lab 2. Prerequisite: admission to physical, adapted, and school health education. Offered Fall, Spring.

ESS 364 Cr.2

Teaching Fitness and Wellness in Physical Education

This content course is focused on movement skills and knowledge for students in grades K-12 aligned to Society of Health and Physical Education (SHAPE) National Standards and Grade Level Outcomes for K-12 Physical Education. Teacher candidates will develop common and specialized content knowledge related to fitness, wellness, and physical activity. Students will have opportunities to plan and teach peers and K-12 learners, will learn about physical activity and fitness knowledge specific to improving or maintaining fitness and wellness. In addition, teacher candidates will recognize and understand academic language and theory related to teaching and learning fitness activities including, but not limited to, yoga, Pilates, resistance training, spinning, running, fitness walking, fitness swimming, kickboxing, cardio-kick, Zumba, and exergaming. Lect. 1, Lab 2. Prerequisite: admission to physical, adapted, and school health education. Offered Fall, Spring.

ESS 366 Cr.2

Teaching Target, Net and Wall Activities in Physical Education

This content course is focused on movement skills and knowledge for students in grades 3-12 within activity categories aligned to Society of Health and Physical Education (SHAPE) National Standards and Grade Level Outcomes for K-12 Physical Education. Teacher candidates will develop common and specialized content knowledge related to target and net/wall activity categories, will have opportunities to plan and peer teach, and will learn about physical activity and fitness knowledge specific to each activity category. In addition, teacher candidates will recognize and understand academic language and theory related to teaching and learning target and net/wall activity categories. Lect. 1, Lab 2. Prerequisite: ESS 361 taken concurrently; admission to physical, adapted, and school health education. Offered Fall.

ESS 367 Cr.2

Teaching Invasion and Striking and Fielding Activities in Physical Education

This content course is focused on movement skills and knowledge for students in grades 3-12 within activity categories aligned to Society of Health and Physical Education (SHAPE) National Standards and Grade Level Outcomes for K-12 Physical Education. Teacher candidates will develop common and specialized content knowledge related to invasion, striking and fielding activities, will have opportunities to plan and peer teach, and will learn about physical activity and fitness knowledge specific to each activity category. In addition, teacher candidates will recognize and understand academic language and theory related to teaching and learning invasion and striking and fielding activity categories. Lect. 1, Lab 2. Prerequisite: ESS 362 taken concurrently; admission to physical, adapted, and school health education. Offered Spring.

ESS 368 Cr.3

Strength Training Techniques and Programs

This course is designed to provide the student with a working knowledge of proper lifting and spotting technique, an understanding of the various types of equipment and modes of strength training, basic program design and programming for special populations, and the strategies for instructing resistance exercise techniques. Students will also be taught how to design, and individualize, a strength training program. Lect. 2, Lab 2. Prerequisite: ESS 205 and ESS 206, or BIO 312 and BIO 313. ESS 100 - Strength Training recommended. Offered Fall, Spring.

ESS 373 Cr.3

Media and Public Relations in Sport Management

This course is designed to acquaint students with media and public relations practices that are incorporated in sport management. Included in the class are the responsibilities and issues that sport managers face on a daily basis such as PR management, crisis management, interviews and media conferences, legal and ethical dilemmas, and the production of sport media relations tools. The course emphasizes practical application of sport media and PR. Prerequisite: admission to exercise sports science plan - sport management emphasis. Offered Fall, Spring.

ESS 383 Cr.3

Clinical Pathology for Exercise Science

This course is designed to introduce students to the pathology of injuries and illnesses of the body systems and treated by allied health professionals. Topics included are categorized into physiological responses to trauma, disease, inflammatory responses and autoimmune/immunodeficiency responses to various diseases/syndromes/conditions. Prerequisite: admission to athletic training major or ESS-exercise science emphasis. Offered Fall, Spring, Summer.

ESS 386 Cr.2

Athletic Training Clinical III

A course designed to provide clinical experience in an athletic training setting. Students will have an opportunity to gain competency in lower extremity evaluation skills, and management of pathologies of the lower extremity that are common in athletics. This course is designed to have students demonstrate mastery of a variety of athletic training clinical proficiencies and clinical integration proficiencies. Prerequisite: ESS 287. Offered Fall.

ESS 387 Cr.2

Athletic Training Clinical IV

A course designed to provide clinical experience in an athletic training setting. Students will have an opportunity to gain competency in utilization of therapeutic interventions for the management of pathologies that are common in physical activity and healthcare setting. This course is designed to have students demonstrate mastery of a variety of athletic training clinical proficiencies and clinical integration proficiencies. Prerequisite: ESS 386. Offered Spring.

ESS 403 Cr.2

Advanced Strength Training Applications and Techniques

This course presents advanced strength training and conditioning theory and practice. Designed primarily for students specializing in strength and conditioning, the course explores advanced periodization models and their utilization, mastery and analysis of Olympic lifts, plyometric programming, ergogenic aids (identification, legal implications, nutritional alternatives,) facility design, and special population needs. Prerequisite: ESS 302, ESS 303, ESS 368. Offered Fall, Spring.

ESS 407 Cr.3

Sport Management and Society

This course is designed to provide the foundation for an understanding of the ethical, social, cultural, and psychological aspects for the operation of programs in athletics, sports, physical education and fitness. The student will be able to identify current social, cultural, and ethical issues and problems and the potential solutions to these problems. Prerequisite: admission to exercise sports science - sport management emphasis; junior standing. Offered Fall, Spring.

ESS 409 Cr.2

Strength Training Clinical III

A course designed to provide practical experience in management of a strength center. Students will have the opportunity to instruct proper lifting technique, assess strength, power and speed, maintain the strength facility, design lifting and conditioning programs, and assist with the supervision and instruction of junior staff members. Lab 4. Prerequisite: ESS 302, ESS 303, ESS 309, ESS 368. Offered Fall, Spring.

ESS 410 Cr.2

Legal Implications of Sport and Activity

This course addresses the legal aspects for the operation and administration of sports programs, competitive athletic programs, and community and commercial fitness programs. Prerequisite: admission to exercise sports science - fitness or sport management emphasis. Offered Fall, Spring.

ESS 411 Cr.2

Strength and Conditioning Educator Training

This course is a capstone experience for students specializing in strength and conditioning. Content includes exercise physiology and biomechanics, nutrition and ergogenic aids, testing and evaluation, exercise techniques, program design, and organization and administration of a strength and conditioning facility. Prerequisite: ESS 403 or concurrent enrollment. Offered Fall, Spring.

ESS 418 Cr.4

Teaching Methods in School Health Education

This pedagogy course is focused on the Society of Health and Physical Education (SHAPE) National Health Education Standards, Interstate and Teacher Assessment and Support Consortium (InTASC) Standards and best practices related to methodology and assessment. This course includes a clinical experience organized as a professional development school (PDS) where teacher candidates spend significant time developing lesson plans, teaching, and assessing student learning, as well as interacting with secondary school students and teachers. A professional learning community approach is utilized throughout the course to provide students multiple opportunities to collaborate. A multi-day, consistent schedule to participate in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: ESS 330, ESS 419; ESS 420 taken concurrently; admission to physical, adapted, and school health education. Offered Fall, Spring.

ESS 419 Cr.4

Elementary Methods and Field Experience I in Physical Education

This pedagogy course is focused on Society of Health and Physical Education (SHAPE) National Standards and Grade Level Outcomes for elementary physical education, Interstate and Teacher Assessment and Support Consortium (InTASC) Standards and best practices related to methodology and assessment. This course includes a field experience organized as a professional development school (PDS) where teacher candidates spend significant time developing lesson plans, teaching, and assessing student learning, as well as interacting with elementary school students and teachers. A professional learning community approach is utilized throughout the course to provide students multiple opportunities to collaborate. A multi-day, consistent schedule to participate in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: ESS 300, ESS 361, ESS 362, ESS 363, ESS 366, ESS 367; admission to physical, adapted, and school health education. Offered Fall, Spring.

ESS 420 Cr.4

Secondary Methods and Field Experience II in Physical Education

This pedagogy course is focused on Society of Health and Physical Educators (SHAPE) National Standards and Grade Level Outcomes for secondary physical education, Interstate and Teacher Assessment and Support Consortium (InTASC) Standards and best practices related to methodology and assessment. This course includes a field experience organized as a professional development school (PDS) where teacher candidates spend significant time developing lesson plans, teaching, and assessing student learning, as well as interacting with secondary school students and teachers. A professional learning community approach is utilized throughout the course to provide students multiple opportunities to collaborate. A multi-day, consistent schedule to participate in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: ESS 310, ESS 364, ESS 368, ESS 419; taken concurrent with ESS 418; admission to physical, adapted, and school health education. Offered Fall, Spring.

ESS 421 Cr.3

Sport Operations Management/Event and Venue Management

This course is designed to introduce students to principles and procedures for preparing, planning, operating, managing, and evaluating event and venue in sports settings. Students will gain a greater understanding of event and venue management and the total operation of sports organizations. Prerequisite: admission to exercise sports science - sport management emphasis; junior standing. Offered Fall, Spring.

ESS 423 Cr.2

Sociocultural Factors in Physical Education and School Health Education

This is a content course which focuses on contemporary and historical perspectives on sociocultural and philosophical issues that influence teaching and learning in school health and physical education. Students will analyze how particular students and student groups are advantaged and disadvantaged in and through social practices in school health, physical education, and physical activity environments. Topics include, but are not limited to, race, ethnicity, gender, sexuality, ability, bodies, socioeconomic status, and culturally responsive teaching. Prerequisite: admission to physical, adapted, and school health education; junior standing. Offered Fall, Spring.

ESS 424 Cr.3

Curriculum Development and Administration in Physical Education and School Health Education

This is a culminating course designed to provide an experience in creating a quality health and physical education program through development of all facets of a standards-based K-12 curriculum. The administrative component includes creating policy and procedures as well as current mandates and initiatives in education. Prerequisite: ESS 419; admission to physical, adapted, and school health education. Offered Fall, Spring.

ESS 425 Cr.1

Student Teaching Seminar in Physical Education

This seminar course provides an opportunity to discuss and further develop teacher candidates' critical thinking regarding issues of the field and practice of educating school-age individuals. As a result of this course, teacher candidates will have gained additional understanding of current issues experienced within their student teaching experiences as well as issues around the areas of professionalism, conflict resolution, and classroom management through discussion of practical experiences. Prerequisite: concurrent enrollment in EDS 494 or EDS 495; admission to teacher education; passing content competency benchmarks. Pass/Fail grading. Offered Fall, Spring.

ESS 431 Cr.1

Fitness Programming for Persons with Disabilities

Students learn techniques for health-related physical fitness assessment, individualized exercise prescription, and physical activity adaptations. The focus is on hands-on clinical skill development in an evidence-based exercise program for individuals with disabilities. Students should take this course within two semesters after completion of ESS 430. Repeatable for credit - maximum three. Prerequisite: ESS 231. Offered Fall, Spring, Summer.

ESS 432 Cr.3

Financial Aspects of Sport

This course is designed to study financial management principles including budget development, fundraising, and economic impact for use in the administration of sport and athletic programs. In addition, emphasis will be placed on sources of revenue and expense for sport organizations and their use in sport management. The student will understand why budget and finance in sport is a critical component of all sports related industries. Prerequisite: admission to exercise sports science - sport management emphasis; junior standing. Offered Fall, Spring.

ESS 435/535 Cr.1

Sport for Persons with Disabilities

This course addresses sports that have been modified/adapted based on traditional sports and those developed specifically for persons with disabilities. Content includes the legal aspects and health enhancing benefits for sport participation for persons with disabilities, developmental sport models, disability sport organizations, sport skill development, school and community advocacy and involvement, and interscholastic adapted sport programs. Out of class clinical experience is required in the course. This course is taught largely at a graduate level. Prerequisite: ESS 231; admission into the adapted physical education teaching minor; junior standing. Offered Spring, Summer.

ESS 436 Cr.2

Assessment in Adapted Physical Education

This course presents standardized tests and authentic procedures for assessing the gross motor development, motor skill performance, and health-related physical activity/fitness of persons with disabilities. Students learn to select, administer, and interpret assessment instruments and how to use results to develop the physical education components of individualized education programs (IEPs) as the basis for instructional programs. Types of assessment decisions and the K-12 special education eligibility and service delivery process is studied. Prerequisite: ESS 331; admission to physical, adapted, and school health education. Offered Spring.

ESS 437 Cr.3

Teaching and Service Delivery Models in Adapted Physical Education

This course focuses on evidence-based adapted physical education teaching strategies and service delivery models in K-12 settings. Instructional programming and best practices of early childhood, elementary, middle/secondary, and transitional programs for students with disabilities in adapted physical education are covered. Emphasis is on collaboration among professional service providers such as special educators, general physical educators, and related service personnel (e.g., occupational, physical, and recreational therapists), as well other community agency staff. Practical teaching is included, along with guest presentations on related disciplines and programs. Students are required to participate in a teaching lab with K-12 learners. Lect. 2, Lab 2. Prerequisite: ESS 436; ESS 419 or ESS 420 taken concurrently; admission to physical, adapted, and school health education. Offered Fall.

ESS 439 Cr.3

Teaching and Leadership in Adapted Physical Education

This course provides students with practical teaching and supervision opportunities to enhance their skills in planning, implementing, and evaluating adapted physical education programs for children and youth with disabilities. Special education service delivery process is reviewed and implemented. Emphasis is also placed on effective staff collaboration and consultation as well as teacher and program supervision. In addition, all students are required to participate in the UW-La Crosse Motor Development Program conducted on Thursday evenings. Lect. 2, Lab 2. Prerequisite: ESS 436; admission to physical, adapted, and school health education. Offered Fall, Spring.

ESS 440/540 Cr.3

Advanced Sport Nutrition

This course is designed to provide the student with a working knowledge of advanced topics as they relate to the field of sport nutrition. Such topics will include nutritional biochemistry, ergogenic aids, nutritional strategies for strength/power athletes, endurance athletes and altering body composition. Students will also learn how to assess an individual's dietary intake and utilize technology to determine energy needs of athletes. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: ESS 302, ESS 323. Offered Summer, Winter.

ESS 443 Cr.3

Fitness Across the Lifespan

This course will explore why and how physical activity must change to meet the modifications that occur in the human body as it matures from childhood to older adulthood. Students will address the principles and procedures for designing physical fitness experiences for all ages. Lecture, practice, and field experiences are included. Prerequisite: ESS 302; ESS 303; admission to exercise sports science - exercise science emphasis or a declared emphasis in gerontology. Offered Fall, Spring.

ESS 445/545 Cr.3

Planning Facilities for Physical Activity and Sport

A study of planning techniques concerning facility development and maintenance for schools, athletic clubs, fitness centers and professional sport organizations. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: admission to exercise sports science - sport management emphasis; junior standing. Offered Fall, Spring.

ESS 446 Cr.3

Current Research and Trends in Exercise Science

A lecture/discussion-based course in which relevant and current research and industry trends are thoroughly reviewed and analyzed. Students are encouraged to take this course near the end of their careers as undergraduate students in the exercise sports science major-exercise science fitness or pre-professional emphases. Prerequisite: admitted to exercise sports science major - exercise science fitness or pre-professional emphasis. Offered Fall, Spring.

ESS 447 Cr.3

Administration in Fitness and Sport

The course will cover principles of administrative theory and practice in the fitness and sport industry, including general administrative functions, public relations, personnel, budget and finance, facility management, and evaluation techniques. Prerequisite: admission to exercise sports science major - fitness or sport management emphasis. Offered Fall, Spring.

ESS 448 Cr.3

Promotion and Development of Fitness and Sport Programs

This course will provide understanding of and skill in the promotion process as it relates to advertising and public relations activities for the operation of programs in sport, physical education and fitness. Primary focus will be on the application of promotion principles to specific sport scenarios. Prerequisite: MKT 309, admission to exercise sports science major - fitness or sport management emphasis. Offered Fall, Spring.

ESS 449 Cr.1

Seminar in Fitness/Sports Management

An in-depth orientation to the required senior internship experience. Required course to be taken one semester prior to internship. Prerequisite: GPA of 2.75 (cumulative and major); admission to the exercise sports science major - fitness or sport management emphasis; senior standing. Offered Fall, Spring.

ESS 450 Cr.8-12

Exercise and Sport Science Internship

The internship is designed to be a terminal experience for students majoring in fitness or sport management (12 credits) emphases with an intensive supervised practical work experience. Prerequisite: fitness and sport management majors: all course work for the appropriate major must be completed and a minimum cumulative and major GPA of 2.75. Pass/Fail grading. Offered Fall, Spring, Summer.

ESS 451 Cr.2-3

Practicum in Athletic Coaching

The practicum in athletic coaching is designed to be a culminating experience for students completing the concentration in Coaching Competitive Athletics. Students will seek a placement with a department approved university or public/private school athletic team to obtain practical coaching experience in the sport(s) of their choice. The practicum experience will be supervised by a coach or athletic director of the assigned team and the director of the concentration in coaching competitive athletics. Repeatable for credit in different sport(s) - maximum six. Prerequisite: completion of requirements in coaching concentration with the exception of ESS 368 and elective credits. Pass/Fail grading. Offered Fall, Spring.

ESS 460/560 Cr.1-3

Exercise Science Clinical Forum

Visiting lecturers as well as university professors will address various topics related to exercise science. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit. Prerequisite: junior standing. Offered Occasionally.

ESS 499 Cr.3

Seminar in Physical Education

The provision of intensified experiences in the solution of some individual or group problem. The utilization of some rudimentary research techniques receive marked attention, including the formulation of hypotheses, the design of study, the collection, analysis, and interpretation of data. Prerequisite: open to students of "honor" quality with senior standing; minimum 2.75 cumulative GPA. Offered Occasionally.

Finance (FIN) - Courses

Courses

+FIN 207 Cr.3

Personal Finance

A survey course covering personal financial issues; topics include goal setting, budgeting, major purchases, loan provisions, taxation, insurance coverage, investment opportunities (including stocks, bonds, and mutual funds) and retirement planning. Open to students in all colleges. Offered Occasionally.

FIN/MGT/MKT 323 Cr.3

Integrated Core Business Consulting and Professional Communication

In this course, students will build knowledge and skills needed to integrate and apply material across the functional areas of business to solve complex business problems. Knowledge areas and skill sets that are specifically targeted include decision making and critical thinking, communication, teamwork, and time management. Students develop in these areas while building a foundation in effective business consulting. Students will work in teams to complete applied business consulting projects, while also engaging in smaller written assignments and exercises throughout the course. Prerequisite: admission to business. Students must take this course concurrently with integrated core sections of MGT 308, MKT 309, and FIN 355. Students may not earn credit in more than one of the following: MGT/MKT 301, FIN/MGT/MKT 323. Consent of instructor. Offered Fall.

FIN 355 Cr.3

Principles of Financial Management

Introduction to financial management of the firm. Topics include: relationship of the finance function with other functional areas of the firm, use of financial statements as measures of corporate performance and for financial forecasting, working capital management, time value of money and its use in the valuation of cash flows, security evaluation, capital budgeting, capital structure, financial intermediaries and investment banking, long-term debt, preferred and common stock, and the effect of these financial decisions on dividend policies. Prerequisite: ECO 110, ECO 120; ACC 222; admission to business. Offered Fall, Winter, Spring, Summer.

FIN 360 Cr.3

Principles of Insurance and Risk Management

A survey of insurance and risk management concepts, the insurance industry and common insurance contracts. Topics include: types of insurers, functions of insurers, legal principles of insurance, and analysis of property, liability, life and health contracts. Special emphasis will be placed on personal insurance for the home, automobile, life and health. Prerequisite: ACC 221. Offered Fall, Spring.

FIN 361 Cr.3

Life Insurance

A study of life insurance and its relationship to financial planning. Topics covered are the determination of financial needs for survivors resulting from premature death of a family member, concepts of life insurance and annuities including quantitative foundations, policy provisions, comparisons of alternate products, and taxation issues. Prerequisite: FIN 355; admission to business. Offered Annually.

FIN 370 Cr.3

Corporation Finance

Comprehensive study of current theories concerning the valuation of the firm and its capital structure. Topics emphasized are risk analysis, capital structure, dividend theories, cost of capital, capital budgeting and management of working capital. Prerequisite: FIN 355; admission to business. Offered Fall, Spring.

FIN 380 Cr.3

Principles of Investment

The study of investment instruments. Topics include: valuation of common and preferred stocks, bonds, options, futures contracts, real estate, and several other securities and commodities. The risk associated with each form of investment, construction and management of investment portfolios, investment databases, and current trends in investments are studied. Prerequisite: FIN 355; admission to business. Offered Fall, Spring.

FIN 390 Cr.3

Money and Capital Markets

This course examines the various types of financial institutions and their functions in the financial markets and includes a discussion of the processes, current trends, and regulations in money and capital markets. Financial risks will also be discussed in addition to risk measurement and management methods. Prerequisite: FIN 355; admission to business. Offered Fall, Spring.

FIN 400 Cr.1-3

Finance Forum

Emphasis will be on the examination and study of current financial issues. Topics will vary by semester. Repeatable for credit - maximum six. Prerequisite: junior standing; admission to business. Offered Occasionally.

FIN 407 Cr.3

Advanced Financial Planning

An overview of the financial planning process, including an introduction to the technical and intuitive aspects of the primary components in a financial plan. Financial and personal data are integrated to develop a comprehensive financial model including a variety of components. The components may include balance sheet and cash flow statements, retirement planning, investing strategies, insurance needs, taxes, and estate planning. Prerequisite: FIN 355; senior standing. Offered Annually.

FIN 408 Cr.3

Retirement Planning

An overview of retirement planning is provided, presenting the primary differences between pension, profit sharing, and non-qualified retirement plans. Common retirement plans are reviewed in more detail, including eligibility, vesting, contribution limits, coverage, and distributions. The course is designed for those entering the financial planning or benefits professions. The course provides substantive content in preparation for a variety of financial planning or retirement planning certifications including the Certified Retirement Counselor Program or the retirement planning component of the Certified Financial Planner program. Prerequisite: FIN 355; senior standing; admission to business. Offered Occasionally.

FIN 410 Cr.3

Management of Financial Institutions

The management of commercial banks and other deposit-type financial institutions. Emphasis is placed on the environment in which financial institutions operate, its changing nature, and managerial decision making within that environment. Specific topics include loan and investment policies, asset/liability management, management of investment risk, and regulation of financial institutions. Prerequisite: FIN 390 or ECO 301; admission to business. Offered Occasionally.

FIN 437 Cr.3

Financial Modeling

Application of financial theories and models using spreadsheets to make financial decisions. Focus on utilizing existing and creating new financial spreadsheet functions, sensitivity analysis, and scenario analysis. Prerequisite: FIN 355; admission to business. Offered Fall, Spring.

FIN 440 Cr.3

Multinational Financial Management

The international financial system and the application of basic principles of business finance in an international context. Topics include: the finance function in the multinational firm, foreign exchange markets, cost of capital, and capital expenditure analysis in the multinational firm. International accounting and reporting procedures are reviewed. Prerequisite: FIN 355; junior standing; admission to business. Offered Spring.

FIN 450 Cr.1-6

College of Business Administration Internship

The internship program as conceived and implemented is designed to provide an opportunity for students in the College of Business Administration at the University of Wisconsin-La Crosse to participate in an approved program with cooperating business, governmental, or civic organization for usually 15 weeks of their undergraduate work. For additional information, see internship description in the College of Business Administration catalog section. Repeatable for credit - maximum 15. Prerequisite: cumulative GPA of at least 2.50; ACC 221, ACC 222; BLAW 205; ECO 110, ECO 120, ECO 230; FIN 355; IS 220; MGT 308; MKT 309; admission to business. Consent of department. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

FIN 456 Cr.3

Real Estate Principles

Survey of real estate principles and practices, the economic environment and valuation. Topics include: nature of real property; organization and structure of real-estate markets; alternative land uses; financing and valuation of real estate; and the legal environment. Prerequisite: FIN 355; junior standing; admission to business. Offered Occasionally.

FIN 475 Cr.3

Investment Analysis and Portfolio Management

An in-depth investigation of modern concepts of asset ownership, risks and the reduction of risk through portfolio construction. An efficient markets approach to contemporary capital market and portfolio theory with applications to investment management. Prerequisite: FIN 380; junior standing; admission to business. Offered Fall, Spring.

FIN 485 Cr.3

Problems and Cases in Finance

Application of concepts and techniques to the solution of financial problems in a variety of areas using the case method and computer simulation games. Topic areas include corporation finance, security analysis and investment management, and commercial banking. Prerequisite: FIN 370, FIN 380; admission to business. Offered Fall, Spring.

FIN 499 Cr.1-3

Independent Study

Individual reading or research under the guidance of a staff member. Open to selected, advanced students who have excellent records in the department. Registration with the consent of the student's regular adviser, the instructor and the department chairperson. Approval form available in department office. Form must be completed prior to registration. Repeatable for credit - maximum six. Prerequisite: admission to business. Consent of instructor. Pass/Fail grading. Offered Occasionally.

First-Year Seminar (FYS) - Courses

Courses

+FYS 100 Cr.3

First-Year Seminar

This topics seminar course focuses on developing the knowledge, experiences and skills helpful for success at UWL, including learning strategies, community involvement, and academic inquiry. Students will investigate enduring questions and reflect on the purpose and value of a liberal education. Topics vary by instructor. Prerequisite: degree-seeking student in their first year at UWL or a degree-seeking transfer with 15 or fewer credits earned. Offered Fall, Spring.

French (FRE) - Courses

Courses

FRE 101 Cr.3

French in a Global Society I

The first of two introductory courses in French for students with no knowledge of French, focused on developing the four communicative skills: listening speaking, writing, and reading. Introduction to contemporary Francophone cultures through a variety of topics from everyday life (family, shopping) to the arts (cinema, literature). Offered Fall, Spring.

+FRE 102 Cr.3

French in a Global Society II

The second introductory courses in French emphasizes the development of practical communication skills using an interactive learning approach and integrates cultures from the Francophone world in language learning to provide students with basic survival skills in a French-speaking country. Prerequisite: FRE 101 or placement based on UW System Placement Test scores. Offered Fall, Spring.

+FRE 201 Cr.3

French Language and Cultures in Action I

The first of two intermediate-level French courses which provides a review of basic structures while expanding on grammatical structures and vocabulary to allow students to express themselves in meaningful ways both orally and in writing. Cultural competence is integrated in language learning in an interactive manner. Prerequisite: FRE 102 or placement based on UW System Placement Test scores. Offered Fall, Spring.

+FRE 202 Cr.3

French Language and Cultures in Action II

The second of two intermediate-level French courses which provides a review of basic structures while expanding on grammatical structures and vocabulary to allow students to express viewpoints and opinions on a variety of topics from visual and cultural texts. Prerequisite: FRE 201 or placement based on UW System Placement Test scores. Offered Fall, Spring.

+FRE 220 Cr.3

France and the Francophone World

This course offers both historical and contemporary perspectives on France and its relationship to the Francophone world. Students will examine French history and colonialism and their impact on such regions/countries as Quebec, Martinique, Guadeloupe, Haiti, Senegal, Tahiti, and the Maghreb (North Africa). This course will also explore the multiple identities (based on ethnicity, race, gender and sexual orientation) that continue to "disrupt" the notion of a collective French consciousness as it persists today. These include North-African and Russian immigrants, Jews, women, gays and lesbians. Taught in English. Offered Spring.

FRE 227 Cr.3

French for International Relations

A course designed to prepare students to communicate effectively in French and better comprehend the complex interactions of a globalized world. It addresses written and oral conventions, pragmatics, and intercultural competencies required to pursue collaboration, problem-solving, and decision-making in the context of international relations. Global issues such as environment, health, education, Human Rights, security, and diversity will be discussed specifically within the realm of French-speaking countries. Prerequisite: FRE 202 or equivalent. Offered Summer.

FRE 300 Cr.3

Visual Encounters

This course introduces students to a variety of art and technology-related topics that define French culture today while practicing grammatical structures required to narrate and describe. Analysis of visual artifacts and development of writing skills will take place in contexts such as regional cultures and traditions, culinary arts, cinema, music, art festivals, popular culture, artistic genres, and new technologies. Prerequisite: FRE 202 or equivalent. Offered Fall.

FRE 301 Cr.3

Sound, Speech, and Proficiency

This course first aims to improve students' pronunciation by providing an introduction to the principles of French phonetics and the study of stress, rhythm, and intonation. The course is designed to develop oral interactions through a pragmatic approach to language as students identify and practice different speech acts in their sociocultural contexts, applying interpersonal, interpretive, and presentational means of communication as defined by the ACTFL guidelines to achieve oral proficiency. Prerequisite: FRE 202 or equivalent. Offered Spring.

FRE 305 Cr.3

Exploring the Story

This course introduces students to a variety of narrative structures in their cultural context. Students will increase their vocabulary, reinforce reading strategies, interpret cultural signifiers, and develop critical thinking skills as they confront the printed word in comics, short stories, fairy-tales, fables, poems, or newspaper articles. Prerequisite: FRE 300 or FRE 301. Offered Fall - Odd Numbered Years.

FRE 307 Cr.3

French for Professional Communication

A course designed to prepare students to communicate effectively in professional contexts. It addresses written and oral conventions in business and other professional settings, determines/compares professional expectations across Francophone and Anglophone cultures, and prepares for all aspects of the job search for a company dealing with Francophone professionals, with a focus on Canadian and European exchanges. Prerequisite: FRE 202 or equivalent. Offered Fall.

FRE 317 Cr.3

Practice in Translation

This course is designed to introduce students to translation techniques, strategies, and theories, which students will apply to a variety of text genres. Focus is on translation from French to English so that students can compare and contrast the structures of French and English as they further their language acquisition. Prerequisite: FRE 300 or FRE 301. Offered Spring - Even Numbered Years.

FRE 320 Cr.3

Perspectives on French Civilization

From historical, chronological, thematic and literary perspectives, this course is designed to provide an examination of French Civilization from its origins to the French Revolution. Topics will include socio-political and cultural history, feudalism, absolutism, the Enlightenment, art, music, literature, and architecture. Prerequisite: FRE 300 or FRE 301. Offered Fall - Even Numbered Years.

FRE 322 Cr.3

French without Borders

The course provides an overview of the Francophone world by defining the notions of "Francophonie" from a cultural, historical, political, and socio-linguistic point of view, with an emphasis on current events. Prerequisite: FRE 300 or FRE 301. Offered Fall - Odd Numbered Years.

FRE 337 Cr.3

French 3.0: Focus on Science and Technology

From Pascal's calculator in 17th century France to Arthur Zang's Cardiopad in contemporary Cameroon, the French-speaking world has produced a number of scientific and technological innovations. This course will focus on discovering Francophone cultures through the lens of a variety of scientific topics. Students will continue developing language proficiency while acquiring the specific discourse and vocabulary related to the scientific professions, including health, technology, and technical work specializations they are most interested in. This course will especially be an asset for students desiring to work or intern for international companies, NGOs, Peace Corps, or do mission work in a Francophone country. Prerequisite: FRE 300 or FRE 307. Offered Every Third Semester.

FRE 351 Cr.3

French Cinema

The course introduces students to film analysis and visual literacy while presenting the development of French cinema in its historical and theoretical context. It also includes a study of film adaptations of various literary genres. Prerequisite: FRE 300 or FRE 301. Offered Spring - Odd Numbered Years.

+FRE 395 Cr.3

French Literary Voices in English

This course is designed to be an exploration of Francophone literature using a thematic approach. Students will read, discuss, and write about great texts written in French and translated into English. Texts will include short stories and novels by writers from the classical French canon (e.g., Maupassant, Voltaire, Flaubert, Hugo) and those from the Global French world (e.g., Laye, Memmi, Begag, Ba). Prerequisite: sophomore standing. Offered Fall - Even Numbered Years.

FRE 403 Cr.3

Studies in French/Francophone Literature

A course designed to explore social, political, and cultural issues as related in literary works of authors of French-speaking countries. Specific topics vary by semester but may include "Voices from Quebec" or "Francophone Women Writers". Prerequisite: FRE 305 or FRE 351 or FRE 395. Offered Spring - Odd Numbered Years.

FRE 430 Cr.3

French Connections

This course is designed for students to explore connections between their French studies and other disciplines. Due to its Interdisciplinary nature and its seminar format, the course content is tailored to students' research paper topics, while focusing on the practice of more complex grammatical structures and academic writing conventions in French. Prerequisite: FRE 300, FRE 301, and FRE 307. Offered Spring.

FRE 450 Cr.1-4

National/International Intern Program

A course in French individually tailored to fit career needs: cultural awareness, technical vocabulary in French to prepare students who elect internship credits in other departments. French majors or minors or other students having the equivalency of FRE 202 may elect to take these credits off campus. Repeatable for credit - maximum four. Prerequisite: a declared major in department offering intern programs or a declared major in French. Offered Occasionally.

FRE 495 Cr.2

Honors Seminar in French

An in-depth examination of a topic in French or Francophone literature or civilization concluding with a research paper and presentation to faculty and peers. Prerequisite: FRE 305; one 400-level literature or civilization course; admission to the Alvida Ahlstrom Honors Program. Offered Occasionally.

FRE 498 Cr.1-3

Independent Study

Fieldwork, research, individual projects in a specific area of French language civilization or literature. Repeatable for credit - maximum six. Prerequisite: two advanced french courses; junior standing. Consent of department. Offered Occasionally.

FRE 499 Cr.1-3

Independent Study

Fieldwork, research, individual projects in a specific area of French language, civilization or literature. Repeatable for credit - maximum six. Prerequisite: two advanced french courses; junior standing. Consent of department. Offered Occasionally.

Geography (GEO) - Courses

Courses

+GEO 102 Cr.3

Maps and Society

This course introduces all aspects of maps and how they affect the individual in society. It examines the evolution of maps, the map as an art form, the map as a communication medium for spatial knowledge, the meaning of maps and their relationship to culture and society past and present, the influence of maps on an individual through mass media and the Internet, and the way maps reflect personal and societal points of view. It focuses on privacy and civil liberty issues of the individual in the age of digital information where maps and map databases can disclose the privacy of personal space. In addition, today's GIS maps (in planning, in marketing, in hazard controls, etc.) embed substantial amounts of personal information that can affect personal security and how our lives are directly, indirectly, knowingly, and unknowingly influenced. Offered Fall, Spring.

+GEO 110 Cr.3

World Cultural Regions

This course provides an understanding of the global distribution of world cultures. The cultural, economic and natural patterns and their interrelationships are examined on a global and regional scale. The development and distribution of cultural regions within countries are included when appropriate. Offered Fall, Spring.

+GEO 200 Cr.3

Conservation of Global Environments

Introduction to natural resources, resource management, environmental and land use ethics, environmental impacts of resource utilization and strategies to resolve environmental conflicts. Course examines the relationships between society and the environment from the global to the local scale. Offered Fall, Spring.

+GEO 202 Cr.3

Contemporary Global Issues

This course will offer a contemporary multi-disciplinary perspective regarding the major issues and trends confronting the global society as it enters the 21st century. Emphasis will be given to a critical review and assessment of the origin and present condition of the plethora of situations and problems affecting modern global society. The student will also learn to critically evaluate current and future events. The course will incorporate the views and approaches of the following disciplines: sociology/anthropology, economics, geography, political science, and history. Students may only earn credit in one of the following: ANT 202, GEO 202, HIS 202, POL 202, SOC 202. Offered Fall, Spring.

+GEO 211 Cr.3

Global Climate Change

This course serves as an introduction to causes of natural and human-induced climate change, and the current and future impacts of climate change on environmental systems and society. Actions that could be taken by governments, industry, non-profit organizations, and individuals to mitigate the magnitude and effects of climate change will be addressed. The course will investigate social, cultural, and political aspects associated with climate change policy, including how vulnerability, resilience, and adaptability to a changing climate vary across the globe. Offered Fall, Spring, Summer.

GEO 305 Cr.3

Geographic Information Systems and Science I

Students will acquire fundamental knowledge and learn key concepts underlying spatial data, different map types and uses, thematic symbolization and visualization, and spatial analytical techniques. They will learn how to critically assess and communicate knowledge concerning spatial environments. Students will also learn how to use GIS and Web mapping technologies. Lect. 2, Lab 2. Offered Fall, Spring.

GEO 307 Cr.3

Power, Space, and Global Change

As individuals and groups interact, they create and modify political and economic structures. Conflicts and inequalities, as well as improvements to the human condition, are examined at multiple scales. Territorialities, population dynamics, states, borders, and elections are explored with the tools of human geography. Offered Fall.

GEO 309 Cr.3

Urban Geography

Geographical study of cities, their form, function, site and situation. Classification of cities, urban land use patterns, and the role of the city within its region. Offered Occasionally.

GEO 310 Cr.3

Transportation Geography

Transportation geography is the study of the movement of people and commodities across the earth's surface. It deals with the spatial interactions between people and places. This course is designed to introduce you to the study of transportation systems from a geographic perspective. One can think of transportation as a service that the transportation industry offers travelers to insure mobility. The relation between the supply for transportation and the demand for moving people and goods characterize the performance of the transportation system. Such performance is extremely important for our sustainability as it relates to the well being of our economy, society and environment. Studying a transportation system and its performance entails the analysis of various aspects that relate to infrastructure, vehicles, and operations by which vehicles are operated using the available infrastructure. The effective management of transportation systems requires an understanding of various concepts and analytical methods that are often used by transportation professionals to make informed decisions about transportation policy. While transport geographers study a wide range of topics, the focus of this introductory course is on: theoretical and practical concepts of transport geography, current transportation issues and problems, and analytical methods for describing, analyzing and modeling transportation systems using GIS software. Offered Annually.

GEO 318 Cr.3

The Geography of Latin America and the Caribbean

The cultural and physical characteristics of Latin America and the Caribbean region are systematically examined and explained. This includes an examination of diverse physical and 'built' environments that encompass this region, from the borderlands of northern Mexico to the Tierra Del Fuego of the south; from the lush tropical environments of the Amazon, Jamaica, and Puerto Rico, to the Altiplano and arid regions of the west; from disparate lowlands to the startling mountain zones of the Andes. Indigenous civilizations which developed out of unique arrangements with these complex environments as well as those imposed and imported since 1500 will be explored in depth. Offered Spring - Even Numbered Years.

GEO 321 Cr.3

Sustainable Development and Conservation

This course is designed to engage students in critical thinking with regard to how the current momentum in environmental conservation is shaping global development practices. The dual and seemingly conflicting mandates of conservation and development are examined not only through theory but also case studies from different parts of the world. Offered Spring.

GEO 335 Cr.3

Islamic Asia: Cradle of Civilizations, Geographies of Conflict

The Middle East and nearby areas (sometimes collectively called Southwest Asia) have played a key role in the development of cultures and human interactions with the environment for millennia. This course will apply a critical scholarly approach to understanding the complex human geographic patterns, structures, and interactions at the crossroads of Asia, Europe, and Africa. Special attention is given to the political, cultural, economic, and military geographies of recent and current conflicts. Offered Spring - Odd Numbered Years.

+GEO 340 Cr.3

Earth's Polar Regions

This course explores the human and environmental geography of the Arctic and Antarctic, including physical landscape and climate, terrestrial and marine ecosystems, natural resources and development, exploration, governance, and indigenous peoples. The circumpolar northern Arctic region will be compared with the southern continent of Antarctica. Anthropogenic and climate change impacts on the Arctic and Antarctic will be discussed, as will the interconnectedness of polar regions to global processes and international issues. Offered Fall - Even Numbered Years.

GEO 401 Cr.1

Focus on Geography: A Capstone Course

This seminar-style course is designed to prepare students for graduate school and/or a career in geography and earth science. This course covers the basic concepts of interviewing, cover letter and resume development, portfolios, and oral and written communication. Guest speakers will discuss graduate and career opportunities available to geography majors. Students are expected to actively participate in the assessment of their major and their programmatic learning outcomes. Prerequisite: senior standing. Offered Fall, Spring.

GEO 405/505 Cr.3

Geographic Information System and Science II

Building upon lessons learned in GEO 305, this course focuses on geospatial analysis and database development. The course includes both theoretical and applied aspects of GIS analysis. GIS software, with an emphasis on ArcGIS, will be used to explore geographic questions. Hands-on exercises pertaining to environmental science, natural resource management, business, and urban planning will be used to complement lecture material. Topics will include data organization, database structure, input and output, data quality, and geographic analysis of spatial and attribute data. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: GEO 305; STAT 145; junior standing. Offered Fall, Spring.

GEO/ECO/HIS/POL/PSY/SOC 408 Cr.4

Teaching and Learning History and Social Studies in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in history and social sciences. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 351. (Cross-listed with ECO/GEO/HIS/POL/PSY/SOC; may only earn credit in one department.) Offered Fall, Spring.

GEO 410/510 Cr.3

Geospatial Field Methods

This course covers fundamental concepts of geospatial data collection, analysis, and representation. Students gain hands-on experience using geospatial technology at field sites in the La Crosse area. It includes reconnaissance and surveys using current methods, including GPS, total stations, sonar, and unmanned aerial systems; and practical integration of field data into a geographic information system. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: GEO 405 or concurrent enrollment; junior standing. Offered Fall.

GEO 412/512 Cr.3

Geospatial Applications of Unmanned Aerial Systems

This course provides an introduction to the Unmanned Aerial System (UAS) from the geospatial perspective which includes: UAS sensors and platforms, civilian and remote sensing applications, sensors calibration and boresighting, operational requirements, data processing using specialized software to derive products such as ortho-rectified imagery, multispectral imagery, digital terrain and surface models, current rules and regulations governing owning and operating a UAS in the United States. Students in this course will get hands-on experience of UAS mission planning and flying with both fixed-wing and multi-rotor UAS for environmental data collection outside the classroom. The course content will also prepare the students for the remote pilot exam conducted by the FAA. They will complete hands-on lab exercises involving UAS data pre-processing and analysis to generate geospatial products and assess their accuracy. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: GEO 305; junior standing. Offered Occasionally.

GEO 415/515 Cr.3

Remote Sensing of the Environment I

This course is an introduction to remote sensing, emphasizing satellite multispectral observations of the earth applied to such fields as agriculture, forestry, water resources, urban and regional planning, and environmental assessment. Upper Midwest and selected areas worldwide are explored with visual and digital image processing techniques. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: GEO 305; junior standing. Offered Fall.

GEO 418/518 Cr.3

Map Design and Geovisualization

In this course students will learn about the process of making maps, how to acquire and appropriately manipulate spatial data, and how to design clear, compelling, and beautiful maps. In addition to the key theories underlying the cartographic discipline, students will learn technical skills to enhance their other research interests and make them far more competitive on the job market once they graduate. Students will apply their knowledge about map design using cutting edge software. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: GEO 305; junior standing. Offered Fall.

GEO 422/522 Cr.3

Meteorology

Atmospheric concepts and processes of the earth's weather are covered. Principles and laws which govern the behavior of the atmosphere are investigated, including energy exchange between the earth and the atmosphere, forces governing atmospheric motion, atmospheric moisture and stability, condensation and precipitation processes, air masses and cyclogenesis, thunderstorm and tornado development, and hurricanes. Surface and upper-air charts, synoptic patterns, thermodynamic charts, radar and satellite images, and weather patterns are analyzed. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: ESC 221; junior standing. Offered Spring.

GEO 425/525 Cr.3

Biogeography

A systematic analysis of the geographic distribution of organisms from historical, ecological and regional perspectives. Emphasis is placed on the principles and the methods of biogeography. Special reference is made to bio-geographic regions, the distribution of organisms in space and time, and ecological biogeography. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: ESC 101; junior standing. Offered Fall - Odd Numbered Years.

GEO 427/527 Cr.3

Sustainable Water Resource Management

This course is designed to engage students in critical thinking with regard to the management of water resources within the socio-ecological framework. Students will understand how the interacting dynamics of the natural environment, social factors, politics, and economics shape sustainable water resources policies and practices. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: junior standing. Offered Fall - Odd Numbered Years.

GEO 428/528 Cr.3

Past Environmental Change

An overview of the study of environmental change during the Quaternary. Approaches used to understand past climatic conditions and effects on terrestrial and marine ecosystems at global, regional and local scales will be explored, as will physical, geochemical and biological methods associated with continuous and depositional environments. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: ESC 221 and ESC 222; junior standing. Offered Alternate Years.

GEO 430/530 Cr.3

River Systems

A systematic study of the interactions between flowing water and surface landforms. Emphasis is placed on watershed and stream development, sediment transport and storage, flow frequency analysis, and applications of fluvial principles to river management and stream restoration. Class activities will include field exercises in the La Crosse region, mathematical analysis of hydrologic variables, and spatial analysis with Geographic Information Systems. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: ESC 222; junior standing. Offered Spring - Odd Numbered Years.

GEO 440/540 Cr.3

Geographic Interpretation of Aerial Photographs

Systematic applications of aerial photographs in the interpretation and analysis of geographic problems. Emphasis is placed on the interpretation of digital photographs within a geographic information system. Topics include urban and rural land use, natural resource, and environmental assessment. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect.2, Lab 2. Prerequisite: GEO 405; junior standing. Offered Spring.

GEO 445/545 Cr.3

Remote Sensing of the Environment II

This course covers advanced techniques of digital satellite and airborne image analysis and processing, emphasizing theory and applications in natural resource, land use and environmental assessment. It includes practical approaches to integrating imagery with geographic information systems for spatial analyses and decision making. Data acquisition, integrity, manipulation, formatting, storage, and retrieval are also examined. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: GEO 415; junior standing. Offered Spring.

GEO 450 Cr.1-6

Internship in Geography and Earth Science

This internship experience is an academically relevant field experience in geography or earth science within government, industry, business, nonprofit, or community agency. The internship must be arranged through Career Services and approved by a faculty supervisor in the Department of Geography and Earth Science. Students must participate in the internship experience during the semester for which they are registered for academic credit. No more than three credits may be applied to a major or minor in geography and earth science. Repeatable for credit - maximum 12. Consent of instructor. Pass/Fail grading. Offered Fall, Spring, Summer.

GEO 455/555 Cr.3

Web Mapping

In this course, students will learn how to produce and design interactive web maps for communication. Web maps take many forms and they are continually changing. Thus, the objective of this course is to do two things: (1) develops proficiency in the scripting languages and tools most frequently used to design and create these maps; and (2) teaches the theory and concepts underlying good web map design so that as the technologies change in the future students will still be able to design effective web maps. At the end of this course, students will be able to design a web map from scratch. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: GEO 305; GEO 418; junior standing. Offered Spring.

GEO 460/560 Cr.3

Environmental Hazards

Environmental processes are investigated in light of the hazards they might pose for development and how they may be avoided, mitigated and managed. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: ESC 221 or ESC 222; junior standing. Offered Fall - Even Numbered Years.

GEO 465/565 Cr.3

Scripting in GIS

This course will teach students how to customize within GIS software using scripting and programming tools commonly used in GIS discipline. Students will learn about the conceptual and practical aspects of programming for geographic applications using Python, a free open-source scripting language. Python is well integrated with all the major GIS softwares and a very popular language among GIS professionals. The course focuses on solving geographic problems by modifying and automating generic GIS software through programming. In this course, students will learn general and transferable scripting skills, and GIS-specific applications, including the basics of writing and modifying scripts, batch processing and automation of repetitive geoprocessing tasks, and designing complex geoprocessing tasks. The skills learned in this course are equally applicable in scientific research, the public sector, and in industry. Students taking this course must be familiar with geographic data structures, basic GIS concepts, and demonstrate basic understanding of geospatial analysis. No prior programming experience is required or expected. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: GEO 405; junior standing. Offered Occasionally.

GEO 470/570 Cr.1-3

Special Topics in Geography/Earth Science

Specifically selected topics or skills which may be designed for the interest of special groups will be offered with formalized instruction and methodology appropriate to geography and/or earth science. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. May be counted as an elective in the geography major or earth science minor at the discretion of the Geography/Earth Science Department. Prerequisite may be required at the discretion of the department. Repeatable for credit - maximum six. Prerequisite: junior standing. Offered Occasionally.

GEO 476 Cr.1-3

Geography/Earth Science Topics for Teachers

Selected topics in geography and/or earth science pertinent to applications in the teachers' classrooms. Courses are designed to meet the needs of teachers so that they may implement the course material into their classroom teaching. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: junior standing. Offered Occasionally.

GEO 485/585 Cr.3

Geographic Information System and Science III

This course covers advanced theories in geographic information systems database structures, advanced applications, database transfers, database management, use of census data, spatial analysis, and decision-making. There will be an emphasis on ARCGIS and its applications and integration of GIS with remote sensing and GPS. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: GEO 405; STAT 145; junior standing. Offered Spring.

GEO 490/590 Cr.1-3

Independent Study

This course is a directed study of a topic in geography and earth science that is outside what is offered through regularly scheduled courses and is completed under the direction and supervision of a member of the Geography and Earth Science faculty. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. A written report is an expected outcome. Repeatable for credit - maximum six. Maximum three credits applicable to major. Prerequisite: junior standing. Consent of department. Offered Fall, Winter, Spring, Summer.

GEO 495/595 Cr.1-3

Seminar in Geography/Earth Science

Investigation into various topics in geography or the earth sciences. Topics will be offered at intervals with a specific title assigned to each. Check schedule of classes for the next offered topic. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit - maximum six. Prerequisite: two semesters of geography and/or earth science; junior standing. Additional prerequisite may be required by the instructor. Offered Occasionally.

GEO 499 Cr.1-3

Undergraduate Research

Individual research by an advanced student under the supervision of a faculty member in the Geography/Earth Science Department. The student must present a written report and either have their work published in an appropriate journal or presented either orally or by poster at a conference acceptable to the department chair and adviser. A contract must be signed by the student, the project advisor, the student's advisor and the Geography/Earth Science Department Chair. Repeatable for credit - maximum three. Three credits may be applied to a major or minor in geography and earth science. Prerequisite: 12 credits of geography and/or earth science with six of the credits numbered 300 or above, or consent of the instructor and department chair. Offered Fall, Winter, Spring, Summer.

German (GER) - Courses

Courses

GER 101 Cr.4

German in a Global Society I

The first of two introductory courses in German. The five language skills: listening, speaking, writing, reading, and culture are introduced. Offered Fall.

+GER 102 Cr.4

German in a Global Society II

The second introductory course in German comprehension, speaking, writing, reading, and culture. Prerequisite: GER 101 or placement based on UW System Placement Test scores. Offered Spring.

+GER 201 Cr.4

German Language and Cultures in Action I

The first of two intermediate-level German courses. Students continue to develop all language skills with special emphasis placed on refining speaking and listening comprehension. Prerequisite: GER 102 or placement based on UW System Placement Test scores. Offered Fall.

+GER 202 Cr.3

German Language and Cultures in Action II

The second of two intermediate-level German courses, designed specifically to transition students to upper-level content courses. Students continue to develop all language skills with special emphasis placed on refining reading and writing in German. Topics in recent German history and contemporary German society are explored while obtaining a grasp of more complex grammatical structures. Prerequisite: GER 201 or placement based on UW System Placement Test scores. Offered Spring.

GER 300 Cr.3

Advanced German

Development of all German language skills with emphasis on reading and writing. Prerequisite: GER 202 or equivalent. Offered Spring - Even Numbered Years.

GER 301 Cr.3

An Introduction to German Literature

A beginning literature course designed to teach the student to read with depth and critical ability. Emphasis will be on German theatre, the short story, and poetry. Prerequisite: GER 202 or equivalent. Offered Fall - Even Numbered Years.

GER 311 Cr.3

German Conversation and Composition

Practice in oral and written German to gain fluency in idiomatic style. Prerequisite: GER 202 or equivalent. Offered Spring - Odd Numbered Years.

GER 313 Cr.3

German Grammar and Composition

An intensive study of German grammar and stylistics with an emphasis on controlled compositions. Prerequisite: GER 202 or equivalent. Offered Spring - Odd Numbered Years.

GER 315 Cr.3

Business German

A course designed to prepare advanced students in German to communicate effectively in the business world. Intensive practice in oral comprehension, speaking, writing, utilizing special, topical vocabulary related to international commerce. Prerequisite: GER 202 or equivalent. Offered Occasionally.

GER 320 Cr.3

German Civilization: 1870-Reunification

A topical and contrastive approach to German culture and civilization. A study of the social and political organization of Germany from 1870 to reunification in 1989, based on an historical perspective with special emphasis on the forces which led to National Socialism and the division of Germany after World War II. Milestones in German cultural history prior to 1870 will be touched on briefly. Prerequisite: GER 202 or equivalent. Offered Occasionally.

GER 321 Cr.3

German Civilization: 1989-Present

A study of contemporary life in the German-speaking world with particular emphasis on the Federal Republic since unification. Topics include unification, the political system, the educational system, and the geography of the region. The multi-cultural aspects of Germany, Austria, and Switzerland will be highlighted. Prerequisite: GER 202 or equivalent. Offered Occasionally.

GER 326 Cr.1

Current Events

A weekly discussion of current events in the German-speaking world, based on readings and television broadcasts in the target language. This course is one of four one-credit elective courses offered in the German studies program. A maximum of six credits from a combination of GER 326, GER 327, GER 328, and GER 329 will be applicable to the German majors or minors. (Each individual course can only be taken three times for a total of three credits.) Prerequisite: GER 202 or equivalent. Offered Occasionally.

GER 327 Cr.1

Grammar Review

A course designed to provide additional practice and review of German grammar and syntax. Students will engage in focused writing assignments that will allow them to master frequently occurring grammar structures (e.g., past tenses in narration, object pronouns, relative pronouns, adjective endings.) This course is one of four one-credit elective courses offered in the German studies program. A maximum of six credits from a combination of GER 326, GER 327, GER 328, and GER 329 will be applicable to the German majors or minors. (Each individual course can only be taken three times for a total of three credits.) Prerequisite: GER 202 or equivalent. Offered Occasionally.

GER 328 Cr.1

Short Stories

A course designed to help students improve their reading and writing skills in German. Through the study of short stories, students will learn reading strategies, build their vocabulary, and review relevant grammar concepts. This course is one of four one-credit elective courses offered in the German studies program. A maximum of six credits from a combination of GER 326, GER 327, GER 328, and GER 329 will be applicable to the German majors or minors. (Each individual course can only be taken three times for a total of three credits.) Prerequisite: GER 202 or equivalent. Offered Annually.

GER 330 Cr.3

German Conversation and Phonetics

A study of the German-language sound system. Students learn the IPA (International Phonetic Alphabet) modeling their speech after native speakers -both live and from recorded materials. Sound patterns are reinforced through conversational exercises which are based upon current events, readings, and cultural nuances. Prerequisite: GER 202 or equivalent. Offered Spring - Even Numbered Years.

GER 351 Cr.4

Films in German

The study of the German-speaking world film viewing, discussion and writing assignments will all be in German. Lect. 3, Lab 2. Prerequisite: GER 202 or equivalent. Offered Occasionally.

+GER 398 Cr.3

German Thinkers and Popular Culture

A course that critically examines instances of popular culture such as Hollywood movies, reality TV, pop songs, social media sites, and bestselling novels through the lens of various philosophical traditions. Focusing predominantly on German thinkers from the 18th-20th centuries such as Kant, Schopenhauer, Nietzsche, Freud, and Benjamin, the course explores how their ideas can help a person today find deeper meaning in pop culture, as well as how pop culture might aid in understanding these thinkers' difficult theories. Taught in English. Offered Fall - Even Numbered Years.

+GER 399 Cr.3

German Literature in Translation

A course designed to introduce students to great works of German literature. The course will center on representative writings by leading authors of the 19th, 20th, and 21st centuries whose works illustrate important aspects of German history and culture. In general these will be longer works of fiction and/or multiple works by such writers as Kafka, Goethe, Kleist, Mann, Boll, Grass, Wolf, etc. Works and authors will vary. Offered Fall - Odd Numbered Years.

GER 403 Cr.3

Studies of German Literature

A course designed to survey major literary movements and authors. Specific topics vary by semester. Repeatable for credit - maximum six. Prerequisite: a three credit 300-level German course. Offered Occasionally.

GER 450 Cr.1-4

National/International Intern Program

A course in German individually tailored to fit career needs: cultural awareness, technical vocabulary in German to prepare students who elect internship credits in other departments. German minors or other students having the equivalency of GER 202 may elect to take these credits off campus. Repeatable for credit - maximum four. Prerequisite: a declared major in department offering intern program or a declared minor in German. Offered Occasionally.

GER 498 Cr.1-3

Independent Study

Fieldwork, research, individual projects in a specific area of German language, civilization or literature. Repeatable for credit - maximum six. Prerequisite: two advanced German courses; junior standing. Consent of department. Offered Occasionally.

GER 499 Cr.1-3

Independent Study

Field work, research, and individual projects in a specific area of German language, civilization or literature. Repeatable for credit - maximum six. Prerequisite: two advanced German courses; junior standing. Consent of department. Offered Occasionally.

Global Cultures and Languages (GCL) - Courses

Courses

GCL 101 Cr.4

Elementary Languages I

This is the first of two introductory courses in target languages which covers oral and written language study, reading, and grammar. Repeatable for credit in different languages - maximum eight credits. Offered Fall.

+GCL 102 Cr.4

Elementary Languages II

This is the second of two introductory courses in target languages which covers oral and written language study, reading, and grammar. Repeatable for credit in different languages - maximum eight credits. Prerequisite: GCL 101 in the target language. Offered Spring.

+GCL 201 Cr.4

Intermediate Languages I

This is the first of two intermediate level courses that covers oral and written language study, reading, and grammar. Repeatable for credit in different languages - maximum eight credits. Prerequisite: GCL 102 in the target language. Offered Fall.

+GCL 202 Cr.4

Intermediate Languages II

This is the second of two intermediate level courses that covers oral and written language study, reading, and grammar. Repeatable for credit in different languages - maximum eight credits. Prerequisite: GCL 201 in the target language. Offered Spring.

+GCL 299 Cr.3

Global Literature in Translation

The primary focus of this course is on major and representative works originally written in French, German, Russian, Spanish and/or Chinese. The course is taught in English by specialists of the respective literatures. Content and theme vary with instructors. Offered Occasionally.

GCL 300 Cr.3

World Language Education: Field Experience I

This course is designed to equip teacher candidates to understand theoretical and research-based foundations of world language instruction. Through an integrated practicum experience at a local school, candidates will learn about the complex processes of planning discipline-specific world language instruction, engaging students in learning, and assessing student learning. Candidates will further develop understanding and practices related to the topics of teacher performance assessment (edTPA), professionalism, and classroom management. A multi-day, consistent schedule (typically 3 consecutive half days) in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203, EDS 206; concurrent enrollment in GCL 400; admission to teacher education. Offered Spring.

GCL 310 Cr.3

Theories and Research in Second Language Acquisition

This course is designed as an introduction to the field of second language acquisition. It surveys the different theories of second language acquisition and focuses on connecting theory to practice through student-led undergraduate research projects. In this course, learners will gain foundational knowledge of second language acquisition and related theories and will examine current research trends through the analysis of various empirical studies as related to second language acquisition. Prerequisite: junior standing and one of the following: AP foreign language score of 3 or higher; placement into 201-level or higher foreign language course; score 70 or higher on La Crosse Battery (non-native speakers of English); grade "B" or better in 102-level or higher foreign language course taken at UWL (taught in foreign language). Offered Fall.

GCL 320 Cr.3

World Language Education: Field Experience II

This course is designed to equip teacher candidates to understand theoretical and research-based foundations of world language instruction. Through an integrated practicum experience at a local school, candidates will learn about the complex processes of planning discipline-specific world language instruction, engaging students in learning, and assessing student learning. Candidates will further develop understanding and practices related to the topics of teacher performance assessment (edTPA), professionalism, and classroom management. A multi-day, consistent schedule (typically 3 consecutive half days) in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and the cooperating teacher. Prerequisite: GCL 300; concurrent enrollment with GCL 420; admission to teacher education; junior standing. Consent of department. Offered Fall.

GCL 398 Cr.1-3

Advanced Languages

This course is an advanced study of target languages and cultures. Instruction may be offered on an individualized basis or when a course is available on another campus, through distance education (CLP). Through collaboration with another campus or program, students have the opportunity to take a course in a language not currently taught at UWL. Repeatable for credit in different languages - maximum six credits per language. Prerequisite: 202-level course in the target language. Offered Occasionally.

GCL 400 Cr.3

Teaching World Languages: Methods and Approaches

This course, taken concurrently with a Field I experience course, is designed to prepare students with the knowledge and skills necessary to succeed as professional world language educators. As the first course in the program's two-course methods sequence, this course is intended to introduce the student to prominent approaches and methods of language teaching as well as guiding frameworks and essential concepts in the field. Students will connect theory to practice by engaging in introductory activities focused on philosophies of language teaching, unit planning, assessment, and observations. Prerequisite: EDS 351, EDS 402, or concurrent enrollment in GCL 300; admission to teacher education. Offered Spring.

GCL 420 Cr.3

Teaching World Languages: Design and Application

This course, taken concurrently with a Field II experience course, is designed to prepare students with the knowledge and skills necessary to succeed as professional world language educators. As the second course in the program's two-course methods sequence, this course will prepare students to design and implement effective world language lessons. Students will connect theory to practice by engaging in applied activities related to lesson and task design, teaching demonstrations, formative assessment, technology integration, and other practical methods. Prerequisite: GCL 300 or EDS 402; concurrent enrollment with GCL 320 or EDS 446; admission to teacher education; junior standing. Offered Fall.

Health and Wellness Management (HWM) - Courses

Courses

HWM 300 Cr.3

Introduction to Human Health

This course is designed to provide students with a general background knowledge on many of the issues impacting our health today. Topics of study will include issues in mental, physical and social health such as stress, nutrition and fitness, alcohol, tobacco and other drugs, relationships and sexuality and diseases and disorders. An introduction to behavior change theories and the factors contributing to overall wellness will also be included. Prerequisite: Introduction to Biology. Consent of department. Offered Fall, Spring, Summer.

HWM 305 Cr.3

The Wellness Profession

This course explores the definition of wellness, health promotion and the seven dimension model of wellness. Students will learn the professional role and personal commitment required to implement life-style wellness programs. The course includes an overview of the history and philosophy contributing to the success of wellness and health promotion professionals. Students learn through assigned experiential learning the basic wellness principles. Activities explore personal wellness and whole systems healing in the seven-dimensions of spiritual, physical, emotional, career, intellectual, environmental, and social. Prerequisite: Introduction to Psychology. Consent of department. Offered Fall, Spring, Summer.

HWM 310 Cr.3

Changes Across the Lifespan

This course explores research and theory regarding the nature and processes of human development from early adulthood through old age and death. Key topics include biological theories of aging; the changing body; disorders of the brain; personality development; changing memory and thinking skills; relationship issues; careers and retirement, and death/dying. Prerequisite: Introduction to Biology. Consent of department. Offered Fall, Spring, Summer.

HWM 315 Cr.3

Workplace Wellness Program Management

The objective of this course is to examine the issues in healthcare and defining the quality of care in healthcare programs. The course will focus on health care financing and insurance, objectives of financial management, leadership styles, managing costs, and managing healthcare professionals. Consent of department. Offered Fall, Spring, Summer.

HWM 320 Cr.3

Health and Medical Terminology

The purpose of this course is to introduce the student to basic health terminology. Since health care uses a unique blend of prefixes, suffixes, and terms related to both preventative and clinical care, it is important that the wellness professional has the knowledge and abilities to decipher this information. Consent of department. Offered Fall, Spring, Summer.

HWM 325 Cr.3

Health Literacy

This course will explore the current understandings and work in health literacy research, advocacy, and outreach efforts across the various health education and related fields. It will include readings, discussions, and competencies in evaluation of health information for quality and credibility; locating health information and determining quality resources; identifying and assessing population health literacy; and understanding the networks of agencies working in health settings to address literacy in the health field. Prerequisite: Introduction to Psychology. Consent of department. Offered Fall, Spring, Summer.

HWM 335 Cr.3

Worksite Health Environment

This course examines the workplace environment's influence on daily health decisions and focuses on practical, contextual levers of behavioral change. Novel insights from the fields of behavioral economics and consumer marketing will be reviewed to help students understand the cognitive barriers to health behavior change and the environmental "nudges" that can be leveraged to overcome these barriers at work. Students will explore environmental assessment tools, active design principles, workplace policies, supportive research and real world examples. Consent of department. Offered Fall, Spring, Summer.

HWM 345 Cr.3

Physical Activity and Nutrition for Wellness Managers

This course presents professional recommendations and guidelines for physical activity and nutrition. Students will design workplace strategies that will meet recommendations and guidelines to support employees. Prerequisite: Introduction to Biology. Consent of department. Offered Fall, Spring, Summer.

HWM 350 Cr.3

Research and Statistics for Wellness Managers

This course is designed to familiarize students with research nomenclature, procedures for the design and evaluation of research and interpretation of statistical analysis in the health field. This course will also provide the tools for critically evaluating the validity of health research. Consent of department. Offered Fall, Spring, Summer.

HWM 360 Cr.3

Stress, Dependencies, and Addictions

This course examines common behavioral strategies with regard to stress and its management, and the use of alternative remedies for physical and emotional dependencies and addictions. Prerequisite: Introduction to Biology; Introduction to Psychology. Consent of department. Offered Fall, Spring, Summer.

HWM 370 Cr.3

Understanding and Effecting Health Behavior Change

This course provides the basic knowledge of foundational change theories, including the Transtheoretical Stages of Change model, in order to help students understand how health behavior change happens. Included in the course is a self-reflection on personal wellness and strategies for implementing health behavior change. Prerequisite: Introduction to Psychology; HWM 300. Consent of department. Offered Fall, Spring, Summer.

HWM 385 Cr.3

Marketing and Communication for Wellness Managers

Students will develop basic marketing and promotional skills, grounded in the disciplines of social marketing, health communication and business marketing that address consumer health "needs" and customer "wants." Students will be able to assess market opportunities in wellness services, programs and facilities, and create marketing strategies and tactics. Emphases will be placed on best practices for behavior change, increased cost savings for employers, improved customer/employee participation and /or revenues for wellness programs, services and facilities. Prerequisite: HWM 325. Consent of department. Offered Fall, Spring, Summer.

HWM 405 Cr.3

Survey of Information Technology in Wellness

This course is designed to provide students with an overview of information technology tools in the wellness industry and legal considerations for their use, such as but not limited to web portals, online assessments, health records applications, telephonic and digital health coaching, online challenges, online tracking tools, social media, videos, podcasts, mobile apps, and wearables. Prerequisite: HWM 315. Consent of department. Offered Fall, Spring, Summer.

HWM 430 Cr.3

Population Health for Wellness Managers

This course introduces the evolution of health problems and services and will examine the methods designed to capture a community health profile. The participant will apply concepts involved in measuring and understanding the health of individuals and populations in order to enhance quality of life. The key social determinants of wellness and their interactions will be considered. Prerequisite: HWM 300; HWM 350. Consent of department. Offered Fall, Spring, Summer.

HWM 460 Cr.3

Leadership and Change Management in Health

This course will examine the various leadership and management styles, including business models of leadership. Organizational behavior, decision-making, and attributes of effective leadership will be reviewed in this course. Understanding the impact of changes in healthcare, wellness, and fitness programs on various organizations is an objective of this course. Prerequisite: HWM 315. Consent of department. Offered Fall, Spring, Summer.

HWM 470 Cr.3

Assessment and Evaluation for Wellness Managers

This course surveys general approaches to assessment, programming and evaluation in health and wellness settings. Participants will explore individual, group, and organizational approaches to assessment, programming, and evaluating planned and organized efforts to promote both health and wellness. Prerequisite: HWM 335; HWM 430. Consent of department. Offered Fall, Spring, Summer.

HWM 475 Cr.3

Employee Health and Well-Being

Successful companies must understand the importance of workplace involvement in health. The relationship of employee health to healthcare costs and productivity will be discussed as a return on investment (ROI) and an investment in human capital. Strategic and product management planning are developed in relationship to disease management versus population wellness theory. Assessments of employer needs, organizational culture, environmental policy, and procedures supportive to desired outcomes are practiced. Professionals learn about aligning client needs and wants with best practice program design, implementation, and evaluation for successful results. Age, gender, race, and issues that affect participation in wellness programs are reviewed. Prerequisite: HWM 385. Consent of department. Offered Fall, Spring, Summer.

HWM 480 Cr.3

Employee Benefits for Wellness Managers

The design and administration of a health care plan plays a key role in attracting and retaining employees and implementing employer's cost savings. This course is designed to provide students with a solid introduction to the basic issues of health care benefits and teach students how to integrate successful return on investment (ROI) strategies for adopting preventive health benefits that enhance employees' well-being. Prerequisite: HWM 315. Consent of department. Offered Fall, Spring, Summer.

HWM 485 Cr.3

Health Coaching for Wellness Managers

The course will assist in developing a strong, useful theoretical viewpoint for health coaching as well as understanding the approaches of therapists and how differential treatment therapeutic goals are set. The definition of coaching and diverse methodologies will be taught, practiced, compared, and contrasted. Students will specifically gain an understanding of what treatment and by whom is most effective for individuals displaying specific problems and under what set of circumstances. As a result students will learn a variety of treatment modalities and learn to respect vastly differing world views. Prerequisite: HWM 305; HWM 370. Consent of department. Offered Fall, Spring, Summer.

HWM 492 Cr.1-6

Independent Study in Health and Wellness Management

This course is designed as a supplement to the required course work in HWM to meet special interests and/or needs of the student. Repeatable for credit - maximum six. Consent of department. Offered Fall, Spring, Summer.

HWM 493 Cr.1

Health and Wellness Management Fieldwork Prep

This course requires students to identify and secure fieldwork placement for completion the following semester. The fieldwork experience develops skills in program planning, implementation, promotion and evaluation, oral and written communication, collaboration and networking. Consent of department. Pass/Fail grading. Offered Fall, Spring, Summer.

HWM 494 Cr.3

Health and Wellness Management Fieldwork

Students engage in practical fieldwork experience as a pre-professional in a health/wellness setting to utilize skills and knowledge acquired in previous courses. This fieldwork experience is designed to further develop skills in some, but not necessarily all, of the following areas: program planning, implementation, promotion and evaluation, oral and written communication, collaboration and networking. Prerequisite: HWM 460, HWM 470, HWM 480, and HWM 493. Consent of department. Offered Fall, Spring, Summer.

HWM 496 Cr.3

Health and Wellness Management Capstone

This course requires the application of knowledge and skills acquired through successful completion of all HWM courses taken prior to or concurrent with this course. Using a case study, students demonstrate competence in health and wellness management by completing assignments and participating in discussions that results in the logical, sequential building of a strategic plan for a comprehensive corporate wellness program. Students demonstrate interviewing, professional networking and resume writing skills along with formally presenting their final strategic plan. Prerequisite: HWM 460, HWM 470, HWM 480. Consent of department. Offered Fall, Spring, Summer.

Health Education (HED) - Courses

Courses

+HED 207 Cr.3

Youth Health Issues

This exploratory course is designed to identify the health issues that affect youth throughout various stages of their development. Societal institutions that support the healthy growth and development of youth will be identified, while students consider strategies that enable the healthy mental/emotional, physical, and social development of today's youth between the ages of 4-18. Offered Fall, Spring.

HED 210 Cr.3

Foundations of Health Education

This course explores introductory concepts related to the field of health education. Basic principles, philosophies, and issues related to health education are presented. In addition, health education as a career option is examined and the role of the health educator in numerous settings discussed. Offered Fall, Spring.

HED 320 Cr.3

The U.S. Health Care System

This course provides an overview and a developmental summary of the U.S. health care system and its driving forces and offers comparisons to other national health systems. Content includes major elements of the health care system and a consideration of today's major health policy issues in a historical, economic, and political context. The course will also explore current issues confronting the health care system, raise important concerns and questions related to the different approaches to health care delivery, and identify key ethical issues. Offered Fall, Spring.

HED 345 Cr.3

Issues in Mental and Emotional Health

This course examines the determinants of emotional and mental health which form a basis for health and healthy choices. A variety of constructs including, but not limited to resiliency, family and social processes, self-concept and learning that form the foundation for emotional and mental health will be presented and discussed. Students will be encouraged to deepen their commitment to effective teaching and learning. Prerequisite: HED 210 or admitted to EC-MC or MC-EA Certification. Offered Fall, Spring.

HED 409/509 Cr.1

Stress Management and Relaxation Skills

An introduction to the detrimental effects of stress on an individual and the corresponding benefits of regular relaxation. This course will emphasize the basic skills of relaxation and will provide an experience that focuses on the practical application of these skills in one's life. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: junior standing. Offered Fall, Spring.

HED 412 Cr.3

Women's Health Issues

This course will provide an opportunity for participants to identify major health issues confronting women today and to examine appropriate health prevention and health promotion lifestyle choices. It will explore health issues from the traditional medical model to the holistic model and provide a comprehensive overview of critical, contemporary women's health issues. Prerequisite: junior standing. Offered Occasionally.

HED 425/525 Cr.3

Violence and Injury Prevention

Participants will review the major forces leading to violent behavior and injury in the United States and globally. Trends over time will be carefully reviewed and analyzed in order to detect risk and protective factors. Violence and injury prevention strategies will be reviewed, resulting in the development of prevention and intervention proposals using community-based programming and curriculum development strategies. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: junior standing. Offered Fall, Spring.

HED 467/567 Cr.1-2

Experiential Learning Strategies for Health Education

This course examines emerging educational processes, strategies, and issues and how they can be applied in the facilitation of health education and health promotion programs in the school and/or community setting. Topics will vary per offering and target audience. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: HED 210 or teacher certification; junior standing. Offered Occasionally.

HED 469/569 Cr.3

Drugs, Society, and Human Behavior

This course is directed at introducing social, psychological, pharmacological, and cultural aspects of drug use, misuse, and abuse. In addition, the methods, materials, and theories of drug abuse prevention in the school and community will be introduced. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: BIO 100 or BIO 105; junior standing. Offered Spring.

HED 471/571 Cr.2

Health Education Responsibilities, Competencies, and Certification

Participants will have the opportunity to review the National Health Educator Competencies Update Project research resulting in a new hierarchical model that serves as a framework for the responsibilities and competencies comprising the Entry, Advanced 1, and Advanced 2 levels. Each one of the seven responsibilities will be examined with practitioner examples, and a review will be conducted for the Certified Health Education Specialist (CHES) national examination. Weekend and online formats. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: junior standing. Offered Occasionally.

HED 472/572 Cr.3

Sexual Health Promotion

A review of current information on health and human sexuality. Emphasis is given to biological, psychosocial and educational aspects of human sexuality with special emphasis on instructional activities related to interpersonal communication, decision-making ability and clarification of values. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: ESS 205 or BIO 312; ESS 206 or BIO 313; or admitted to EC-MC or MC-EA Certification; and junior standing. Offered Fall, Spring.

HED 473/573 Cr.3

Health Aspects of Aging

An exploration of the lifelong aging process and an examination of health factors affecting the elderly. Emphasis is given to the changes in a variety of health areas including, but not limited to, physical activity, nutrition, mental health, long-term care, sexuality, and death, dying and grief. The course will also include a service-learning component. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: junior standing. Offered Fall, Spring.

HED 474/574 Cr.3

Nutrition Education

Basic principles of nutrition are covered as well as current problems and topics regarding both personal and world nutrition today. Designed for the public school teacher, the community health educator, or those in related fields. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: junior standing. Offered Fall, Spring.

HED 495/595 Cr.1-3

Independent Study in Health Education

Individualized study of areas not available in existing courses. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit - maximum six. Prerequisite: junior standing. Consent of department. Offered Fall, Winter, Spring, Summer.

Health Information Management and Technology (HIMT) - Courses

Courses

HIMT 301 Cr.3

Digital Literacy in Healthcare

This course provides an overview of medical clinical workflow with emphasis on inter-professional electronic documentation and functionalities of the electronic health record (EHR). Through hands-on experience, this course advances the students' understanding of the electronic health record, health IT policies, data and database management systems in support of the EHR. Consent of department. Offered Fall, Spring.

HIMT 310 Cr.3

Healthcare Systems and Organizations

This course provides an overview of how healthcare and public health are organized and how their services are delivered in the United States. Topics to be covered include public policy (including U.S. health reform initiatives); organization of healthcare systems; components and operation of healthcare organizations including e-health delivery; professional roles and accreditation; legal and regulatory issues, including licensure requirements. Consent of department. Offered Fall, Spring.

HIMT 320 Cr.3

Survey of Information Technology in Healthcare

In this course essential information technologies in healthcare (HITs) will be surveyed. Many important healthcare information systems (HISs) are built upon three categories of HITs: data processing technologies, information reporting technologies, and decision supporting technologies. Specific subjects pertaining to these technologies will be identified and introduced. Consent of department. Offered Fall, Spring.

HIMT 330 Cr.3

Healthcare I: Terminology and Body Systems

This course will examine specific terminology and vocabulary used by healthcare providers and support staff. The focus of this course is on medical terminology which covers human anatomy and physiology, body systems, and diagnoses and procedures. The structure of medical terms will be examined - such as prefixes, suffixes, roots, and combined forms. Topics will also include healthcare taxonomies and nomenclatures (ICD-9-CM, ICD-10, etc.). Prerequisite: UW Colleges BIO 101 Concepts of Biology or equivalent. Consent of department. Offered Fall, Spring.

HIMT 340 Cr.3

Ethical Issues, Security Management and Compliance

This course introduces three broad subjects: 1) evidence-based medical ethics pertaining to healthcare information management; 2) framework of healthcare information security management including security principles, policies and procedures, security management models, risk assessment, and protection mechanisms; and 3) healthcare regulations and compliance with focuses on the legislative systems, policies, and legal environment of healthcare in the US and the existing health information laws, regulations and standards. Also addressed are the elements and development of compliance programs. Prerequisite: Students cannot earn credit in both HIMT 340 and IS 340. Consent of department. Offered Fall, Spring.

HIMT 345 Cr.3

Programming for HIMT Professionals

Fundamental concepts of programming using a contemporary data analysis language. Topics include variables, conditional execution, functions and methods, iteration, strings, files, and data structures. Applications will be taken from the Healthcare Information Systems. Prerequisite: HIMT 300 or concurrent enrollment. Consent of department. Offered Fall, Spring.

HIMT 350 Cr.3

Statistics for Healthcare

This is an introductory course in statistical methods for the health sciences. The course will emphasize the principles of statistical reasoning, underlying assumptions, hypothesis testing, and careful interpretation of results. Some topics covered: major study designs, descriptive statistics, graphical displays of data, probability, confidence intervals and tests for means, differences of means, sample size and power, differences of proportions, chi-square tests for categorical variables, regression, multiple regression, and non-parametric statistics. Prerequisite: UW Colleges MAT 105 Introduction to College Algebra or equivalent. Consent of department. Offered Fall, Spring.

HIMT 355 Cr.3

Principles of Management for HIMT Professionals

This course provides an overview of basic principles involved in management and communication. Topics include basic management principles, communication skills, interpersonal communication competence, negotiation technique, team/consensus building, professional development, and problem solving/decision-making processes. Consent of department. Offered Fall, Spring.

HIMT 360 Cr.3

Healthcare II: Survey of Disease and Treatments

This course further investigates the topics covered in HIMT 330 Healthcare I. On the basis of each body system, the course will further expand into the topics of human disease, human health issues, and classification of disease/health issues, including diagnostics, treatment, and clinical procedures that are currently in practice. In addition, the course will incorporate pharmacotherapeutic concepts (drugs and therapies to treat/prevent/control human disease/health issues), investigating the variety of drugs used for disease treatment for each body system. This will include the current biologicals that are used for treatment. Topics will include how the drugs and biological work, their limitations, and the current diversity of available drugs and biologicals. Prerequisite: HIMT 330. Consent of department. Offered Fall, Spring.

HIMT 365 Cr.3

Healthcare Economics

Applications of microeconomic theory to analyze the behavior or health and healthcare markets. Topics will include: supply and demand of healthcare services, private health insurance markets, government provision of healthcare services and health insurance, and healthcare policy. Consent of department. Offered Fall, Spring.

HIMT 370 Cr.3

Healthcare Systems: Analysis and Design

This is the first course in a two-course sequence that addresses methods and techniques of healthcare information system (IS) analysis and design as performed within the system development life cycle. Included will be the definition of the problem, fact gathering, analysis, logical design, selection and evaluation of alternative healthcare information systems solutions from the point of view of the health provider and user. The course focuses on the problem solving process that leads to the development of logical IS solutions to applied healthcare programs. Prerequisite: HIMT 300. Students cannot earn credit in both HIMT 370 and IS 370. Consent of department. Offered Fall, Spring.

HIMT 375 Cr.3

Database Structures and Management Systems

Analyze and design databases to support computer-based information systems. Develop and implement relational database management systems using SQL. Topics include: data modeling techniques such as entity-relationship modeling, extended entity-relationship modeling, database constraints, database normalization techniques, and basic and advanced features of database query language SQL, etc. Prerequisite: HIMT 345. Consent of department. Offered Fall, Spring.

HIMT 380 Cr.3

Healthcare Billing, Coding, and Reimbursement

This course examines the coding and reimbursement connection; topics include managed care plans, prospective payment systems, Medicare-Medicaid reimbursement, Resource-Based Relative Value Scale, case mix management, and revenue cycle management. Prerequisite: HIMT 330; HIMT 360. Consent of department. Offered Fall, Spring.

HIMT 400 Cr.3

Healthcare Information and Technology: Data

This course explores the sources and data contents of healthcare information as well as the proper presentation of it for different usage levels. Topics addressed include: (1) data structure and use of health information (individual, comparative and aggregate), (2) type and content of health record, (3) data quality assessment, (4) secondary data sources, (5) healthcare data sets, (6) health information archival systems, and (7) National Healthcare Information Infrastructure (NHII). The course will also cover topics in bioinformatics. Prerequisite: HIMT 360. Consent of department. Offered Fall, Spring.

HIMT 410 Cr.3

Healthcare Systems: Implementation and Integration

Covers the back-end stages of healthcare systems development life cycle through the procurement route: development of technical design specifications, procurement procedures (RFP, RFQ, vendor evaluation and selection, and contracting), systems configuration and integration, installation, conversion, operation, and maintenance. Pre-installation testing and post-conversion auditing and monitoring will be emphasized to address the upcoming requirements of federal certification of EHR systems. Prerequisite: HIMT 300; HIMT 370. Consent of department. Offered Fall, Spring.

HIMT 415 Cr.3

Human Resource Management in Healthcare

This course examines the role of HIM professional in managing human resources to facilitate staff recruitment, retention, and supervision. Consent of department. Offered Fall, Spring.

HIMT 420 Cr.3

Healthcare Systems: Project Management

This course addresses the phenomenal impact information system (IS) projects have had on healthcare delivery. Students learn how IS healthcare projects affect organizations, doctors, patients, and chronic-illness treatments, as well as individuals interested in managing their own healthcare. Concepts and tools for IS healthcare project management, process reengineering and work redesign are introduced. The purpose of this course is to expose students to IS project management activities in healthcare settings. Topics covered include recent IS healthcare project trends, budgeting, scheduling, resource management, scope, risk analysis, and deployment controls. The genesis of healthcare project management is covered using specific cases and examples. Consent of department. Offered Fall, Spring.

HIMT 425 Cr.3

Data Warehousing and Mining

Examine the concept of the data warehouse and its effectiveness in supporting strategic decision making. Address the process of creating data warehouse/data-mart solutions from the identification of the enterprise informational and analytical needs to producing business intelligence by extracting information from the data warehouse by using data mining methods and models. Prerequisite: HIMT 375. Consent of department. Offered Fall, Spring.

HIMT 430 Cr.3

Quality Assessment and Improvement

This course examines the quality assessment and quality improvement cycle (plan, do, check, act) and the role of the HIT/HIM professional in the process. Tools used in quality and risk management processes will be examined. Prerequisite: HIMT 350. Consent of department. Offered Fall, Spring.

HIMT 435 Cr.3

Data Communications and Computer Networks in Healthcare

This course provides fundamentals of data communications and networking techniques, and examines the linkage of information technology strategies and technological solutions enabling effective communication within and between healthcare organizations. Major topics include fundamental concepts of data communications and applications, network communication devices, basic technologies of the Local Area Network, Wireless Local Area Network, Wide Area Network, Internet and the Web, the OSI stack, healthcare information system standards, and the HIE, RHIN, and the NHIN. Prerequisite: HIMT 300. Consent of department. Offered Fall, Spring.

HIMT 440 Cr.3

Group Processes, Team Building, and Leadership

This course introduces students to the necessary group/team processes that are at the root of building, developing, and maintaining medical/healthcare work teams and the effective functioning of such teams. The course also provides and overview of leadership development techniques. Also included is a focus on the uses of various communication technologies in the team-building and functioning processes. Consent of department. Offered Fall, Spring.

HIMT 445 Cr.3

Application of Leadership and Management in Healthcare Technology

This course assimilates and integrates concepts and applications of management and leadership in healthcare, advancing on the topics covered in HIMT 355, HIMT 365, and HIMT 415. Topics will include strategic leadership concepts, exploring key factors that impact management and planning change management, and critical organizational behaviors for leadership and management, focusing on best practices, organizational accountability, and assessment models. Prerequisite: HIMT 355, HIMT 365, and HIMT 415. Consent of department. Offered Fall, Spring.

HIMT 450 Cr.3

Healthcare Information and Technology: Standards

This course will be an introduction to healthcare information technology standards, including standards and regulations for documentation, and will cover health information standards. The course will also investigate software applications and enterprise architecture in healthcare and public health organizations. Consent of department. Offered Fall, Spring.

HIMT 489 Cr.1

Pre-Capstone

This is a one-credit course that is intended to serve as an orientation for the HIMT 490 Capstone course as well as a credentialing exam preparation course. This course will help students get more comfortable with all that is involved in the capstone experience. HIMT 489 will also help prepare students for the upcoming credentialing exam(s) that they will be sitting for (in particular, the RHIA and CAHIMS exams). To pass the course, students need to meet the deadlines and requirements for submitting milestone documents (deliverables). Pass/Fail grading. Offered Fall, Spring, Summer.

HIMT 490 Cr.3

Capstone Project

This course is the capstone course for both tracks of the Health Information Management and Technology Program. Students are required to find an internship site that is related to healthcare and set up a semester long project from which they can gain hands-on experience in the areas of their concentration. Project set-up will be jointly done by the student, site sponsor, and the faculty of this course, whereas internship supervision will be performed by the project supervisor and the course instructor. Course should be taken in the student's last semester of study. Prerequisite: HIMT 420, HIMT 489. Consent of department. Offered Fall, Spring, Summer.

Health Professions (HP) - Courses

Courses

+HP 105 Cr.3

Analysis of Health, Wellness and Disease for the Health Care Consumer
In our technological world, health research and information is expanding rapidly and has become readily available to consumers. As life-long consumers of this information and health care services, students need to be able to understand the principles on which healthcare is based and to interpret this information in its application to their personal, family and community situations. This course uses an inquiry-based format to consider topics in nutrition, pharmaceuticals, cancer, communicable disease, contraception and sexually transmitted disease, chronic diseases, environmental impacts on health, recreation, fitness, epidemiology, and disease prevention. Offered Fall, Spring.

HP 106 Cr.2

Introduction to Health Related Careers

This course will assist students in determining future academic and career goals while providing them with information regarding many health related professions. Course will include educational and professional aspects of a broad range of health related careers. General topics will include an overview of the healthcare industry, health-related ethical issues, and professionalism. An interdisciplinary approach will be utilized to present specific information on individual health related professions. Lect. 1, Disc. 1. Offered Fall, Spring.

HP 250 Cr.1

Medical Terminology for Health Professions

Students in various allied health fields will learn to use medically related terms in their professional communication. This covers the study of the language of medicine used in clinics, hospitals, and other health agencies. The student will develop a working knowledge of terms, word roots, and abbreviations with emphasis on spelling, definitions, and pronunciation. An introduction to health care records, disease process, operative, diagnostic, therapeutic, and symptomatic terminology of body systems will be covered as they pertain to medical practice. Online course. Offered Fall, Spring, Summer.

HP 310 Cr.4

Pathophysiology

This course focuses on the pathophysiologic disorders that affect healthy systems across the life span. Theories of disease causation are introduced. Areas of emphasis include cellular and systemic responses, clinical manifestations and the response of tissue to radiation damage. Acquired, immune, infectious, carcinogenic and genetic alterations in body systems are included. Prerequisite: BIO 312; BIO 313 (may be taken concurrently); admission to NMT or RAD program. Offered Fall.

HP 499 Cr.1-3

Health Professions Research

This course will allow practical experience in carrying out a clinical research project in the health professions under the guidance of the principal investigator(s). Students will be required to search and critique the literature concerning the research problem, collect, analyze and manage data, assist with statistical analysis and writing of reports. Repeatable for credit - maximum four. Offered Fall, Spring.

Health, Physical Education, and Recreation (HPR) - Courses

Courses

+HPR 105 Cr.3

Creating A Healthy, Active Lifestyle

This course will focus on the knowledge and skills necessary for developing and maintaining a healthy, physically active lifestyle throughout one's lifespan. Major issues directly affecting one's health such as physical fitness, movement skills and activities, health promotion and disease prevention, the effective use of leisure and content in various wellness topical areas will be included. Offered Fall, Spring, Summer.

History (HIS) - Courses

Courses

+HIS 110 Cr.3

World History

This course examines world history using a specific theme. The course is global in scope from ancient times to the present and covers a minimum of three civilizations. Instructors trace the development of one theme over multiple historical periods and places in the world. Offered Fall, Spring, Summer.

HIS 200 Cr.3

Historiography and Historical Methods

This course is an introduction to historiography (the history of the study of history) and historical research methods. In addition to introducing students to historiography, the course also introduces students to historical research methods, use of primary sources, problems of interpretation, and composition. Prerequisite: open to history majors and minors only. Offered Fall, Spring.

+HIS 202 Cr.3

Contemporary Global Issues

This course will offer a contemporary multi-disciplinary perspective regarding the major issues and trends confronting the global society as it enters the 21st century. Emphasis will be given to a critical review and assessment of the origin and present condition of the plethora of situations and problems affecting modern global society. The student will also learn to critically evaluate current and future events. The course will incorporate the views and approaches of the following disciplines: sociology/anthropology, economics, geography, political science, and history. Students may only earn credit in one of the following: ANT 202, GEO 202, HIS 202, POL 202, SOC 202. Offered Spring.

+HIS 205 Cr.3

Ethics and Religion

This course is a comparative historical survey of selected religions which focuses upon the distinctive ways that each religion developed norms of good and bad behavior that it imposed upon its adherents. What behaviors did each religious tradition label as good or bad, pure or impure? Why did each tradition place behaviors in those categories? How did those value judgments concerning good and bad behaviors change over the centuries? Some of the topics covered in this comparative historical fashion will include the treatment of women, attitudes toward abortion, contraception, sex outside of marriage, homosexuality, war, attitudes towards other religions, and environmental ethics. Offered Spring.

HIS 210 Cr.3

Survey of the United States

This course examines United States history from the period of the revolution to the present. It focuses on the development and reform of American politics, the evolution of American society and culture, and the place of the United States in the world. Offered Annually.

HIS 220 Cr.3

Survey of Latin American and Latino History

This course is an introduction to Latin American and U.S. Latino history. The course surveys how conquest, conversion, colonialism, nationalism, neocolonialism, and immigration affected Iberian cultures in the Americas and Europe from 1300 to 2000. Iberian colonialism initiated processes of Catholic conversion, labor exploitation, and cultural syncretism that continued into the 19th century, complicated by the development of U.S. and European informal empire in Latin America. Liberal oligarchies oversaw uneven development that led to social and political revolutions, and the development of feminism and modern homosexuality. U.S. intervention in the political, social, and economic affairs of Latin America destabilized the region, prompted dictatorships and "dirty wars," and initiated migratory currents that expanded Latino populations in the U.S. The Mexican American and Puerto Rican experiences are surveyed. The course examines how hierarchies grounded in notions of race, class, gender, and sexuality have impacted the lives of people throughout the Americas. Offered Every Third Semester.

HIS 230 Cr.3

Survey of Ancient and Medieval Worlds

An historical survey of the civilizations of West Asia, North Africa, and Europe from the advent of urbanization in 4000 BC to the beginning of the Renaissance (ca. 1300 AD). Topics discussed will be the nature and status of women, ethnic and religious minorities, the importance of geography and technology. Special emphasis will be placed on studying historical themes that have survived to the present day. Offered Spring.

HIS 240 Cr.3

Survey of Modern Europe

This course will consider the forces of nationalism, liberalism, imperialism, and totalitarianism, as well as Europe's interaction with non-western cultures, the two world wars and the Cold War. Upon completion of the course, the students will be able to place this period of European history within the context of global history. Offered Annually.

HIS 250 Cr.3

Survey of Asia

This course will introduce students to various aspects of Asian history with special focus on the Modern period (post-1800). In particular, it will compare the political, social and economic structures as well as the religious/philosophical underpinnings of Asian countries, including China, Japan, Korea, Vietnam, India and Indonesia. Offered Fall - Odd Numbered Years.

HIS 260 Cr.3

Survey of the Middle East

This course is an introductory course designed for students who would like to understand better the history and cultures of the Middle East but who have had little exposure to the region or even to the study of history. It covers the political, social, cultural, and economic Middle East from the rise of Islam to the present. We will select several major themes: the message of Islam, the development of Islamic civilization, Ottoman and Iranian cultures, responses to European imperialism, and nationalist and religious movements. Credits generated in this course apply as electives in the major or minor. Offered Annually.

HIS 280 Cr.3

Survey of the History of Modern Science

Science may seem sterile and remote from everyday life, something that takes place in a laboratory, something unaffected by the social, cultural, and political world around it - in short, something unaffected by history. Yet our modern concept of science, its ideals, and the way it is practiced all have their own history, and this is intricately related to the history of the broader world. In order to understand this relationship, this course will explore changing historical conceptions of what it means to do science, where it can be done, who gets to participate, what ethical considerations should govern its conduct, and even what kinds of questions science can answer. We will consider human beings as students and practitioners of science, but also as subjects of scientific inquiry. While we will consider science around the world, our focus will be on science in the West. We cannot possibly consider every place, space, and discipline of science in one semester, but we will consider a variety of case studies, and you will have the opportunity to supplement our work with your own research. Our goal is to better understand the history that led to our image of modern science, but also to develop ideas about how to make science more democratic - and why it's so important for us to do so. Offered Occasionally.

HIS 285 Cr.3

Survey of Modern Africa

This survey course is designed to introduce students to modern African history, from roughly 1800 through the 1970s. It gives a broad overview of African societies as they changed in the face of profound transformations like the trans-Atlantic slave trade, colonialism, independence, and globalization. Offered Annually.

HIS/ARC 295 Cr.3

Pyramids, Temples and Towns! The Archaeology of Ancient Egypt

This course is a survey of the archaeology of Ancient Egyptian civilization from an anthropological perspective and examines the Neolithic through Roman periods, ca. 5000 BC - AD 285. In this course, we will investigate the rise and development of Egyptian culture by examining selected archaeological sites and the material remains left behind by the ancient Egyptians. Using these materials, we will address specific topics of Ancient Egyptian civilization including the formation of the centralized state, sacred vs secular space, royal and private mortuary practices, urbanism, religion, roles of women in society, everyday life, history of Egyptian archaeology, recent discoveries, and future directions in the archaeology of Egypt. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Every Third Semester.

HIS 300 Cr.1-3

Topics in History

Topics selected by the individual instructor or by the students and instructor together. Special interests of both the bases of current world crises or areas of historical concern not covered in formal course work, may be the vehicles for this offering. Credits generated in this course apply as electives in the major or minor. Repeatable for credit - maximum 18. Offered Annually.

HIS/RGS 301 Cr.3

Women and Gender in the Modern United States: 1890-Present

This course introduces students to key developments in the history of women and gender in the modern period of U.S. history. It explores the diversity of women's experiences and gender constructs in relation to work, activism, citizenship, family life, and demographic changes, and cultural changes. (Cross-listed with HIS/RGS; may only earn credit in one department.) Offered Alternate Years.

HIS/ARC 302 Cr.3

Egyptian Hieroglyphs: The Language and Culture of Ancient Egypt

Ever wonder what all those birds, snakes and other symbols on Ancient Egyptian monuments mean? In this course you will find out! This course is an introduction to the language and culture of Ancient Egypt. We will learn to read the hieroglyphic script used by the Egyptians to record aspects of their culture and daily lives for over 3,000 years. While learning the basics of Middle Egyptian grammar, the classical form of the language, we will explore aspects of Egyptian culture through their own words. Through translating sentences and basic texts, we will experience first-hand the classical form of the language used for writing everything from business receipts and letters, to historical documents and literary works, to esoteric theological texts which record details of their belief system. Topics to be covered are the origins of writing in Egypt, historical development of the language, daily religion, beliefs in the afterlife, the family, social structure, literature and the role of writing in Egyptian culture. From students of archaeology or linguistics, history or modern languages, or anyone who has ever seen an artifact from Ancient Egypt and wanted to know what the hieroglyphs say, this class has something for everyone! No prior knowledge of ancient Egypt or Egyptian language is needed or required, only a desire to gain insight into the thoughts of people who lived thousands of years ago. Offered Occasionally.

HIS 303 Cr.3

Money and Crime

Money and crime are just ideas. We will ask what makes something money? When, why, and where did money start and how has it changed? We will also examine crimes based on money such as counterfeiting, embezzlement, forgery, fraud, identity theft, money laundering, and swindling. We will study how money and its related crimes have become a system that shapes us and how different people around the world experience this system. Offered Alternate Years.

HIS 304 Cr.2

Schools and Learning in Social Studies and Field Experience I

This course will be integrated with a field experience for secondary social studies teachers and provide a forum for students to consider both the theories and practices of teaching. A significant portion of this course will be dedicated to collaborative reflection and discussion of teacher candidates' experiences in their field placements. Teacher candidates will design, enact, and assess activities to enhance student learning. Teacher candidates will work together to create a collegial and supportive community of educators. Assignments are designed to support reflective practice and to critically analyze teacher candidates' development as educators. A multi-day, consistent schedule in the middle school field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203, EDS 206; admission to teacher education. Consent of department. Offered Fall, Spring.

HIS/RGS 305 Cr.3

History of Motherhood in the United States

This course considers motherhood in nineteenth and twentieth century United States history from a variety of perspectives. It explores women's experiences as mothers, across lines of class, race, and relationship status. It also examines the politics of motherhood in US history, and considers both the restrictive and the empowering dimensions of ideologies of motherhood. (Cross-listed with HIS/RGS; may only earn credit in one department.) Offered Alternate Years.

+HIS 306 Cr.3

Ethnic America

The role and impact of immigrants and ethnic minorities on the political, economic and cultural development of the United States from colonial times to the present. Emphasis on the immigrant experience - the problems of immigrant adjustment, patterns of immigrant mobility and assimilation, and the persistence of ethnicity and ethnic tensions. Offered Alternate Years.

HIS 307 Cr.3

Comic Books and History

This course examines how transregional historical events and experiences have been depicted in comic books, manga, graphic histories, and works of illustrated journalism. Focusing on how history is represented in these visual sources helps us understand the complexity of human memory, identity, and agency. As we investigate these issues, we will also investigate the historical contexts shaping primary source creation and track change and continuity over time. Offered Alternate Years.

HIS 308 Cr.3

U.S. Reform Movements

An exploration of moral and political reform and the reform impulse in the United States. Reform topics will include women's rights, antislavery, civil rights, temperance, populism, social and economic justice, and progressivism. Offered Occasionally.

HIS 309 Cr.3

History of U.S. Science and Technology

This course explores the various ways in which Americans have encountered, developed, and experienced science and technology from the colonial period to the present using various lenses - politics, environment, military, labor, culture, race, gender, and others. Offered Occasionally.

HIS 310 Cr.3

Native American History

This course is a survey of Native American history in North America from the prehistoric era through the twentieth century, with an emphasis on the United States. This course will focus on Native American cultural, political, and economic structures, as well as patterns and strategies of coexistence with and resistance to European and European American communities. Offered Spring - Every Third Year.

HIS 311 Cr.3

Peace and War

An examination of the causes, consequences and nature of both war and peace in a global context. This course will consider war and peace throughout history and within various cultures. Offered Fall - Every Third Year.

HIS/ANT 312 Cr.3

Peoples and Cultures of Eastern Europe and the Former Soviet Union

This is a survey course that explores how people in Eastern Europe and the former Soviet Union have experienced the transition from socialism to postsocialism and beyond. Within the framework of cultural anthropology, we will examine the major concerns of postsocialism - including how people understand the role of the government, what is means to be a citizen, and how they view themselves as members of communities - in order to gain a better understanding of how people experience, manage, and challenge the broad changes that have occurred in the political, economic, and social systems. More importantly, we will focus on how people have redefined what they value in life, what it means to be a "good" person, and what it means to be "postsocialist" in light of these changes. (Cross-listed with ANT/HIS; may only earn credit in one department.) Offered Occasionally.

HIS 313 Cr.3

Colonial and Revolutionary America

A history of the founding and development of North American colonies and the era of the American Revolution, with special attention devoted to the establishment and evolution of Euro-American culture and the creation and maturation of American politics. Offered Occasionally.

HIS 314 Cr.3

The Holocaust

This course is designed to introduce students to the Holocaust from the perspective of historians, writers, and poets. Careful study using historical methods will inform our understanding of the "historical actors" and their motivations. Critical thinking about the complex causes can help us see that historical events are not inevitable, but the product of decisions and actions taken by people. Offered Spring - Even Numbered Years.

HIS 316 Cr.3

Vietnam War

The history of the Vietnamese civil war with focus on US involvement. It will examine Vietnam's anti-colonial revolution; trace developing American foreign policy from Truman forward; analyze military developments; and study consequences of the war in both the United States and Vietnam. Offered Occasionally.

HIS 317 Cr.3

American Environmental History

This course studies human societies and their changing relationships with their physical and natural surroundings. The focus is on the environmental history of North America from pre-Columbian times to the present. Topics explored may include the Columbian exchange, evolving concepts of humanity's relationship to nature, the development of a market economy, science and technology, government roles in conservation and preservation, and the recent emergence of an environmental movement. Offered Occasionally.

HIS 318 Cr.3

Exhibition Development and Design I

Course surveys best practices in exhibit design and development through practicum that exposes students to concept development, special planning, production, and installation on a budget. Field trips and work with the local institutions will be an important aspect of this course. Topics include: oral history, museums in the community, museum organization, exhibition planning and design, care of artifacts and collections, and the visitor experience. Offered Spring - Every Third Year.

HIS 319 Cr.3

Seminar in Twentieth Century America

Advanced seminar in the social, economic, political and diplomatic history of contemporary America from the 1890s to the present. Major topics may include the development of the modern bureaucratic corporate state, the rise of US power and its international effects, and the roles of women and social and ethnic minorities in the 20th century. Includes intensive and extensive reading of historiography and historical monographs. Offered Occasionally.

HIS 320 Cr.3

Introduction to Public and Policy History

An introduction to public and policy history. Class time will be devoted to the background, methods and application of public and policy history. The class will cover topics in cultural resource management, public policy, or museum exhibits. Offered Fall.

HIS 321 Cr.3

Wisconsin History

An exploration of the history of Wisconsin, focusing on place, people, and the development of regional culture. Special emphasis will be given to environment, native peoples, ethnicity, the Progressive transformation of state politics, and community from the territorial period to the recent past. Offered Spring - Even Numbered Years.

HIS 322 Cr.3

Public Education in Wisconsin and America

An investigation into historical changes marking K-12 public education in the United States beginning with the legacy of Puritan culture and colonial antecedents, and concluding with historical perspectives on the nature of public schooling and the role of the federal government in education policy today. Particular attention will be paid toward Wisconsin's system of public education as a reflection of state history, as well as local and national trends. Among the other major topics addressed are: the purposes of schooling, the ideas of major educational reformers, struggles over school curriculum, religion and public education, the origins of standardized testing, the emergence of teacher unions, urban and rural school challenges, and school privatization. Offered Spring - Odd Numbered Years.

HIS 323 Cr.3

World War II

This course focuses on World War II, its causes, its conduct and its consequences. It will examine the war from a global perspective, exploring all of its aspects - political, diplomatic, military and civilian - in the broad context of national differences, rivalries and conflicts extending from World War I and The Treaty of Versailles (1919) into the third quarter of the twentieth century. Offered Fall - Every Third Year.

HIS 324 Cr.3

Civil War and Reconstruction

A study of US History from 1820 to 1877 with an emphasis on the Civil War and Reconstruction and the political, economic, and social implications for the United States. Offered Occasionally.

HIS 325 Cr.3

America in the Cold War

The United States spent almost half of the twentieth century engaged in a hostile confrontation with the Soviet Union. This course will explore the origins of the Cold War from its development in 1945 to the collapse of the Soviet Union in 1991. It will study the economic and ideological conflicts between the two countries, as well as explaining the effects of the Cold War on U.S. domestic politics and culture. Offered Occasionally.

HIS 326 Cr.3

Modern Christianity

This course surveys the history of Christianity from the beginning of the Protestant Reformation until the present. Offered Alternate Years.

HIS 327 Cr.3

History of Buddhism

A survey of the historical development of the Buddhist religion - its doctrines, practices, and institutions - from its origins through the 20th century. This course will analyze how Buddhism first evolved in India and focus upon the distinctive ways that it developed in Southeast Asia, Tibet, China, and Japan. Offered Alternate Years.

HIS 328 Cr.3

History of Hinduism

A survey of the historical development of the Hindu religion from its origins in the early Vedic period through the 20th century. Some of the topics covered include the evolution of the belief of reincarnation, the development and significance of the caste system, the development of Hindu attitudes toward women, and the evolution of the principal Hindu gods and goddesses. Offered Alternate Years.

HIS 329 Cr.3

History of Islam

A survey of the historical development of Islam from its origins through the present day. It will also analyze the central beliefs, practices, and institutions of Muslims. Special attention will be given to the situations of women in the Islamic world. Offered Alternate Years.

HIS 330 Cr.3

History of Religions

This course will be a historical and broadly comparative study of religion, religions, and religious phenomena. First, it will incorporate a cross-cultural study of such phenomena as myth, ritual, sacred places, gods and goddesses, mysticism, and the various forms of religious community and authority. Second, it will also trace the historical development of the scholarly study of comparative religion. Finally, it will focus on the historical evolution of a particular religious phenomenon through many centuries, i.e., the historical evolution of the devil and the concept of hell in the Old Testament and Christianity. Offered Alternate Years.

HIS/ARC 331 Cr.3

The Ancient Greek World

A historical and archaeological survey of the ancient Greek world (Greece proper, the Aegean Islands, southern Italy, western Turkey). Periods discussed will include Cretan (Minoan), Mycenaean, Archaic, Classical, Hellenistic, and Early Greek Christian. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

HIS/ARC 332 Cr.3

Ancient Rome and the Mediterranean

A historical and archaeological survey of the ancient Mediterranean area (with emphasis on the Italian peninsula) from the founding of the city of Rome to the collapse of the western Roman Empire in the fifth century ACE. Periods discussed will include: Italy in the Neolithic period, the founding of Rome, Etruscan Domination, the Roman Republic, the Roman Principate/Empire, and the advent of Roman Christianity. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

HIS 333 Cr.3

Christianity to 1517

This course surveys the history of Christianity from its origin up to the beginning of the Protestant Reformation in 1517. Topics to be covered will include the following: question of the reliability of the Gospels as historical sources, early heresies, Christological and Trinitarian controversies, the conversion of Western and Eastern Europe during the Middle Ages, the evolution of the papacy and monasticism, the Crusades, and the status and treatment of women in ancient and medieval Christianity. Offered Alternate Years.

HIS 334 Cr.3

Themes in Chinese History

Each semester this course will examine a specific aspect of the history of China from earliest times to the present. Included will be the Chinese family; the role of ideology in Chinese history (Confucianism, communism, etc.); the revolutionary period (1800-1949); and China since 1949. Offered Alternate Years.

HIS 335 Cr.3

History of China

A survey of the history of China from earliest times to the present. Included are the study of traditional China, the impact of western civilization on that traditional society, and the rise of communism. Offered Alternate Years.

+HIS 336 Cr.3

Latinos in the United States: 1450-2000

This course will introduce students to the diverse experiences of Hispanic peoples in the United States through an interdisciplinary survey of their social, historical, political, economic, and cultural experiences. Focus on Mexican American/Chicano, Puerto Rican, Dominican, Cuban, and Central American experiences. Offered Alternate Years.

HIS 337 Cr.3

La Crosse Wisconsin in World History

This course explores the connections between La Crosse, WI and the wider world (1840s-present). At a regional scale, we will investigate how the story of La Crosse's origins and expansion fits into the broader history of the state of Wisconsin, the Mississippi River Valley, and the Midwest. At a global scale, we will connect La Crosse and Wisconsin's story to long-distance and long-time frame processes including: long-distance migration, industrialization, warfare (WWI, WWII, Cold War), and demands for social and economic reform (the Progressive Era, the Civil Rights movement, and the student protest movement). Offered Fall - Odd Numbered Years.

HIS 338 Cr.3

Sugar, Coffee, Rubber, Bananas: Commodities in World History

This course examines the history of everyday commodities that we consume or use, often without considering where they came from (sugar, coffee, rubber, bananas). It centers on the development of plantation-style agriculture in the Americas, Caribbean, Southeast Asia, and Africa from the 1600s-1930s CE. Power relationships between laborers, landowners, colonial governments, and consumers are examined in order to connect trade goods to the historical societies in which they were produced. A particular emphasis is placed on links between European imperialism, labor migration, and inequality. Offered Every Third Semester.

HIS 339 Cr.3

Russia and the Soviet Union

The origins and development of the Russian state from Kievan Rus through the collapse of the Soviet Union. This course will also examine the global impact of Russian interaction with Asian, Islamic, and Western cultures. Offered Occasionally.

HIS/ARC 340 Cr.3

Origins of Cities

This course examines the origins and development of urban life. Students will first explore, from an anthropological perspective, the character of modern cities. Students will next examine the earliest cities in the Old and New Worlds, and comparatively explore the varied ecological, social, political, and demographic processes associated with urbanization in various ancient civilizations (Mesopotamia, Egypt, Indus Valley, China, Andes, and Mesoamerica). While the focus of this course is on archaeological cities, it draws heavily on ethnographic and sociological studies of urban forms. The purpose of this course is to provide students with a comparative understanding and appreciation of urban life and its long history. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

HIS 341 Cr.3

Nineteenth Century Latin America

Study of the problems of nation-building, regionalism, political instability, economic underdevelopment and social disunity from the Wars of Independence (1810-1825) to the First World War. Offered Alternate Years.

HIS 342 Cr.3

Twentieth Century Latin America

The struggle for economic development, political democracy, and social justice in the period of developing nationalism since World War I. The Non-Hispanic Caribbean is included. Offered Alternate Years.

HIS 344 Cr.3

Latin America: 1450-1830

This course will analyze Iberian and Amerindian societies to understand the establishment and evolution of Hispanic institutions and cultures in Latin America from 1450 until 1830. Offered Alternate Years.

HIS 345 Cr.3

U.S.-Latin American Relations

This course will explore US relations with Spain and the Latin American republics from 1776 to the present day. It will devote careful attention to the economic and political goals of US foreign policy in Latin America and explore how these goals compromised Washington's efforts to forge closer ties with the Latin American nations and have fueled social inequities and dislocation. Themes include diplomacy, Monroe Doctrine, Manifest Destiny, Interventionism, the Good Neighbor Policy, the Alliance for Progress, NAFTA, Human Rights, Pan-Americanism, Hemispheric relations, Latin American relations with Western Europe, and the role of the Roman Catholic Church and NGOs in U.S.-Latin American relations. Offered Occasionally.

HIS 346 Cr.3

The Middle Ages

The emergence and flowering of medieval European civilization - in its political, religious, socio-economic and cultural aspects - from the Germanic invasions to the Renaissance era. This course will also examine the Byzantine and Islamic civilizations; their interaction with the West; and the contributions made by the Muslim and Byzantine peoples to medieval Europe. Offered Alternate Years.

HIS 347 Cr.3

Greater Mexico

This course examines the Mexican experience in the United States as an integral part of Mexican history. Includes a focus on the evolution of Northern Mexico, the rise of the Chicano/Mexican American Civil Rights Movement, and Mexican ethnic enclaves in the U.S. Southwest and Midwest. Offered Occasionally.

HIS 349 Cr.3

Twentieth Century Europe

The emergence of Europe as a political, cultural, social, industrial and military power during the 19th and 20th centuries. This course will also explore European interaction with non-Western cultures, the two world wars, the Cold War, decolonization, the decline of Europe as a premier world power, and the break-up of Eastern Europe and Soviet regimes. Offered Occasionally.

HIS 351 Cr.3

France and the French Empire: 1750-Present

This course is the history of France and its empire since 1750 incorporating major social, intellectual, political, and economic trends in both a domestic and international context. Offered Alternate Years.

HIS 352 Cr.3

Germany: 1848-1989

Development of Germany through wars of unification and emergence as a world power, World War I and Weimar Republic, Nazi rule and World War II, and changes in the post-war Germanys. The "German Catastrophe" of National Socialism and the Holocaust has brought all of German history under the microscope in an effort to figure out what went wrong. Because of the high stakes in understanding and diagnosing the past, the telling of German history has generated an unusually large number of arguments and controversies, some of which we will consider in our discussions. Offered Occasionally.

HIS/ANT/ARC 353 Cr.3

Maya Civilization

The course presents an overview of the Maya culture located in southern Mexico and Central America. The class is organized chronologically into several sections that focus on the origins, adaptations to various environments, social, political, and religious organizations, and the belief systems of the Maya beginning at around 3000 BC. Emphasis will be on Pre-Hispanic Maya; will also explore life ways of contemporary Maya people. (Cross-listed with ANT/ARC/HIS, may only earn credit in one department.) Offered Summer.

HIS 354 Cr.3

Spain to 1700

This course will examine political, religious, socio-economic, and cultural developments from the beginnings of Visigothic rule to the decline of Spain in the seventeenth century. Particular attention will be paid to Muslim and Jewish contributions to Spanish culture, as well as Iberian voyages of exploration and imperial ventures in the "New World. Offered Occasionally.

HIS 356 Cr.3

History of Mexico

Survey of Indian and Hispanic roots of modern Mexico from 1450 to the present. Offered Alternate Years.

HIS 357 Cr.3

Crime and Punishment in America

An introduction to crime and punishment in America from colonial times to the present with an overview of the law and basic institutions of the justice system. The class explores how different groups of people experienced these institutions, how crime patterns and punishment have changed, the differences between crime and violence, different types of crimes (violent, property, white-collar), and why America has the system of justice it does. Course makes extensive use of evidence from inside and outside the justice system including police reports, court records, crime data, program evaluations, newspapers, and popular culture. Offered Alternate Years.

HIS 358 Cr.3

French Revolution

This course covers the French Revolution from a European and global perspective. It will cover the chronology of the Revolution, its political, cultural, social, and economic effects on Europe and the larger world, the experiences of various individuals and groups within it, and its long-term effects both in France and around the world. Offered Occasionally.

HIS 359 Cr.3

Women, Gender and Sexuality in Modern Europe

The course examines changes in ideas about and experiences of gender and sexuality in Europe between 1700 and 2000. Topics emphasized include changing family structures, women's emancipation and feminism, the intersection of race with gender and sexuality, the politics of reproduction, and gender transformation through war and revolution. Offered Alternate Years.

+HIS 360 Cr.3

Women, Gender, and Sexuality in Latin America

The course analyzes historical transformations in Iberia and Latin America and their effects on women's and men's lives and gender relations. The relationship of gender and power will be explored to understand inequalities; themes will include precolonial societies, colonialism, religious change, urban labor, nationalism, sexuality, and homosexual cultures. Offered Occasionally.

HIS 361 Cr.3

Israeli-Palestinian Conflict

This course examines the history of the Israeli-Palestinian conflict, focusing on its origins, the actors involved, and key social and political factors that have shaped it. Offered Occasionally.

HIS 362 Cr.3

Human Rights and the Middle East

This course surveys the historical roots and practice of human rights in the Middle East, focusing primarily on the modern era. Topics include: definitions of vulnerability, minority, and religious rights, human rights violations, and non-governmental organization (NGO) activism. Offered Occasionally.

HIS 363 Cr.3

Modern South Asia

This course examines the history of the Indian subcontinent (a part of the world we today call South Asia) from the eighteenth century to the present day. It studies Indian society in the twilight of the Mughal Empire and the early years of European colonial expansion. Then it spans the social, cultural, political, economic, military, and technological development of India during the presence of the East India Company and, later, the British Raj. Next it traces the rise of competing visions of Indian nationalism and the struggle for independence. Lastly it explores the political, social, and economic developments in the nations of present-day South Asia and their impact on the world. Offered Occasionally.

HIS 364 Cr.3

Gandhi and the World

A dominant figure in India's struggle for independence from British rule, M. K. Gandhi (1869-1948) is also one of twentieth century's most influential political activist and thinker as well as a famous pacifist, who inspired peace and civil rights movements globally. This course charts Gandhi's life and career against events in London, South Africa, and India. It examines the evolution and application of his ideas and techniques of non-violent resistance, and his attitudes toward the economy, society and state. Gandhi's influence on Indian politics and society is critically assessed and his claim to be the "apostle of non-violent revolution" examined against developments since his death in 1948. Prior knowledge of Indian history is not required for this course. Offered Occasionally.

HIS/ARC 365 Cr.3

Ancient Iraq

A historical and archaeological survey of ancient Iraq (Syro-Mesopotamia) from its prehistoric origins in the neolithic period to the Seleucid period. Ethnic groups discussed will include the Sumerians, Akkadians, Babylonians, Assyrians, Kassites, Amorites, Chaldeans, and Elamites. Topics will include the rise of urbanism, cuneiform writing, religion, literature, displaced persons, gender relations, and social structure. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

HIS/ARC 366 Cr.3

Ancient Israel

A historical and archaeological survey of coastal Syria and Palestine from the neolithic period to the Roman conquest. Various ethnic groups discussed will include the Eblaites, Phoenicians, Philistines, Canaanites, Arameans, Israelites, Samaritans, and Judeans. Special emphasis will be placed on putting biblical history in its Palestinian context. Topics will include social structure, gender relations, religion, and literature. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

HIS/ARC 368 Cr.3

History of Babylonian Language and Culture I

This course is a survey of Babylonian history, culture, and language. Babylonian, was the most extensive of the cuneiform languages of the ancient Near East, was the language of the ancient Assyrians and Babylonians and was used for over two millennia. Students will study aspects of the history and culture of ancient Babylonia, as well as learn the fundamentals of Babylonian grammar and syntax, and the cuneiform writing system. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

HIS/ARC 369 Cr.3

History of Babylonian Language and Culture II

This course is a second semester survey of Babylonian history, culture, and language. Babylonian, the most extensive of the cuneiform languages of the ancient Near East, was the language of the ancient Assyrians and Babylonians and was used for over two millennia. Whereas the student studies grammatical forms and is introduced to the cuneiform writing system in the first semester, the student in the second semester will work with documents. Students will study aspects of the history and culture of ancient Babylonia in later periods, as well as read legal, economic, and literary texts in the original language. Prerequisite: HIS 368 or ARC 368. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

HIS/ARC 372 Cr.3

History of Women in the Ancient World

A history of the nature and status of women in the ancient world as derived from textual sources, including works of literature, private letters, economic documents, and tomb inscriptions. Areas studies will be Syro-Mesopotamia, Israel, Iran, Anatolia, Egypt, and the Mediterranean world. Also discussed will be the study of women as derived from archaeological sources. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

HIS 373 Cr.3

World War I

This course will examine World War I from a European and global perspective. It will cover the causes, nature, and results of the war as they relate to the society, economy, politics, and culture of Europe. Attention will also be given to some of the global effects of the war as well as the ways this war transformed the nature of warfare in the 20th century. Offered Alternate Years.

HIS/ARC 374 Cr.3

Ancient Turkey

An historical and archaeological survey of ancient Anatolia (the geographic name of Turkey) and surrounding regions (e.g., Syria and the Caucasus) from its prehistoric origins in the Neolithic period, the rise of urbanism, Assyrian mercantilism, Pre-Hittite cultures, the Hittite kingdoms, the Neo-Hittite states, Urartu, Phrygia, Lydia, Cimmerians, Medes, Persians, and various states in the Graeco-Roman period to the advent of Anatolian Christianity. Topics will include cuneiform writing, religion, literature, law, gender relations, and social structure. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

HIS/ARC 375 Cr.3

Iran before Islam

An historical and archaeological survey of ancient Iran and surrounding regions from prehistoric origins to the advent of Islam in the 7th century AD. Among the topics discussed will be: the rise of urbanism and writing at Proto-Elamite Susa, Elamite civilization in southwestern Iran, Medes, Scythians, and Persians in the Iron Age, the Persian Empire, as well as the Seleucid, Parthian, and Sassanian kingdoms of later antiquity. Emphasis will be on the study of primary sources in translation (Sumerian, Akkadian, Elamite, Old Persian, Greek, Latin, and Hebrew, amongst others). Topics will include cuneiform writing in Iran, religion, literature, gender relations, classical traditions about Iran, and social structure. (Cross-listed with ARC/HIS, may only earn credit in one department.) Offered Occasionally.

HIS 377 Cr.3

U.S. Labor History

This course focuses on the history of the American working-class from the late eighteenth century to the late twentieth century. The course will examine the domestic, cultural, religious, economic, political, and social issues working people faced in the United States. Offered Fall - Odd Numbered Years.

HIS 378 Cr.3

The American West

This course focuses on the history of the Trans-Mississippi West from European contact to the late 20th century, with a focus on the 19th and 20th centuries. Topics covered include the federal West, settlement, immigration, extractive industries, agriculture, aridity, the environment, and Native Americans. Offered Fall - Every Third Year.

HIS 379 Cr.3

African Environmental History

This course examines how African environmental realities and Africans' conceptions of the environment shaped broader political, social and economic histories. It specifically addresses how 19th century economies, colonial policies, and post-independence priorities transformed Africans' relationships with their environments. Offered Occasionally.

HIS 380 Cr.3

The Rwandan Genocide

This course examines recent civil wars and genocide in Africa's Great Lakes as regional and historically-rooted phenomena. Beginning with examination of how ethnic identity related to political structures in the region in the late 18th century, the course traces their dynamic transformations in response to local, regional, colonial, and postcolonial influences. Offered Occasionally.

HIS 381 Cr.3

Health and Healing in African History

This class interrogates how African understandings of health and practices of healing transformed from the pre-colonial through the post-independence periods. In particular, it examines the interrelationship between health and politics in African thought, the integration of western biomedicine into African systems of healing, and the changing disease environment of capitalism, colonialism, and globalization. Offered Occasionally.

HIS 382 Cr.3

Imperialism in Asia and the Pacific

This course focuses on the modern imperialism of the West and Japan in Asia and the Pacific. It will cover the period from the "age of exploration" to the period of decolonization following the Second World War. The course will also analyze forms of what might be called neo-imperialism in Asia and the Pacific following that period. Topics emphasized include theories of imperialism as a constituent element of global modernity, the British Empire in Asia with particular respect to India, relatively informal imperialism in China, French and Dutch colonialism in Southeast Asia, the American takeover of Hawaii and US colonization of the formerly Spanish Philippines, and the rise and fall of the Japanese empire. Offered Occasionally.

HIS 383 Cr.3

Women in South Asia

This course maps the history of women in South Asia. While the primary emphasis will be colonial and post-colonial South Asia, the course will begin with ancient India and trace women's history through the medieval period. We will survey the historical institutions, practices, and traditions that define the position of women. Offered Occasionally.

HIS 384 Cr.3

The Idea of Asia

This course addresses relationships between Asia as a concept originating in the West and modern history. Focuses include Orientalism, Pan-Asianism, and Popular Culture. Orientalism examines western representations of "the East" as ideological bases for Western imperialism. Pan-Asianism examines how the Japanese, colonized Indians, and others have imagined Asian civilization as a solution to the problems of modernity. Popular culture examines imaginary conceptualizations of Asia in film, poster, and art. Offered Occasionally.

HIS 386 Cr.3

Women and Gender in Africa

An examination of gender and power in Africa, and the historical roots of inequality as experienced by women in the social, economic, religious and political spheres during the 19th and 20th centuries. Course combines case studies on: Queens, goddesses, warriors, gender systems, with thematic issues such as gender impact of colonialism, resistance, African feminism, women politicians and empowerment to provide a vivid image of the state of gender relations in Africa. Offered Occasionally.

HIS 388 Cr.3

Slavery

A study of the commonalities and differences between slave systems in Africa and the Americas which explores conditions in communities created by slaves and escaped slaves from the Americas, the Caribbean, and the southern United States. Focus on the impact of the slave trade, abolition and the nature of historical consciousness within Africa and the African Diaspora. Offered Occasionally.

HIS 389 Cr.3

Women and Gender in the Middle East

This course examines the role of gender in Middle East history, from the first years of Islam to present, focusing on women's activism and changing experiences. Offered Occasionally.

HIS 390 Cr.3

Public and Policy History Research

An intensive research field school in historic preservation, cultural resource management, oral history, or public policy. Students will complete one active research project in one of the above specialties. The specialty and project can vary from semester to semester. Offered Fall - Every Third Year.

HIS 392 Cr.3

History Through Film

This course uses film, television or similar media as a primary or secondary source in the study of history of a region, nation, or historical theme. The premise is that we may study the history of peoples, nations and cultures through film, rather than studying the history of film itself. This course will examine the perils and promise of using film as a source, briefly discuss film criticism and terminology, and include historical context for the films in the course. Students should expect to read and write about film criticism, history and historiography. Lect. 2, Lab 2. Offered Occasionally.

HIS 393 Cr.3

Material Culture

This course studies the history of museums from the seventeenth century to the present and reviews best practices in material culture analysis. Seminars expose students to historical sites, object analysis, didactic panel composition, and exhibition design. Field trips and work with local institutions will be an important aspect of this course. Offered Fall - Every Third Year.

HIS 394 Cr.3

Modern Japan

This course focuses on modern Japanese history up to and including the aftermath of the Second World War. Emphases will be upon social, cultural, political, and economic transformations that occurred following the country's forced opening to trade and diplomacy in the middle of the nineteenth century, subsequent industrialization and the formation of a unified nation-state with a constitutional monarchy, and Japan's imperialism and modern wars. Themes will include analyses of the contradictions involved in processes of modernity and modernization as well as consideration of ways we remember the period in question in manifestations of culture and as history. Offered Occasionally.

HIS 395 Cr.3

Postwar Japan

This course focuses on transformations and continuities following Japanese defeat at the end of the Second World War. It covers how US occupation policies transformed Japan from a modern nation-state with a colonial empire into a Cold War client state that became an economic superpower. After analyzing the costs and benefits of the postwar "economic miracle," the course investigates significant changes that followed the end of the Cold War in 1989, the death of the Showa Emperor (Hirohito) who had reigned since 1926 in that same year, and the bursting of Japan's "bubble economy" in 1990. The course ends with a consideration of what has happened in Japan since the beginning of the twenty-first century, and what the future may or may not entail. Offered Occasionally.

HIS/ARC 396 Cr.3

Ancient Syria

A historical and archaeological survey of ancient Syria and surrounding regions from prehistoric origins to the advent of the Roman conquest in the first century BC. Among the topics discussed will be the rise of urbanism and writing along the Euphrates River, religion, gender, social structure, and literature. Moreover, the student will study in translation the vast cuneiform archives from Ebla, Mari, Alalakh, Qattara, Nuzi, Emar, and Ugarit, to name a few. Furthermore, biblical, classical, and medieval sources concerning Syria in the first millennium BC will be studied. (Cross-listed with ARC/HIS; may only earn credit in one department.) Offered Occasionally.

HIS 397 Cr.3

African Nationalism

This course examines the role that ordinary African men and women played in ending colonialism and forming new nations, from the 1940s through the 1980s. It focuses on the processes of creating groups with collective goals, and the ways in which Africans articulated and contested their political visions for the future in the context of decolonization and the Cold War. Offered Occasionally.

HIS 398 Cr.3

Colonial Africa

This course focuses on African social history in the face of European colonialism in the nineteenth and twentieth centuries. It particularly examines the ways in which ordinary men and women accepted, adjusted to, or contested the changes that colonialism brought to their work, family, and community lives. Offered Occasionally.

HIS 399 Cr.3

Migration and Empire: 1200-1900

This course offers in-depth case studies of the Mongol, Ottoman, Dutch, and British empires (1200s-1900s CE), with particular emphasis on the role human migrations played in the creation and expansion of these empires. Selected types of migration to be analyzed in the context of these historical empires include: military, refugee, enslaved, and opportunity-seeking. The construction of migrant group identity, and reactions to migrants from different segment of imperial societies, will also be explored. Special emphasis will be placed on the labor, religious, and ethnic or racial distinctions that emerged as diverse populations came into contact with each other. Offered Fall - Even Numbered Years.

HIS 401 Cr.3

Japanese Religions

This course examines the complex history of religions in Japan. Focuses will include the various forms of Buddhism that came to Japan over centuries and how they interacted with the politicized animism and ancestor worship called Shinto. The course also addresses the way that modernity in Japan radically altered religious belief and practice, the relationship between post-1868 Shinto and nationalism, connections between Buddhism and imperialism, and post-1945 developments including the flourishing of new religions and religious cults. Offered Occasionally.

HIS 402 Cr.3

Secondary Content Methods for Teaching English Language Learners

This course will explore the importance of teaching content to English Language Learners (ELs) at the secondary (grades 4-12) level. Students enrolled in the course will examine the various methods and teaching strategies that can be utilized to best teach students with limited English proficiency (LEP) while at the same time working to develop English language literacy. The primary method to be taught is called Specially Designed Academic Instruction in English (SDAIE). Prerequisite: EDS 203, EDS 206; admission to teacher education. Offered Spring.

HIS 403 Cr.3

Curriculum, Instruction, and Assessment in Social Studies Education

This course will introduce pre-service education majors to the foundational concepts, theories, and strategies associated with social studies and history education. Topics to be introduced include lesson planning and learning segment design, variations of assessing student work, content literacy, teaching for social justice, theoretical approaches to social studies and history education, and instructional methods. Prerequisite: HIS 110; EDS 203, EDS 206. Offered Fall.

HIS 405 Cr.3

The Migration Experience: 1600-present

This course examines personal experience (individual, family level) of long distance migration and what they can help us understand about historical migration patterns ca the 1700s-2000s CE. Types of world migration covered include 16th-18th century indentured and enslaved migrations to the Caribbean, 19th century wage-labor migrations to the Americas, and refugee migrations as a result of world wars in the 20th century. The course prioritizes analysis of visual and written primary source materials created by emigrants. Examples include diaries, letters, photographs, oral histories, and manga. These types of materials will be used to investigate selected aspects of the migrant experience, including: life in transit, maintaining ties to home, adjustment to new economic and cultural contexts, and prospects for being accepted into receiving societies. Offered Occasionally.

HIS 406 Cr.3

Topics in Social History

Social historians investigate the ways that different social groups are defined and treated according to categories such as race, class, and gender. They are also concerned with the way that ordinary people define themselves, make claims on governments, and organize for change. Each time the class is offered it will focus on a particular topic important to social historians. Examples might include migration, urbanization, industrialization, social movements, the family, identity, or slavery. Examples and case studies will be drawn from several times and/or places. Offered Occasionally.

HIS 407 Cr.3

Government and Society

Could absolute monarchs actually rule with absolute power? Were fascist and communist states really totalitarian in their control of society? Political arguments frequently make generalized claims about "the government" or "the nation" and its relationship to its citizens or subjects. Yet these terms are often only vaguely understood, especially in any historical depth. This course enables students to understand the historical development of state forms and the ways that states and societies interact with one another. Students will use theories and arguments employed by historians to make clearer the complicated relationships by which states exert power and societies demand, accept, or resist the imposition of order by their states. Offered Occasionally.

HIS/ECO/GEO/POL/PSY/SOC 408 Cr.4

Teaching and Learning History and Social Studies in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in history and social sciences. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 351. (Cross-listed with ECO/GEO/HIS/POL/PSY/SOC; may only earn credit in one department.) Offered Fall, Spring.

HIS/RGS 409 Cr.3

20th Century Civil Rights Movement

This course explores the modern civil rights movement in the US and the struggle for African Americans and other marginalized groups to gain equal rights in voting, education, employment, housing, and other facets of life in the US. It begins with the MOWM and examines the seemingly competing philosophies of civil rights organizations such as CORE, SNCC, SCLC, BPP, AIM, SDS, NCAI, YLP, RG, NOW, NBFO, the Mattachine Society, the Daughters of Bilitis, STAR and other civil rights organizations, leaders, and local people in shaping their own destinies. It highlights and interrogates major national and local political struggles rooted in racial, gender, and sexual identities and their reciprocal relationships with international political and anti-colonial movements from 1941 to the present. It concludes with exploring the link between convict leasing, prison reform movements, political prisoners, and the prison industrial complex as the New Jim Crow. Prerequisite: one of the following: ERS 100, RGS 100, WGS 100, EDS 206, HIS 210. (Cross-listed with HIS/RGS; may only earn credit in one department.) Offered Spring.

HIS 410 Cr.3

British Empire

This course is an introduction to the expansion, consolidation, and eventual disintegration of the modern British Empire. It surveys British imperial history from the sixteenth century until the late twentieth century in order to understand the causes of imperial expansion and decline, ideologies of empire, the nature of imperial power, the roles of gender and culture, and the legacies of British colonialism. Offered Occasionally.

HIS 413 Cr.3

Topics in Cultural History

This course is an introductory course on relationships between history and culture. Emphases will vary whenever the course is taught. Generally, it covers three interrelated areas: (a) the history of the concept of culture and cultural practices, (b) cultural history, and (c) trans-disciplinary cultural studies. The course will focus upon signification in history, which may involve arts and aesthetics, symbols and signs, language and writing, customs and traditions, and various manifestations of culture in realms such as performances, architecture, cuisine, and apparel. The course will make connections between the place of culture in historical studies and other disciplines in the social sciences and humanities. Instructors may choose to introduce students to both conceptually oriented readings and studies of particular manifestations of culture in various times and places across history and the globe. Offered Alternate Years.

HIS 414 Cr.3

Ireland and the World: 1500-present

The history of Ireland has long held the imagination of people throughout the English-speaking world. The written record of the so-called "Land of Scholars and Saints" is indicative of the Irish people's literacy and is reflective of the great deal of interest paid to its history. Ireland's history is one filled with tragedy, complexity, redemption, revolution and rebellion, nationalism, intellectualism, and imperialism. Weaving through this historical narrative is the constant struggle regarding sectarianism, matters of gender and sexuality, economy, emigration, violence, and ethnicity. The relative smallness of Ireland allows the historian - and history student - to examine a wide variety of themes without sacrificing any of the nation's narrative. It is the overarching goal of this course to explore all these themes while analyzing the narrative of modern Ireland. Offered Alternate Years.

HIS 415 Cr.3

Religion and Conflict in Modern South Asia

This course explores religion as a source of conflict in modern South Asia. Using case studies of violent conflicts in India, Nepal, Pakistan, and Sri Lanka, students will examine the place of religious ideas and practices in defining social identity and shaping actual communities, and the role of religion in politics in the context of South Asia during the colonial and post-colonial periods. Materials include theoretical texts, human rights reports, ethnographic accounts, and films. Offered Occasionally.

HIS 416 Cr.3

History of Wisconsin State and Local Government

Beginning with sovereign First Nations, this course explores how Wisconsin's systems of governance developed in ways that were distinctive or similar to other states, and how these institutions shaped the experiences of people who lived here up until the present day. Topics include federal power in the 19th century, the territorial legislature, early city charters, drafting the state constitution, the Progressive era and Wisconsin Idea, Milwaukee party politics, municipal home rule, and transformations of the role of state government in the 20th century. Offered Occasionally.

HIS 418 Cr.3

Exhibition Development and Design II

This is a hands-on course that will teach students to put together an exhibit. This course will teach students to do marketing and public relations, educational programming, curation and interactive activities for an exhibit that will take place in the community. Offered Spring - Every Third Year.

HIS 419 Cr.4

Teaching and Learning Social Studies in the Secondary School and Field Experience II

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in history and social sciences. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: HIS 304, HIS 403; HIS 402 or concurrent enrollment; admission to teacher education. Consent of department. Offered Fall, Spring.

HIS 420 Cr.3

Global Fascisms

This course will explore the development and global presence of the varieties of fascisms during the 20th century. Beginning with the establishment of the Fascist Party in Italy, the course will explore its national variants in Europe, Asia, Africa, and the Americas. Particular attention will be given to the visual culture and aesthetics of global fascist movements, their impact on gender, and their influence on political culture in the decades after World War II. Offered Alternate Years.

HIS 450 Cr.1-12

History Internship/Field Experience

The internship or field experience provides a student with an on-the-job experience which is related to the history profession, inside or outside academe. A history faculty member shall supervise the selection process, the internship or field experience, and grading. A maximum of six credits may be counted toward the history major and three credits toward the history minor. Prerequisite: minimum cumulative GPA of 2.75 and minimum GPA of 3.00 in history. Consent of instructor. Offered Fall, Winter, Spring, Summer.

HIS 490 Cr.4

History Research Seminar

A capstone course in historical research and writing: themes and techniques of historical inquiry, research methods, use of primary sources, interpretation, and composition. Requires completion of a significant research and writing project. Prerequisite: HIS 200; 12 earned history credits, excluding current registration. Offered Fall, Spring.

HIS 497 Cr.1-3

Individual Study in History

Directed readings and research under the supervision of an assigned instructor. Repeatable for credit - maximum six. No more than six credits may count in the major and no more than three credits may count in the minor. Prerequisite: 20 credits in history, including current registration. Consent of instructor. Offered Fall, Winter, Spring, Summer.

Hmong (HMG) - Courses

Courses

+HMG 204 Cr.4

Hmong Heritage Language: Intermediate

This course provides opportunities for students to develop intermediate-level Hmong heritage language skills, particularly in reading and writing skills. Students learn the Hmong language writing system in order to read and write short texts, as well as continue to work on oral proficiency skills. Prerequisite: ENG 110 or ENG 112. Consent of instructor. Offered Fall.

+HMG 304 Cr.4

Hmong Heritage Language: Advanced

This course provides opportunities for students to develop advanced-level Hmong heritage language reading and writing skills. Students may engage in activities including, but not limited to: exploring Hmong language features related to social customs, reading authentic Hmong language manuscripts, practicing Hmong language narrative and expository writing, and translating documents in their fields. Prerequisite: HMG 204. Consent of instructor. Offered Occasionally.

Information Systems (IS) - Courses

Courses

IS 220 Cr.3

Information Systems for Business Management

This course provides the basic level of management information systems literacy. The course will introduce the building blocks of information systems, the various organizational aspects of utilizing information systems, and the role of information systems in the digital economy. Students will gain familiarity with spreadsheet and database applications that provide useful information to business functional areas. Prerequisite: sophomore standing. Offered Fall, Spring, Summer.

IS 300 Cr.3

Data Management for Business Problem Solving and Decision Making

This course provides an understanding of data management used to help solve business problems and make sound business decisions. In addition to the conceptual and academic foundations of data management, the course also explores the application of software tools to manage, manipulate, analyze, and visualize data. Prerequisite: IS 220 or healthcare analytics management minor. Offered Fall, Spring.

IS 310 Cr.3

Information Systems in Networked Environments: Technical Foundations and Applications

This course provides fundamentals of data communications and business networking requirements, and examines the linkage of information technology strategies and technological solutions for enabling effective business processes within and between organizations in emerging environments. Major topics include fundamentals of data communications and business networking, applications to data communications, basic technologies of the internet and the web, commercial use of internet technologies, e-business applications, and cases in online industries. Prerequisite: IS 220; admission to business or information systems major/minor. Offered Fall, Spring.

IS 320 Cr.3

Enterprise Systems for Decision Making and Data Analytics

This course provides an introduction to enterprise systems and their impact on organizations. An enterprise system application is utilized to illustrate the concepts, fundamentals and integration of enterprise-wide applications and processes. Enterprise system data analytics applications are applied to analyze business results and support business decision making. Prerequisite: admission to business or information systems major/minor or business analytics minor. Offered Fall, Spring.

IS 330 Cr.3

Business Choices and Telecommunications Decision

An examination of the business and organizational role of telecommunications. The course will not address the theoretical foundations of telecommunications, but rather focus on using telecommunications to support and achieve business strategies. Course topics will include how businesses are being reshaped by advances in telecommunications; how businesses plan, deploy and manage telecommunications resources; and how businesses are utilizing and administering local area network (LAN) and wide area network (WAN) technology to achieve business objectives. Prerequisite: CS 120; IS 310; admission to business or information systems minor. Offered Fall.

IS 340 Cr.3

Information Security Management, Ethical Issues and Compliance

This course introduces three broad subjects: 1) a framework of information security management including security principles, policies and procedures, security management models, risk assessment, and protection mechanisms; 2) ethical issues related to information management; and 3) information regulations and compliance with focuses on the legislative systems, policies, and legal environments. Prerequisite: admission to business or information systems minor or business analytics minor. Student cannot earn credit in both HIMT 340 and IS 340. Offered Fall.

IS 360 Cr.3

Management of Business Analytics

The course addresses the remarkable impact that analytics is having on business. This course provides students with the fundamental concepts and tools needed to understand the emerging role of business analytics in organizations. The course will examine issues that both information systems managers and non-information systems managers face in managing and performing business data analytics within an organization. Students will apply business analytics approaches to support business decision making and problem-solving efforts and learn how to effectively use and interpret analytic models and results for business decisions. The course covers managerial statistical tools in descriptive analytics and predictive analytics. Prerequisite: admission to business or information systems minor or business analytics minor; junior standing. Offered Fall, Spring.

IS 401 Cr.3

Management Information Systems: Analysis and Design

This is the first course in a two-course sequence that covers the development process for computer-based management information systems. This course emphasizes information analysis and the logical design of management information systems. Prerequisite: IS 300. Offered Fall.

IS 405 Cr.3

Special Topics in Information Systems

Emphasis will be on the examination and study of current issues in information systems. Topics will vary from semester to semester. Repeatable for credit with different topic - maximum six. Prerequisite: admission to business. Offered Occasionally.

IS 411 Cr.3

Management Information Systems: Project Management and Implementation

This is the capstone course in a sequence that covers implementing an information system. This course emphasizes the use of project management techniques to support an information system implementation. In-depth exposure to key tools, techniques, practices, and knowledge areas of project management will be applied to system implementation. Prerequisite: IS 401. Offered Spring.

IS 440 Cr.3

Business Data Visualization and Communication

This course covers data visualization concepts, practices, and tools particularly for analyzing and presenting business data. Students will evaluate, design, and develop effective visualizations and dashboards using various development tools. Prerequisite: ECO 230, IS 300. Offered Spring.

IS 451 Cr.1-6

CBA Management Information Systems Internship

The internship program as conceived and implemented is an unusual program designed to provide an opportunity for students in the College of Business Administration to participate in an approved program with a cooperating business, governmental or civic organization for usually 15 weeks of their undergraduate work. All management information systems (MIS) internships must be approved and supervised by an IS faculty member. For additional information, see internship description under the College of Business Administration heading. Repeatable for credit - maximum six. Prerequisite: cumulative GPA of at least 2.50; ACC 221, ACC 222; BLAW 205; ECO 110, ECO 120, ECO 230; FIN 355; IS 220; MGT 308; MKT 309; admission to business. Pass/Fail grading. Offered Fall, Spring, Summer.

IS 499 Cr.1-3

Independent Study

Individual reading or research under the guidance of a staff member. Open to selected advance students who have excellent records in the department. Repeatable for credit - maximum six. Prerequisite: admission to business. Consent of instructor. Pass/Fail grading. Offered Fall, Spring, Summer.

International Business (IB) - Courses

Courses

IB 450 Cr.1-6

International Business Internship

The internship program as conceived and implemented is an unusual program designed to provide an opportunity for students in the College of Business Administration at the University of Wisconsin-La Crosse to participate in an approved program with a cooperating international business, governmental or civic organization for usually 15 weeks of their undergraduate work. For additional information, see internship description under the College of Business Administration heading. Repeatable for credit - maximum six. Prerequisite: ACC 221, ACC 222; BLAW 205; ECO 110, ECO 120, ECO 230; FIN 355; IS 220; MGT 308; MKT 309; admission to business; senior standing. Pass/Fail grading. Offered Fall, Spring, Summer.

IB 499 Cr.1-3

Independent Study

Individual reading or research under the guidance of a staff member. Open to selected advanced students who have excellent records in the international business major. Students register with consent of the student's faculty advisor and the IBAC chairperson. Approval forms are available from the CBA Dean's Office; completion of form required prior to registration. Repeatable for credit - maximum six. Consent of department. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

International Studies (INS) - Courses

Courses

INS 350 Cr.1-6

Independent International Research

An individually designed, directed research project in an international setting, dealing with a significant research problem. Open to students in any department, the course permits in-depth, independent research using international sources, facilities, and resource persons. Requires a high degree of motivation and the ability to work independently. Prerequisite: junior standing; consent from the director of the Office of International Education & Engagement. Consent of department. Offered Occasionally.

INS 360 Cr.1-3

International Service Learning

Students will participate in service activities in another country as part of a faculty led study program. The activities may range from painting facilities to serving as conversational English partners. Students must engage in 15 hours of service activity, assigned readings, and write 3-5 formal pages or equivalent per credit. Repeatable for credit - maximum six. Offered Fall, Spring.

INS 450 Cr.1-6

International Internship

An academically relevant, professional field experience in a foreign country. Students must be approved and advised by the Office of International Education. Determination of relevancy shall be made by the Office of International Education with the advice and consent of the Director of International Studies curriculum. Students are responsible for finding an appropriate faculty advisor to supervise and grade the internship. Language proficiency must be demonstrated where applicable. Students must be on their internship worksite during the semester for which they are registered for academic credit. One credit/35 hours of experience. Repeatable for credit - maximum six. Prerequisite: junior standing; 2.75 cumulative GPA or consent of the Office of International Education and INS Program. Offered Occasionally.

INS 494 Cr.3

Engaging Global Challenges and Opportunities

Using interdisciplinary and multidisciplinary perspectives, students will apply the knowledge and skills acquired through the international studies program to contemporary global challenges and opportunities. This includes asking complex questions about others, and taking responsible and informed positions on how to address global challenges and opportunities today. Prerequisite: one of the following: ANT 202, GEO 202, HIS 202, POL 202, SOC 202, ANT 212, ECO 212, ENG 212, PHL 212, POL 212; senior standing. Offered Fall, Spring.

INS 495 Cr.3

Independent Study in International Studies

Supervised, independent study on a topic in international studies which is not accommodated by other courses in the university curriculum. Students design individual plans of study in consultation with appropriate faculty. Consent of instructor. Offered Fall, Spring.

Japanese (JPN) - Courses

Courses

JPN 101 Cr.4

Elementary Japanese I

This is the first of two introductory courses in Japanese for students with no prior knowledge of this language, focused on developing the four communicative skills: listening, speaking, writing, and reading, with an introduction to Japanese culture through a variety of topics from everyday life (family, shopping) to the arts (cinema, literature). A year of high school study in this language is equivalent to the 101 level. Offered Fall.

+JPN 102 Cr.4

Elementary Japanese II

This is the second course in a two-semester sequence that develops communication skills in listening, speaking, reading, and writing as well as knowledge and understanding towards Japanese culture. The course aims to develop communicative skills in a wide range of contexts with increasing focus on reading and writing communication. The classes are conducted primarily in Japanese and typing in Japanese will be introduced. Prerequisite: JPN 101. Offered Spring.

+JPN 201 Cr.4

Intermediate Japanese I

This is the first course in a two-semester sequence that develops intercultural communication skills in listening, speaking, reading, and writing. It also aims to develop knowledge and appreciation towards Japanese culture. The classes are conducted primarily in Japanese. Prerequisite: JPN 102. Offered Fall.

+JPN 202 Cr.4

Intermediate Japanese II

This is the second course in a two-semester sequence that develops communication skills in listening, speaking, reading, and writing. It also develops socio-cultural understanding of Japanese language and society. Prerequisite: JPN 201. Offered Spring.

Liberal Studies (LS) - Courses

Courses

LS 200 Cr.1

Career Exploration and Planning

This course is designed for students who are undecided or unclear of the benefits of a specific major. Students will explore how their values, interests, and abilities help define their major and career choices. Students will explore particular careers and learn what skills, knowledge, and aptitudes are necessary for success in those fields. Students will also explore the skills, knowledge, and aptitudes developed within particular majors. Students will learn about resources on campus and in the community that will help in exploring careers and building resumes. Emphasis will be placed on evaluating different major and minor combinations to best fit ideal career goals. Prerequisite: open to degree-seeking second semester freshmen and sophomores. Offered Fall, Winter, Spring, Summer.

LS 300 Cr.1

Career Preparation in Liberal Studies

This course is designed for juniors and seniors who will be graduating within the year who will be on the job hunt or applying to graduate school. The course is designed to help students learn about career options; explore specific jobs; evaluate their skills, abilities, and values and how this plays into the job search; prepare for internships/jobs including resumes, cover letters, and interviewing; and learn where and how to apply for jobs and/or graduate programs. Prerequisite: junior or senior standing. Offered Fall, Winter, Spring, Summer.

Management (MGT) - Courses

Courses

MGT/MKT 301 Cr.3

Business Communication

This course explores different genres of written and oral communication employed in the business environment. Emphasis is placed on utilizing communication strategies that are tailored to both the audience and the organizational context in which the communication takes place. The ethical implications of communication within a business environment are also considered. This course develops a process approach to writing, which moves from planning through revision and final editing in producing business-related documents. Students will also be introduced to communication techniques that enhance productivity within groups as well as develop the ability to write as a team and create presentations that flow seamlessly. Prerequisite: ACC 221; CST 110; ECO 110, ECO 120; ENG 110 or ENG 112; sophomore standing; CBA major or healthcare analytics management minor. Students may not earn credit in more than one of the following: MGT/MKT 301, FIN/MGT/MKT 323. Offered Fall, Spring.

MGT 303 Cr.3

Principles of Labor-Management Relations

Instruction develops the necessary perspective and the theoretical and legal structure necessary to an understanding of current public policy and contemporary issues in labor-management relations. The case study approach is used in studying current applications. Prerequisite: admission to business or public administration major; junior standing. Offered Occasionally.

MGT 308 Cr.3

Organizational Behavior

This course provides an introduction to organizational behavior. Emphasis is on key individual and group level behavioral processes deemed essential for effective management. They include perception, motivation, communication, and group dynamics. In addition, the course covers some basic concepts of organizational theory such as organizational structure and design, organizational culture, and strategy and goals. Prerequisite: admission to business. Also open to majors with a business concentration, or business minors, with junior standing. Offered Fall, Spring, Summer.

MGT/MKT 310 Cr.3

Principles of Sustainable Business

This course lays a business foundation on the relationships between social, environmental, and economic systems and their impact on business. Challenges to existing business theory will embrace a sustainability perspective of business that includes an introduction to sustainability frameworks, system thinking, and current trends in and among sustainability issues and business stakeholders. Prerequisite: admission to business. (Cross-listed with MGT/MKT; may only earn credit in one department.) Offered Fall.

MGT/FIN/MKT 323 Cr.3

Integrated Core Business Consulting and Professional Communication

In this course, students will build knowledge and skills needed to integrate and apply material across the functional areas of business to solve complex business problems. Knowledge areas and skill sets that are specifically targeted include decision making and critical thinking, communication, teamwork, and time management. Students develop in these areas while building a foundation in effective business consulting. Students will work in teams to complete applied business consulting projects, while also engaging in smaller written assignments and exercises throughout the course. Prerequisite: admission to business. Students must take this course concurrently with integrated core sections of MGT 308, MKT 309, and FIN 355. Students may not earn credit in more than one of the following: MGT/MKT 301, FIN/MGT/MKT 323. Consent of instructor. Offered Fall.

MGT 360 Cr.3

International Management

Through this course, students will be introduced to the opportunities and challenges corporations face when doing business internationally and identify strategies and practices to manage effectively in a global environment. In particular, students will be exposed to, and encouraged to critically think about, international management topics such as the global business environment, ethics and corporate social responsibility, culture, international strategy and entry, organizational behavior across cultures, and international human resource management issues. In the end, students develop an understanding of, and appreciation for, culture and its impact on management and strategies for managing in a complex, global environment. Prerequisite: admission to business or international business minor with a non business major; junior standing. Offered Fall, Spring.

MGT 385 Cr.3

Human Resource Management

This course serves as an introduction to human resource management (HRM), emphasizing the processes of employment and the related HRM functions. Functional areas in HRM related to HR strategy and workforce planning, recruitment, staffing and hiring, employee training and development, performance management, and employee wellness are covered. Across these functional areas, principles related to legality, diversity and inclusion, and business analytics are emphasized and applied. Students may take this course as a foundational experience toward a career in HR, or as exposure to pertinent HRM knowledge and skills needed by any effective manager. Prerequisite: admission to business or sports management major; junior standing. Offered Fall, Spring.

MGT 386 Cr.3

Compensation and Benefits Administration

A comprehensive treatment of issues involved in compensation and benefits administration. Issues involved are wage theory, job evaluation, job pricing, types of incentives. Mandated and voluntary benefits, ERISA, legal issues in compensation, cost, impact and future of compensation and benefits administration are also considered. Prerequisite: admission to business. Offered Occasionally.

MGT 393 Cr.3

Production and Operations Management

This introductory course explains the theories and analytical techniques about how manufacturing and service operations create value through operations management function. High-performing, world-class organizations have demonstrated that they execute not only efficient but also socially responsible operations management practices. This operations management course covers some of these practices: process management, operations strategy, project management, quality management, lean operations, global supply chains, sustainability, forecasting and inventory management. Prerequisite: STAT 145; MTH 160, MTH 175 or MTH 207; admission to business. Offered Fall, Winter, Spring, Summer.

MGT 395 Cr.3

Management Science

Introduction to the quantitative models used in the private and public sectors. Topics include linear programming, transportation and assignment models, project planning, basic inventory models, decision theory, queuing models, and game theory. Prerequisite: MGT 393; admission to business or information systems major. Offered Occasionally.

MGT 399 Cr.3

Project Management: Planning, Scheduling, Executing, and Controlling

This course emphasizes the use of special tools and techniques in management to accomplish the organizational mission through better control and use of existing resources. It explores ways to harness cross-functional synergy in an organization to successfully plan, schedule, execute and control projects. Prerequisite: STAT 145; admission to business; junior standing. Offered Occasionally.

MGT 400 Cr.1-3

Special Topics in Management

Emphasis will be on examination and study of current management issues. Topics will vary from semester to semester. Same topic may not be repeated if a grade of "C" or better was earned in that topic. Repeatable for credit - maximum nine. Prerequisite: admission to business. Offered Occasionally.

MGT 402 Cr.3

Healthcare Analytics Management

This course is primarily concerned with the study of how data and analytics can impact the overall performance of healthcare organizations. The course answers a fundamental question: How do some healthcare firms leverage data analytics and the accompanying technology to perform better than others? Students will explore multifunctional problems that confront top management and gain exposure to the current use of analytics in consumer driven healthcare, risk management, quality and safety, financial performance and reimbursement, health outcomes analysis, and healthcare value and costs. Prerequisite: grade of "C" or better in STAT 145 or STAT 245; ECO 230; cumulative GPA of 3.0 or above; declared major. Offered Spring.

MGT 408 Cr.3

The Global Responsibility of Business

This course considers the turbulent environment in which organizations function and examines specific dimensions of this environment including the evolution of a framework of global human rights, the impacts of economic and social globalization, the convergence of global approaches to sustainability and the changing ideological and political frameworks affecting business. It will also examine matters of global corporate social responsibility and social entrepreneurship. Prerequisite: admission to business or chemistry major with business concentration, or physics major with business concentration; senior standing. Offered Fall, Spring.

MGT 412 Cr.3

Leadership and Team Development

This course focuses on key differences between management and leadership and the importance of leadership in the context of effective team building. The emphasis is on organizational change and the role that leadership plays in providing direction for this change. Collaborative and non-hierarchical strategies that facilitate team building will be discussed as an alternative to top-down behavior. The course will provide opportunities to think deeply and systematically about the development of leadership skills and the creativity, initiative and motivation critical to that development. Prerequisite: admission to business or leadership development minor; junior standing. Offered Occasionally.

MGT 420 Cr.3

Entrepreneurship

Students are introduced to the theories, methods, knowledge and skills required of successful entrepreneurs. In addition, students will evaluate the business skills and commitment necessary to successfully operate an entrepreneurial venture and review the challenges and rewards of entrepreneurship. Students will understand the role of entrepreneurial businesses in the economy. Prerequisite: admission to business; junior standing. Offered Fall, Spring.

MGT 422 Cr.3

Social Entrepreneurship

This course introduces students to the utilization of business entrepreneurial skills as a means of creatively responding to societal problems. Course discussion will include the drivers of social entrepreneurship, opportunity identification, social venture financing, hybrid legal forms, and social impact measurement. Prerequisite: admission to business; junior standing. Offered Occasionally.

MGT 430 Cr.3

Cross-Cultural Management

Comparative management is concerned primarily with studying the similarities and differences among nations in the context of management systems in different countries. The focus of the course is on the interaction between sociopolitical and cultural environments and management systems. This course seeks to encourage future managers in a global environment to think in a global context and be knowledgeable about the cultures, political economies and business practices of other countries. Prerequisite: admission to business or international business major/minor or French/German/Spanish major with a business concentration; junior standing. Offered Occasionally.

MGT 431 Cr.3

Business, Labor and Human Rights

The course examines the impact of globalization, trade regulation and international conventions, agreements and law on human rights, specifically in the context of business and labor rights. Topics include the emergence of post-war human rights structures; the impact of the International Labor Office on Human Rights in the workplace; the establishment of economic, social, and cultural rights in the context of business; the growing conflicts between trade agreements and national policy and emerging partnerships between business organizations and international agencies. Managerial and trade union responses to emerging human rights issues are considered. Prerequisite: admission to business or international business minor with a non business major; senior standing. Offered Occasionally.

MGT 449 Cr.3

CBA Capstone: Applied Business Strategy

The course will operationally apply the principles, concepts, and methods of the College of Business Administration core requirements in the context of strategic decision making within organizations using both actual and simulated case situations. May be taken only in the semester of graduation. Prerequisite: satisfactory completion of all core requirements (ECO 110, ECO 120, ECO 230; ACC 221, ACC 222; BLAW 205; IS 220; FIN 355; MGT 301 or MKT 301, MGT 308, MGT 393; MKT 309); admission to business; senior standing. Offered Fall, Winter, Spring, Summer.

MGT 450 Cr.1-6

College of Business Administration Internship

The internship program as conceived and implemented is an unusual program designed to provide an opportunity for students in the College of Business Administration at the University of Wisconsin-La Crosse to participate in an approved program with a cooperating business, governmental or civic organization for usually the equivalent of 15 weeks of their undergraduate work. Students may apply up to three internship credits toward the management major, either MGT 450 or MGT 452. For additional information, see internship description under the College of Business Administration heading. Repeatable for credit - maximum six. Prerequisite: ACC 221, ACC 222; BLAW 205; ECO 110, ECO 120, ECO 230; FIN 355; IS 220; MGT 301, MGT 308; MKT 309; admission to business; senior standing. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

MGT 452 Cr.1-6

College of Business Administration International Internship

The internship program is designed to provide an opportunity for students in the College of Business Administration at the University of Wisconsin-La Crosse to participate in an approved program with a cooperating business, governmental or civic organization for usually the equivalent of 15 weeks of their undergraduate work. Credit for international internships can be received for only internships classified as internationally related internships by Career Services. Students may apply up to three internship credits toward the management major, either MGT 450 or MGT 452. For additional information, see internship description under the College of Business Administration heading. Repeatable for credit - maximum six. Prerequisite: ACC 221, ACC 222; BLAW 205; ECO 110, ECO 120, ECO 230; FIN 355; IS 220; MGT/MKT 301; MGT 308; MKT 309; admission to business; senior standing. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

MGT/MKT 480 Cr.3

Business Sustainability Capstone

The purpose of the capstone course is to integrate the knowledge and concepts students have gained through the sustainable business minor. The course is designed to apply the tools and insights gained in this and other courses to a defined project, creating deliverables that will be useful to partner organizations. This is done by developing a substantial project in any of the following formats: a client-based project with a client of your choosing, a business plan, research study, white paper, training manual, survey/interview, case study, strategic/long-range planning document, grant proposal, feasibility study, or sustainability campaign design (for marketing). Prerequisite: MGT/MKT 310; MGT 408; three credits of CBA sustainable business minor electives. Open only to minors in sustainable business. (Cross-listed with MGT/MKT; may only earn credit in one department.) Offered Spring.

MGT 483 Cr.3

Employee Training and Development

The course examines principles and practices of employee training and development in business organizations. Students learn to analyze training needs and objectives at the organization and job level. They also learn about various instructional methods used in business. Differences between formal and informal training and development programs will be considered. Methods of evaluating training and development programs will also be discussed. The relationship between training and development and other organizational and human resource management goals will also be examined. Prerequisite: admission to business. Offered Occasionally.

MGT 484 Cr.3

International Human Resource Management

This course examines how human resource management (HRM) changes strategically depending on the internationalization of the company, as well as HRM practices in countries outside the United States. It focuses on the connections between corporate strategies and the effective management of human resources which, at times, may require differing policies across countries. Through this course, students will be exposed to, and encouraged to critically think about, international HRM topics such as global strategic HRM, international organizations and their structures, cross-cultural management, global staffing and international assignments, compensation and benefits, the legal and regulatory context, international training and development, among others. In the end, students develop an understanding of, and appreciation for, culture and its impact on human resource management. Prerequisite: admission to business, international business minor with a non business major, or French major with a business concentration; junior standing. Offered Occasionally.

MGT 485 Cr.3

Collective Bargaining

Nature, scope and historical background of collective bargaining in the U.S. Labor- Management sector covering organization of the parties for bargaining, procedures, strategies, issues. Analysis of contents of labor agreements. Prerequisite: admission to business; senior standing. Offered Occasionally.

MGT 486 Cr.3

Human Resources: Current Issues and Policies

An in-depth investigation of selected current trends and issues of importance in personnel and industrial relations. An integrative, case-oriented approach to the study of problems and policy in personnel and industrial relations. Simulation exercises and case analysis are used in addition to lecture and student presentations. Prerequisite: admission to business; senior standing. Offered Occasionally.

MGT 487 Cr.3

Managing Diversity and Inclusion in Organizations

This course provides a thorough understanding of the advantages and challenges of managing an increasingly diverse and global workforce. The course examines the basic psychological and social processes that influence how members of different groups perceive and interact with one another (e.g., bias, stereotypes, discrimination). From this foundation, various diversity issues in organizations are addressed (e.g., race, sex, LGBT+, religion, age, ability, and intersectionality). The best practices for successful diversity management are also discussed through improving recruitment and staffing, developing and retaining talent, facilitating strong performance in teams, and creating a climate for inclusion. Prerequisite: admission to business. Offered Occasionally.

MGT 492 Cr.3

Global Supply Chain Management and Logistics

The course is a seminar in contemporary, leading-edge theory and practice in global supply chain management, logistics, and transportation. The emphasis is on framing, analyzing, designing, planning, implementing, coordinating, and controlling activities that add value to an organization or a supply network in a global context. Prerequisite: admission to business. Offered Fall.

MGT 493 Cr.3

Green Operations Management

This course is a discussion-based forum focused on historical and contemporary environmental sustainability initiatives, and the relationships amongst these initiatives and global business strategies and tactics. This course is designed to be a survey of leading-edge thinking and knowledge in the field, where contemporary practice and theory intersect. Prerequisite: STAT 145; admission to business. Consent of instructor. Offered Spring.

MGT 499 Cr.1-3

Independent Study

Individual reading or research under the guidance of a staff member. Open to selected advanced students who have excellent records in the department. Registration with the consent of the student's regular adviser, the instructor, and the department chairperson. Students may apply up to three independent study credits toward the management major. Repeatable for credit - maximum six. Prerequisite: admission to business. Consent of instructor. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

Marketing (MKT) - Courses

Courses

MKT 250 Cr.1-3

Marketing Internship

A marketing internship provides an opportunity for declared Marketing majors to earn academic credit for experiential learning when working for cooperating business, government, or civic organizations. Repeatable for credit - maximum six credits. Prerequisite: cumulative GPA of at least 2.50; declared marketing major. Consent of department. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

MKT 299 Cr.1-3

Marketing Independent Study

This courses consists of individual research, readings, or applied study under the guidance of a faculty member. It is open to select students who have excellent credentials and an interest in undergraduate research. Repeatable for credit - maximum three. Prerequisite: declared marketing major; cumulative GPA of at least 3.0. Consent of department. Pass/Fail grading. Offered Fall, Spring.

MKT/MGT 301 Cr.3

Business Communication

This course explores different genres of written and oral communication employed in the business environment. Emphasis is placed on utilizing communication strategies that are tailored to both the audience and the organizational context in which the communication takes place. The ethical implications of communication within a business environment are also considered. This course develops a process approach to writing, which moves from planning through revision and final editing in producing business-related documents. Students will also be introduced to communication techniques that enhance productivity within groups as well as develop the ability to write as a team and create presentations that flow seamlessly. Prerequisite: ACC 221; CST 110; ECO 110, ECO 120; ENG 110 or ENG 112; sophomore standing; CBA major or healthcare analytics management minor. Students may not earn credit in more than one of the following: MGT/MKT 301, FIN/MGT/MKT 323. Offered Fall, Spring.

MKT 309 Cr.3

Principles of Marketing

An introduction to the study of marketing in business and other organizations. Topics include: the marketing environment, marketing strategies and decision-making, marketing ethics and the international dimension of marketing strategy. Prerequisite: ECO 110; business minor or a major with a business concentration and junior standing, or admission to business. Offered Fall, Winter, Spring, Summer.

MKT/MGT 310 Cr.3

Principles of Sustainable Business

This course lays a business foundation on the relationships between social, environmental, and economic systems and their impact on business. Challenges to existing business theory will embrace a sustainability perspective of business that includes an introduction to sustainability frameworks, system thinking, and current trends in and among sustainability issues and business stakeholders. Prerequisite: admission to business. (Cross-listed with MGT/MKT; may only earn credit in one department.) Offered Fall.

MKT/FIN/MGT 323 Cr.3

Integrated Core Business Consulting and Professional Communication

In this course, students will build knowledge and skills needed to integrate and apply material across the functional areas of business to solve complex business problems. Knowledge areas and skill sets that are specifically targeted include decision making and critical thinking, communication, teamwork, and time management. Students develop in these areas while building a foundation in effective business consulting. Students will work in teams to complete applied business consulting projects, while also engaging in smaller written assignments and exercises throughout the course. Prerequisite: admission to business. Students must take this course concurrently with integrated core sections of MGT 308, MKT 309, and FIN 355. Students may not earn credit in more than one of the following: MGT/MKT 301, FIN/MGT/MKT 323. Consent of instructor. Offered Fall.

MKT 341 Cr.3

International Marketing

An analysis of worldwide marketing opportunities through a consideration of political, legal, economic, and cultural factors in the international context. Prerequisite: MKT 309; admission to business or international business minor, or French/German/Spanish major with a business concentration. Offered Fall, Spring.

MKT 351 Cr.3

Sustainability in Marketing

The course addresses environmental, social and economic sustainability issues facing society and modern marketing professionals. Course discussion will include sustainable marketing strategies, consumer attitudes, and consumption. Prerequisite: MKT 309; admission to business. Offered Spring.

MKT 362 Cr.3

Buyer Behavior

This course examines basic concepts related to understanding buyer behavior. Topics include information processing, perception, and decision making. Also examines individual and socio-cultural variables which influence buyer behavior. Prerequisite: MKT 309; admission to business or exercise science sport management. Offered Fall, Spring.

MKT 365 Cr.3

Integrated Marketing Communications

This course introduces the various forms and tools of marketing promotion. It includes an analysis of promotional activities in the development of an integrated marketing communications plan. It also develops student understanding of the role of promotion and the integrated nature of marketing planning. This course details the nature and process of developing integrated marketing campaigns as a part of the promotional mix. Students examine integrated marketing research, media planning, budgeting, creative activities, and ethical considerations. Prerequisite: MKT 309; admission to business or exercise science sport management. Offered Fall, Spring.

MKT 367 Cr.3

Market Research

This course examines the research techniques commonly used to examine buyer behavior, including secondary data, surveys, and focus groups. Topics also include an analysis of research design methods, and the application of research to marketing decision making. Prerequisite: MKT 309; ECO 230; admission to business. Offered Fall, Spring.

MKT 370 Cr.3

Professional Selling and Sales Management

This course examines the role of personal selling in the marketing mix and addresses personal selling activities and techniques. Topics covered include communication and persuasion, prospecting, overcoming objections, presentations, questioning and closing methods, time and territory management, social, ethical, and legal issues. The course will focus primarily on business-to-business sales. Prerequisite: MKT 309; admission to business or exercise sport science - sport management. Offered Fall, Spring.

MKT 386 Cr.3

Business Marketing and Distribution

Business-to-business marketing issues are explored, including distinctive characteristics of the business market, ways in which organizations make buying decisions, requirements for marketing strategy success, with an emphasis on distribution/supply chain in business marketing. Prerequisite: MKT 309; admission to business. Offered Fall, Spring.

MKT 400 Cr.1-3

Marketing Forum

Emphasis will be on examination and study of current marketing issues. Topics will vary from semester to semester. Repeatable for credit - maximum six. Prerequisite: MKT 309; admission to business. Offered Occasionally.

MKT 415 Cr.3

Marketing Application and Advanced Research

The planning, development, and implementation of an individual marketing-related research project or small group applied case study. Students will develop a project proposal and a written report related to their marketing studies, including an analysis of how the project relates to career goals. Repeatable for credit - maximum six. Prerequisite: MKT 367; six additional credits of MKT major coursework; admission to business. Offered Fall, Spring.

MKT 440 Cr.3

Comparative Marketing Systems

A comparative marketing analysis of a specific region or country. An examination of the marketing practices, social forces, politics, trade history, and economics of (a) specific international area(s). Special attention to the operations of U.S. based firms operating in the area(s). Prerequisite: MKT 309; MKT 341 or instructor approval; admission to business or international business minor. Offered Summer.

MKT 444 Cr.3

Sports and Recreation Marketing

A comprehensive study of the planning, organization and implementation of marketing plans for all segments of the sports and recreation industry. Topics covered include: assessing market potential, defining the customer, location analysis, pricing, promotion, facilities and services management. Other issues addressed include the impact of new technology, cultural changes and other uncontrollable factors on sports marketing. Prerequisite: MKT 309; admission to business or exercise sport science - sport management. Offered Fall.

MKT 445 Cr.3

International Marketing Strategies

A study of policy and strategy formulation in the context of international marketing. Emphasis is placed on both the theory and application of international marketing decision processes. Prerequisite: MKT 309; MKT 341 or instructor approval; admission to business or international business minor. Offered Occasionally.

MKT 450 Cr.3

Advanced Marketing Internship

An advanced marketing internship provides an opportunity for students to gain professional job experience by working in an area of marketing, applying theory and concepts to the marketing needs of a cooperating business, government, or civic organization, for a minimum of 150 hours. Repeatable for credit - maximum six credits; only three credits will apply toward the marketing major. Prerequisite: MKT 309; six credits of completed or concurrent MKT coursework; cumulative GPA of at least 2.50; admission to business. Consent of department. Offered Fall, Winter, Spring, Summer.

MKT 465 Cr.3

Digital Marketing and Analytics

This course offers a hands-on, application-based approach to the use of digital channels as marketing tools. The course explores how marketers use digital media, such as websites, blogs, social media platforms, and email for marketing communication purposes. Topics covered include search engine optimization, website design, content strategy, social media marketing, campaign management and evaluation, advertising, and digital marketing metrics and analysis. Prerequisite: MKT 309; MKT 365 or concurrent enrollment; admission to business. Offered Fall, Summer.

MKT 467 Cr.3

Marketing Analytics

This course covers the marketing analytics field from a broad and applied perspective, allowing students to practice utilizing marketing analytics from a "consumer of insights" point of view. The focus is on understanding the results from analytics; managing analytical projects successfully; and communicating insights for business impact. The course will not focus on coding. The types of data managers and executives are most likely to encounter, including Big Data, will be examined. The most commonly applied multivariate analytical approaches (such as regression, cluster analysis, multidimensional scaling, etc.), including a few new and emerging areas such as social data analysis, text analytics, and neural nets will be explained using simple step-by-step examples, with a heavy focus on business application. Students will practice solving real business problems by selecting and applying the right data and the best analytics. Prerequisite: MKT 309; one of the following: ECO 307, IS 300, MGT 402, or MKT 367; admission to business. Offered Spring.

MKT 470 Cr.3

Sales Force Management

Effective management of sales people directly impacts the success of a marketing strategy and of the company in general. Consequently, it is imperative that sales managers develop the basic competencies to effectively manage and lead a business-to-business (B2B) sales force in order to meet the overall goals of the organization. This course enables students to develop these valuable competencies as well as business-related decision-making skills in the areas of a successful sales force program. Emphasis is placed on sales potential and forecasting, sales force investment and budget, ethical and legal issues, emotional intelligence, account relationship strategies, recruitment, training, motivation, and compensation. Prerequisite: MKT 309, MKT 370; admission to business. Offered Spring.

MKT 479 Cr.3

Marketing Management

The analysis, planning, implementation and control of marketing programs designed to bring about desired exchanges with target markets within organizational objectives. Prerequisite: MKT 341, MKT 362, MKT 367; to be taken in the student's semester of graduation; admission to business. Offered Fall, Spring.

MKT/MGT 480 Cr.3

Business Sustainability Capstone

The purpose of the capstone course is to integrate the knowledge and concepts students have gained through the sustainable business minor. The course is designed to apply the tools and insights gained in this and other courses to a defined project, creating deliverables that will be useful to partner organizations. This is done by developing a substantial project in any of the following formats: a client-based project with a client of your choosing, a business plan, research study, white paper, training manual, survey/interview, case study, strategic/long-range planning document, grant proposal, feasibility study, or sustainability campaign design (for marketing). Prerequisite: MGT/MKT 310; MGT 408; three credits of CBA sustainable business minor electives. Open only to minors in sustainable business. (Cross-listed with MGT/MKT; may only earn credit in one department.) Offered Spring.

MKT 499 Cr.3

Advanced Marketing Independent Study

This course consists of individual reading or research under the guidance of a faculty member. It is open to selected advanced students who have excellent records in the department. Repeatable for credit - maximum six. Prerequisite: MKT 309 and six additional upper level credits completed, or concurrent, of MKT coursework; cumulative GPA of at least 3.0; admission to business. Consent of department. Offered Fall, Spring.

Mathematics (MTH) - Courses

Courses

MTH 050 Cr.3

Basic Algebra

A review of beginning algebra. Topics include an elementary treatment of real numbers, polynomials, linear equations, inequalities, rational expressions, systems of linear equations, radicals, and quadratic equations. Letter grade, but only "F" calculated in GPA. Transcript credit only. Offered Fall, Spring.

MTH 051 Cr.2

Topics in Intermediate Algebra

A course to enhance the student's skills in selected areas of intermediate algebra; areas covered include polynomials, rational expressions, exponents, equations, and inequalities. Letter grade, but only "F" calculated in GPA. Transcript credit only. Prerequisite: MTH 050 or an appropriate placement test score. Offered Fall, Spring.

+MTH 115 Cr.3

Mathematics for Early Childhood and Elementary Teachers I

This course is designed for prospective early childhood and elementary teachers. Content strands include number and operations and algebraic thinking. Topics from these strands include pre-number concepts, place-value and numeracy, and multiple representations and algorithms for whole number and fraction arithmetic. Mathematical structure will also be emphasized to analyze arithmetic and algebraic situations. Aligned with state and national standards, this course will emphasize problem solving, communication, reasoning, and representation in mathematics. Mathematical connections will be made to contextual problems and representations when appropriate. Prerequisite: declared early childhood education or elementary/middle education major. Offered Fall, Spring.

+MTH 116 Cr.2

Mathematics for Early Childhood and Elementary Teachers II

This course is designed for prospective early childhood and elementary teachers. Content strands include geometry, measurement, data, and chance. Topics from these strands include properties of geometric figures, geometric measurement (length, area, volume), representations of data, and chance processes. Aligned with state and national standards, this course will emphasize problem solving, communication, reasoning, and representation in mathematics. Mathematical connections will be made to contextual problems and representations when appropriate. Prerequisite: declared early childhood education or elementary/middle education major. Offered Fall, Spring.

+MTH 123 Cr.4

Mathematics for Decision Making

This course is designed to teach students the mathematical skills needed for decision making in the 21st century. Topics for this course include set theory, syllogisms and fallacies, counting and probability, financial mathematics, and statistical concepts. Offered Fall, Spring, Summer.

+MTH 135 Cr.4

Mathematics for Elementary Teachers I

This course is designed for prospective elementary teachers. Content strands include number and operations and algebra and functions. Number and operations topics include set theory and pre-number concepts, place-value and numeracy, multiple representations and algorithms for arithmetic, number theory (e.g. divisors, multiples), and proportional reasoning. Algebra and functions topics include the concepts of variable and function, algebraic thinking, linear, polynomial, rational, and exponential functions, mathematical models, rates of change, and multiple representations of relations. Aligned with state and national standards, this course will emphasize problem solving, communication, reasoning, and representation in mathematics. Prerequisite: MTH 050 or satisfactory placement test score; EC/MC or MC/EA major. Offered Fall, Spring.

+MTH 136 Cr.4

Mathematics for Elementary Teachers II

This course is designed for prospective elementary teachers. Content strands include geometry and measurement, data analysis and statistics, and probability and discrete math. Topics from these strands include: properties of geometric figures, geometric measurement (length, area, volume), congruence and similarity, and transformations; descriptive statistics, sampling design and statistical comparisons, randomness and variability, inferential statistics (including the normal distribution); counting techniques, uniform and nonuniform distributions, and representations and calculations of probabilities for simple and compound events. Aligned with state and national standards, this course will emphasize problem solving, communication, reasoning, and representation in mathematics. Prerequisite: MTH 135 with a grade of "C" or better. Offered Fall, Spring.

+MTH 150 Cr.4

College Algebra

A college algebra course on the properties, graphs, and applications of elementary functions. Topics include the real and complex numbers, concepts from analytic geometry, solutions to equations and inequalities, the elementary algebraic functions, and the logarithmic and exponential functions. Prerequisite: MTH 051 or two years of high school algebra and an appropriate placement test score. (Successful completion of MTH 151, MTH 175, or MTH 207 precludes taking MTH 150 for credit.) Offered Fall, Spring, Summer.

+MTH 151 Cr.4

Precalculus

A precalculus course on properties, graphs, and applications of elementary transcendental functions. Topics include concepts from analytic geometry; theory of equations; the logarithmic, exponential, trigonometric, and inverse trigonometric functions; and analytic trigonometry. Prerequisite: grade of "C" or better in MTH 150 or two years of high school algebra and appropriate placement test score. (Successful completion of MTH 151 precludes taking MTH 150. Successful completion of MTH 207 precludes taking MTH 151.) Offered Fall, Spring, Summer.

+MTH 160 Cr.4

Mathematics for Business

This course is an introduction to the quantitative methods for treating problems that arise in business-related fields. Topics include finite mathematics, logic, probability, functions and functional models, exponential and logarithmic functions and models, and an introduction to differential calculus. Examples and applications from management, economic sciences, and other business-related areas are included.

This course is for students planning to major in business. Prerequisite: grade of "C" or better in MTH 150 or appropriate placement test score; CBA major, CASSH economics major, or business administration minor. Offered Fall, Spring, Summer.

MTH 171 Cr.3

Geometry for Elementary and Middle School Teachers

This course explores the fundamental ideas of measurement and geometry concepts in K-8 mathematics. Content includes the investigation of measurement concepts; the analysis and classification of two- and three-dimensional geometric figures; and the exploration and application of geometric transformations, tessellations, symmetry, congruence, and similarity. Aligned with national and state standards, this course will emphasize intuitive direct and indirect proof and reasoning, the investigation and discovery of geometric structures, and the use of manipulative materials and technology. Prerequisite: grade of "C" or better in MTH 135 and MTH 136. Offered Fall.

+MTH 175 Cr.4

Applied Calculus

Basic concepts and methods from differential and integral calculus. Logarithmic and exponential functions are included, but not trigonometric functions. Emphasis of the course is on models and applications in business and the social, life, and physical sciences. Prerequisite: grade of "C" or better in MTH 150 or two years of high school algebra and appropriate placement test score. (Successful completion of MTH 175 precludes taking MTH 150. Successful completion of MTH 207 precludes taking MTH 175.) Offered Fall, Spring, Summer.

+MTH 207 Cr.5

Calculus I

A rigorous introduction to calculus. Topics include limits, rules for differentiation, derivatives of trigonometric, logarithmic and exponential functions, the Mean Value Theorem, integration, and the Fundamental Theorem of Calculus. In the area of applications, the course covers problems on related rates, extrema, areas, volumes, and Newton's Second Law. Prerequisite: grade of "C" or better in MTH 151 or four years of high school mathematics, including trigonometry, and appropriate placement score. (Successful completion of MTH 207 precludes taking MTH 150, MTH 151, or MTH 175 for credit.) Offered Fall, Spring, Summer.

+MTH 208 Cr.4

Calculus II

A continuation of Calculus I with a rigorous introduction to sequences and series. Topics include techniques of integration and indeterminate forms, improper integrals, applications of integrals to the physical sciences, tests for the convergence of series, absolute convergence, power series, and Taylor's Theorem with Remainder. First order linear differential equations are explored, as well as the geometry of space. Prerequisite: grade of "C" or better in MTH 207. Offered Fall, Spring.

+MTH 215 Cr.2

Mathematics for Middle School Teachers I

This course is designed for prospective elementary and middle school teachers. Content strands include number systems and algebraic thinking. Topics from these strands include rational number arithmetic, proportional reasoning, the symbolic language of algebra, and multiple representations to generalize relationships. Aligned with state and national standards, this course will emphasize problem solving, communication, reasoning, and representation in mathematics. Mathematical connections will be made to contextual problems and representations when appropriate. Prerequisite: grade of "C" or better in MTH 115 or declared math education major. Offered Fall, Spring.

+MTH 216 Cr.2

Mathematics for Middle School Teachers II

This course is designed for prospective elementary and middle school teachers. Content strands include geometry, statistics and probability. Topics from these strands include properties of geometric figures, congruence and similarity, concepts of measurement with attention to the meaning of measurement formulas, data analysis, and the calculations of probabilities for simple and compound events. Aligned with state and national standards, this course will emphasize problem solving, communication, reasoning, and representation in mathematics. Mathematical connections will be made to contextual problems and representations when appropriate. Prerequisite: grade of "C" or better in MTH 116 or declared math education major. Offered Fall, Spring.

MTH 225 Cr.4

Foundations of Advanced Mathematics

An introduction to mathematical reasoning. Mathematical logic, including quantification and the predicate calculus is introduced and used to discuss set theory, relations, functions, counting, graphs, and algorithms. Elementary proofs, including proofs by induction are stressed. Prerequisite: grade of "C" or better in MTH 175 or MTH 207. Course not open to those who have credit in CS 225. Offered Fall, Spring.

+MTH 265 Cr.4

Mathematical Models in Biology

An introduction to the use of calculus and stochastic based models to the biological sciences. Mathematical tools such as discrete and continuous differential equations, linear algebra, phase portraits, probability theory and descriptive and inferential statistics that are necessary to analyze and interpret biological models will be covered. Biological topics may include single species and interacting population dynamics, modeling infectious diseases, enzyme kinetics, and quantitative genetics. Prerequisite: grade of "C" or better in MTH 175 or MTH 207. Offered Spring.

MTH 280 Cr.3

Algebraic Reasoning and Problem Solving

A study of the mathematical processes and techniques that are used to solve a variety of routine and non-routine problems encountered in school mathematics. Emphasis is on communicating logical arguments, applying a variety of problem solving strategies, and developing mathematical models. Topics include investigations in number and algebraic relationships appropriate to the elementary and middle school classroom. Prerequisite: grade of "C" or better in MTH 135 and MTH 136. Offered Spring.

MTH 299 Cr.1

Mathematics and Statistics Tutor Training Practicum

This course is designed to offer training and supervision for tutors in the Murphy Learning Center. The course will include an overview of peer tutoring and learning theory, an overview of the general tutoring process, and an examination of best practices for tutoring various client populations. Students will develop a reflective tutoring practice based on readings and course discussions. The course must be taken during the student's first year of employment in the Learning Center. Failure to complete the course will result in termination from the Learning Center. Students who repeat the course will engage more deeply with the content and provide meaningful insights for their peers. Repeatable for credit - maximum three. Consent of instructor. Pass/Fail grading. Offered Fall, Spring.

MTH 308 Cr.4

Linear Algebra with Differential Equations

This course will study linear algebra with emphasis on computer programming and applications. Specific topics include systems of linear equations, matrix operations, linear independence, linear transformations, matrix factorization, vector spaces and subspaces in \mathbb{R}^n , basis and dimension, determinants, eigenvalues and eigenvectors, diagonalization, systems of first order linear differential equations, dynamical systems, inner products and orthogonality, least squares, and singular value decomposition. Software will be integrated throughout the course to complement mathematical content. Lect. 3, Lab. 1. Prerequisite: grade of "C" or better in MTH 208 or MTH 265 or (MTH 207 and CS 225 or MTH 225). CS 120 or concurrent enrollment highly recommended. Offered Fall, Spring.

MTH 309 Cr.4

Linear Algebra

This course is an introduction to the fundamental concepts of linear algebra. Topics include systems of linear equations, matrices, vector spaces, subspaces, basis and dimension, linear transformations and their matrix representations, similar matrices and diagonalization, projections and orthogonalization, and applications. In addition to computational proficiency, there is an emphasis on conceptual understanding of definitions and theorems, as well as the comprehension and construction of proofs. Prerequisite: grade of "C" or better in MTH 208; grade of "C" or better in MTH 225 or CS 225. Offered Fall, Spring.

MTH 310 Cr.4

Calculus III: Multivariable Calculus

A course in higher dimensional calculus, partial derivatives, and multiple integrals. Topics include parametric curves, polar (and other) coordinate systems, vector fields, scalar fields, the gradient vector, chain rule, Jacobian, Green's Theorem, Stokes' Theorem, and the Divergence Theorem. Prerequisite: grade of "C" or better in MTH 208. Offered Fall, Spring.

MTH 311 Cr.3

Number Theory

Topics are selected from such areas as: divisibility and factorization, congruence, distribution of prime numbers, and Diophantine equations. Problem-solving strategies and unsolved problems are stressed.

Applications are developed in related areas. Prerequisite: grade of "C" or better in MTH 225 or CS 225; grade of "C" or better in MTH 308 or MTH 309. Offered Spring.

MTH 315 Cr.3

Algebraic Structures for Middle and High School Teachers

This course explores the fundamental ideas of algebraic concepts and infinite processes in school mathematics. Content includes representing and solving equations and inequalities with emphasis on properties of real numbers; representing and analyzing functional relationships with emphasis on proportional, linear, quadratic, and exponential functions; evaluating and generalizing patterns of change and infinite processes with emphasis on sequences, series, limits, and derivatives. This content will be taught through a lens of mathematical argumentation, modeling, reasoning, and proof. Prerequisite: grade of "C" or better in MTH 150 or an appropriate placement test score; grade of "C" or better in MTH 215 or declared math education major. Offered Fall.

MTH 316 Cr.3

Geometry for Middle and High School Teachers

This course explores the fundamental ideas of measurement and geometry concepts in school mathematics. Content includes the analysis and classification of two- and three-dimensional geometric figures, the exploration and application of geometric transformations, tessellations, symmetry, congruence, and similarity as well as non-Euclidean geometry. This content will be taught through a lens of mathematical argumentation, modeling, reasoning, and proof. Prerequisite: grade of "C" or better in MTH 216 or declared math education major. Offered Spring.

MTH 317 Cr.3

Graph Theory

An introduction to graph theory-emphasizing algorithms. Topics include graphs and sub graphs, isomorphism, degree sequences, digraphs, networks, algorithm complexity and NP-completeness, trees, Euler circuits and Hamilton cycles, planarity and graph coloring. Prerequisite: CS 120; grade of "C" or better in MTH 225 or CS 225; grade of "C" or better in MTH 308 or MTH 309. Offered Fall.

MTH 320 Cr.3

History of Mathematics

This course studies the evolution of mathematics. It includes discussion and evaluation of major periods of development including the lives and works of preeminent mathematicians and a sampling of problem solving methods from various historical periods. Emphasis is on Western mathematics from earliest recorded history through the developments of calculus and modern mathematics. Prerequisite: grade of "C" or better in MTH 225 or CS 225 or concurrent enrollment. Offered Spring - Odd Numbered Years.

MTH 321 Cr.3

Teaching Mathematics with Technology

This course covers traditional, emerging, and interactive technologies used in the teaching and learning of mathematics. Teacher education candidates will gain an understanding of the use and application of instructional technology. They will explore how software, hardware, and instructional media can be used to enhance mathematics instruction in grades 4-12. Topics include instructional technology for visualizing and exploring mathematics, enhancing and delivering lessons, as well as interactive communication tools. Prerequisite: grade of "C" or better in MTH 175 or MTH 207; admission to teacher education or consent of instructor. Offered Spring.

MTH 331 Cr.3

Modern Geometry

This course is a study of the axiomatic foundations of two and three dimensional Euclidean geometry and two-dimensional non-Euclidean geometry. The course includes a thorough discussion of transformations and their use in congruency, similarity, and scaling of geometric figures through the use of geometric constructions, dynamic geometry software, axiomatic reasoning, and proof. This course will also focus on connecting course content with the content of secondary school geometry courses. Prerequisite: grade of "C" or better in MTH 225 or CS 225; grade of "C" or better in MTH 308 or MTH 309 or concurrent enrollment. Offered Occasionally.

MTH 353 Cr.3

Differential Equations

A first course on the modern study of differential equations including mathematical modeling and numerical solutions. Topics include the formulation of differential equations and interpretation of solutions, fundamental existence and uniqueness theory, first-order linear and separable equations, a dynamical systems approach to linear and nonlinear first order systems, numerical methods and qualitative analysis, and Laplace transforms. Applications and modeling of real world phenomena will be integrated throughout. Prerequisite: grade of "C" or better in MTH 308 or MTH 309; grade of "C" or better in MTH 310. Offered Fall, Spring.

MTH 362 Cr.3

Complex Variables

Introduction to complex numbers and functions of one complex variable. Topics include Cauchy–Riemann equations, Cauchy integral formula, power series, contour integrals, the residue calculus, conformal maps and applications. Prerequisite: grade of "C" or better in MTH 308 or MTH 309, grade of "C" or better in MTH 310. Offered Spring - Even Numbered Years.

MTH 371 Cr.3

Numerical Methods

This course introduces students to the formulation, methodology, and programming techniques for numerical solution of problems in science and engineering. Topics covered include: fundamental principles of digital computing, idea of approximation, algorithm accuracy and stability, the numerical solution of linear and nonlinear equations, numerical interpolation, differentiation and integration, spline functions, fundamentals of finite-difference solutions to ordinary differential equations, and error and convergence analysis. Optional topics include least-square method, Fourier series, Monte Carlo methods and linear programming. Prerequisite: CS 120; grade of "C" or better in MTH 308 or MTH 309. Offered Spring.

MTH 395 Cr.1-3

Special Topics in Mathematics

Special topics in mathematics not covered by regular courses taught in this department. The particular topic is decided mutually by the student and instructor. Repeatable for credit - maximum six. Consent of department. Offered Occasionally.

MTH 401 Cr.3

Survey of Advanced Mathematics

This course surveys the three pillars of modern theoretical mathematical knowledge - algebra, analysis, and topology - with an emphasis on interconnections among various college-level mathematics topics as well as the relationship between college-level and school mathematics. Prerequisite: grade of "C" or better in MTH 309; admission to teacher education. (Successful completion of MTH 407 or MTH 411 precludes taking MTH 401 for credit.) Offered Spring.

MTH 407 Cr.3

Real Analysis I

This course covers the basic theory underlying the differential and integral calculus. Convergence of sequences is examined. Theoretical concepts of calculus are examined and particular attention is given to writing proofs. Prerequisite: grade of "C" or better in MTH 225 or CS 225; grade of "C" or better in MTH 309 and MTH 310. Offered Fall.

MTH 408 Cr.3

Real Analysis II

This course covers convergence of series and basic theory of power series. Further study of real analysis via selected topics such as the theory of convergence, Lebesgue-Stieltjes integration, Fourier Analysis, probability theory, approximation theory and metric spaces. Prerequisite: grade of "C" or better in MTH 407. Offered Spring - Odd Numbered Years.

MTH 411 Cr.3

Abstract Algebra I

A rigorous approach to algebraic systems including the study of groups, rings, integral domains and fields with application to polynomials. Prerequisite: grade of "C" or better in MTH 225 or CS 225; grade of "C" or better in MTH 309. Offered Fall.

MTH 412 Cr.3

Abstract Algebra II

Continuation of MTH 411. Further study of rings, integral domains and fields. Prerequisite: grade of "C" or better in MTH 411. Offered Spring - Even Numbered Years.

MTH 415 Cr.3

Topology

An introduction to the study of topological spaces and their structure-preserving (continuous) functions. We develop concepts from point-set topology including methods of construction of topological spaces, continuity, connectedness, compactness, and Hausdorff condition. Prerequisite: grade of "C" or better in MTH 225 or CS 225, MTH 309, and MTH 310. Offered Spring.

MTH 421 Cr.4

Teaching and Learning Mathematics and Computer Science in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in mathematics and computer science. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 351; grade of "C" or better in MTH 321. Offered Fall, Spring.

MTH/BIO/CHM/PHY 451 Cr.2

Curriculum and Content in Science and Mathematics

This is a methods course for science education and mathematics education majors that focuses on how content knowledge and pedagogical content knowledge are used to inform instruction. The course will focus on exploration of state and national standards, academic language, and methods of assessment. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/MTH/PHY 454 or BIO/CHM/MTH/PHY 455; admission to teacher education. (Cross-listed with BIO/CHM/MTH/PHY; may only earn credit in one department.) Consent of instructor. Offered Spring.

MTH 452 Cr.2

The Learner and Learning in Mathematics

This is a methods course for mathematics education majors that focuses on learning theories, equitable practices, and culturally relevant pedagogy. The course will draw on recommendations from state and national standards. Prerequisite: EDS 203, EDS 206; concurrent enrollment in MTH 454 or MTH 455; admission to teacher education. Consent of instructor. Offered Fall.

MTH 454 Cr.2

Field Experience I in Mathematics Education

This course is the first field experience in a school environment. Candidates will plan and teach lessons within the designated grade range of 4-12. Candidates will be introduced to classroom management and conflict resolution. A multi-day, consistent schedule in the middle or high school field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203, EDS 206; concurrent enrollment in MTH 451 or MTH 452; admission to teacher education. Consent of instructor. Offered Fall, Spring.

MTH 455 Cr.2

Field Experience II in Mathematics Education

This course is the second field experience in a school environment. Candidates will plan and teach lessons within the designated grade range of 4-12. Candidates will be introduced to classroom management and conflict resolution. A multi-day, consistent schedule in the middle or high school field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203, EDS 206; concurrent enrollment in MTH 451 or MTH 452; admission to teacher education. Consent of instructor. Offered Fall, Spring.

MTH 460 Cr.3

Capstone on Teaching and Learning Mathematics for Secondary Teachers

The course is designed to help teacher candidates make connections between advanced undergraduate mathematics and mathematical content taught at the middle and secondary levels. In doing so, this course aims to provide students with a deeper conceptual foundation for the content they will be teaching. Prerequisite: grade of "C" or better in MTH 309 or concurrent enrollment; MTH 315, MTH 316; admission to teacher education; junior standing. Consent of instructor. Offered Fall.

MTH/PHY 461 Cr.3

Mathematical Physics

In depth study of topics from vector analysis, Fourier analysis and special functions with emphasis on modeling physical phenomena involving conservative fields, fluid flow, heat conduction, and wave motion. MTH 461 may be counted towards both a MTH and PHY major. Prerequisite: grade of "C" or better in MTH 353. (Cross-listed with MTH/PHY; may only earn credit in one department.) Offered Spring - Odd Numbered Years.

MTH 479 Cr.1-3

Mathematics/Statistics Teaching Assistant

This courses provides an opportunity for students to work with a faculty member and assist with the instruction of a mathematics or statistics course. Specific activities may include preparation of materials, classroom instruction, and assessment. Repeatable for credit- maximum six. Consent of instructor. Offered Fall, Spring, Summer.

MTH 480 Cr.3

Studies in Applied Mathematics

Advanced studies of applications of mathematics and computation to solve problems and understand processes from a variety of fields (for example, industry, medicine and the physical and life sciences.) Requirements include an application/ modeling project with a written report and class presentation. Prerequisite: grade of "C" or better in MTH 353. Offered Spring - Even Numbered Years.

MTH 495/595 Cr.1-3

Special Topics in Mathematics

Special topics in mathematics not covered by regular courses taught in this department, such as topology, set theory and advanced numerical analysis. The particular topic is decided mutually by the students and the instructor. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/ expectations. Repeatable for credit - maximum six. Prerequisite: junior standing. Consent of department. Offered Occasionally.

MTH 498 Cr.1-3

Independent Study

Directed readings or presentation of material not available in formal departmental courses under the supervision of a faculty member. Registration by written consent of supervising faculty member and department chair. Repeatable for credit - maximum six. Consent of department. Offered Occasionally.

MTH 499 Cr.1-3

Research Topics

An opportunity to pursue individual research topics under the direction of a faculty member. Depending on the nature of the research project, study is expected to involve substantial computational or theoretical work in addition to literature review and instruction. In addition to a written report to the supervising faculty member, expected outcomes may include: software, papers and presentations to the department and regional meetings. Not applicable to a mathematics major or minor. Registration by written consent of supervising faculty member. Repeatable for credit - maximum six. Consent of department. Offered Occasionally.

Microbiology (MIC) - Courses

Courses

+MIC 100 Cr.4

Microbes and Society

Microbiology plays an integral role in human affairs and our daily lives. Some microorganisms have caused tremendous suffering throughout history, however many microbes have also provided countless benefits to humans and play vital roles in essential global cycles. This course examines the science of microbiology and the impact of microbiology on human affairs. The principles of microbial diversity, cell structure, growth and reproduction, global processes, disease, and prevention of disease are covered. Each topic provides a basis for discussion of current issues where microorganisms play a role. The laboratory provides an inquiry based approach to examining the diversity of microorganisms and their role in disease, spoilage, genetic engineering, food and antibiotic production, agriculture, and the environment. Lect. 3, Lab 2. Offered Fall, Spring.

+MIC 130 Cr.3

Global Impact of Infectious Disease

A multifaceted examination of issues related to infectious disease throughout the world. The course will begin with historical examples of how infectious disease has impacted society, from plagues of centuries past to recent emerging diseases. After defining the types of pathogens and methods for their control, the interplay between infectious disease and global economics, health and politics will be evaluated. Additionally, the impact of public perceptions and misconceptions on the spread of infectious disease will be analyzed. Finally, the role of current human activities in shaping disease patterns of the future will be explored. Offered Fall, Spring, Summer.

MIC 230 Cr.4

Fundamentals of Microbiology

An introduction to the fundamental principles and applications of microbiology with an emphasis on the role of microorganisms, especially bacteria, in human affairs. Lecture topics include microbial diversity, cell structure and function, growth and metabolism, genetics, genetic engineering, control of microbial growth, host-parasite interactions, immunology, microbial ecology and applied microbiology. Laboratory emphasis is on methods used to cultivate and identify bacteria, genetic techniques, and on standard techniques used in applications of microbiology (clinical, food, industrial, and aquatic). Lect. 2, Lab 4. Prerequisite: BIO 105; CHM 103. Offered Fall, Spring.

MIC 260 Cr.1-3

Topics in Microbiology

Varying topics in microbiology with a specific title assigned to each. Offered by resident faculty or visiting lecturers. Repeatable for credit - maximum six. Prerequisite: MIC 230. Offered Occasionally.

MIC 299 Cr.1-2

Introduction to Microbiology Research

An opportunity to participate in laboratory or field research experience under the direction of a faculty member. Depending on the nature of the research project, study will involve participation in laboratory or theoretical work in addition to selected readings and instruction. A written report to the supervising faculty member is an expected outcome. Completion of safety training required prior to beginning research. Admission with instructor and department approval. Repeatable for credit - maximum four. Consent of instructor. Offered Fall, Winter, Spring, Summer.

MIC 310 Cr.3

Immunology

Fundamentals of immune system structure and function. Includes response to infectious agents, as well as vaccination, allergy, autoimmune disease, cancer, organ transplantation, immune deficiency and related public health issues. Prerequisite: MIC 100 or BIO 105 with a grade of "C" or better; one 200 level or higher biology or microbiology course. Offered Fall, Spring.

MIC 350 Cr.3

Bacterial Diversity

A survey of the bacteria. Lectures will cover bacterial classification and the structure, physiology, ecology, and applications of various groups of bacteria. Special emphasis will be on the more unique species and those of industrial, ecological and environmental importance. The laboratory will involve enrichment and isolation procedures for selective groups of bacteria. Lect. 2, Lab 3. Prerequisite: MIC 230. Offered Spring, Fall-Odd # Years.

MIC 380 Cr.4

Food Microbiology

A study of environmental factors affecting the growth, activity, and destruction of microorganisms in food; principles of food spoilage; preservation of foods, including basic methods and their application to foods; food-borne intoxications and infections; indicator organisms; sanitation and microbiological standards in foods. Laboratory instruction includes quality control methods, sampling methods, techniques to identify important microorganisms in foods, and data interpretation and analysis. Lect. 2, Lab 4. Prerequisite: MIC 230. Offered Spring.

MIC 407/507 Cr.4

Pathogenic Bacteriology

The study of pathogenic bacteria and their relationships to disease, principles of infection and pathogenesis, and unique properties of pathogens. Laboratory emphasis is on techniques for isolation and identification of pathogenic bacteria. Not applicable to biology major; may be applied to the microbiology, clinical laboratory science major and/or degree as well as an elective for the biology biomedical concentration. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 4. Prerequisite: MIC 230; junior standing. Offered Fall, Spring.

MIC 410/510 Cr.2

Immunology Laboratory

Designed as an introduction to immunology techniques used in clinical and research laboratories. Includes antibody-based diagnostic tests such as ELISA and Western blot. Cell-based techniques include lymphocyte culture and flow cytometry. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lab 4. Prerequisite: MIC 310 or concurrent enrollment; junior standing. Offered Fall, Spring.

MIC 416/516 Cr.4

Prokaryotic Molecular Genetics

This course provides an in-depth study of the Central Dogma including DNA replication, transcription, and translation. In addition, specific focus is on mechanisms of gene exchange in prokaryotes including transformation (natural and artificial), conjugation, and transduction (including bacteriophage biology). Other topics covered include genetic terminology, recombination and transposition, mutagenesis and repair, and gene regulation. Laboratory emphasis is on bacterial mutagenesis, genetic exchange and cloning techniques. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Dis. 1, Lab 3. Prerequisite: MIC 230; additional 300 or higher level MIC course with a lab; junior standing. Consent of instructor. Offered Fall.

MIC 420/520 Cr.3

Introductory Virology

An introduction to viruses and their interactions with host organisms. Special emphasis is placed on the structure and replication cycles of virus families with medical importance. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: MIC 230; MIC 416 or BIO 306 or BIO 435; junior standing; three semesters of college chemistry to include organic chemistry. Offered Spring.

MIC 421/521 Cr.2

Virology Laboratory

A laboratory course designed to introduce fundamental techniques used to study viruses in medicine, biotechnology and research. Emphasis is on procedures used to safely handle viruses, grow them in tissue culture, and the molecular biological, biochemical and immunological techniques used to detect and analyze viruses. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lab 4. Prerequisite: MIC 230; MIC 416 or concurrent enrollment, or BIO 306; three semesters of college chemistry to include organic chemistry; junior standing. Offered Fall.

MIC 425/525 Cr.4

Bacterial Physiology

An in-depth study of bacterial structure and function, catabolic and anabolic pathways, regulation, and macromolecular synthesis. Laboratory emphasizes techniques used to examine bacterial structure and metabolism, such as macromolecular separations and quantification, use of radioisotopic tracers and quantification of enzyme activity. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 3, Disc. 1. Prerequisite: MIC 230; additional level 300 or higher MIC course with a lab; MTH 150 or higher; CHM 300 or CHM 303; junior standing. Offered Spring.

MIC 427/527 Cr.3

Industrial and Fermentation Microbiology

A study of microbiology and biochemistry of food fermentations; bioconversions; production of antibiotics, vitamins, amino acids and organic acids. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: MIC 230, CHM 104; junior standing. Offered Fall - Odd Numbered Years.

MIC 428/528 Cr.2

Fermentation Microbiology Laboratory

Principles of fermentation science and biotechnology with emphasis on industrial and food fermentation processes. Laboratory emphasis is on the use of various fermentation systems that generate useful products including fermented food and beverages, pharmaceuticals, chemicals and other gene products. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lab. 4. Prerequisite: MIC 230, CHM 104; junior standing. Offered Alternate Years.

MIC 434/534 Cr.3

Aquatic Microbial Ecology

An ecological study of bacteria, cyanobacteria and algae of aquatic ecosystems. Topics include microbial strategies for survival under various environmental conditions, the role of microorganisms in biogeochemical cycling of elements, interactions of microorganisms with other aquatic biota, the role of microorganisms in pollution problems, and applications of microbial ecology to biotechnology. Laboratory emphasis is on experimental design and sampling techniques, quantification of microbial biomass, and measurement of microbial activities in aquatic habitats. One weekend field trip required. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 3. Prerequisite: MIC 230; three semesters of college chemistry; junior standing. BIO 341 strongly recommended. Offered Fall - Even Numbered Years.

MIC/BIO 440/540 Cr.2

Bioinformatics

In this course, students will use computers to study and compare the sequence of nucleotides in DNA or RNA, or the amino acids in a protein. Computers are also used to examine the three dimensional structure of protein. Being able to manipulate and study this information is the basis for the current revolution in biotechnology. Topics include evolution, taxonomy, genomics and understanding disease. This course provides students an opportunity to explore the relationships between biology, microbiology, chemistry and computer science. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 1, Lab 2. Prerequisite: BIO 306 or MIC 416; junior standing. (Cross-listed with BIO/MIC, may only earn credit in one department.) Offered Spring, Winter.

MIC/BIO 442/542 Cr.3

Plant Microbe Interactions

This course will explore in depth various ways that plants interact with microbes in the environment, at the macroscopic, cellular, and molecular levels. Case studies will include both parasitic and mutualistic (symbiotic) interactions. Microbes include fungi, bacteria, nematodes, and viruses. Includes plant pathology and studies of the beneficial relationships between plants and microbes. Inquiry based labs are integrated into the lecture and discussion sessions. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Lect. 2, Lab 2. Prerequisite: BIO 203 or BIO 304; MIC 230; junior standing. (Cross-listed with BIO/MIC, may only earn credit in one department.) Offered Fall - Odd Numbered Years.

MIC 450 Cr.1-3

Internship in Microbiology

An academically relevant field experience in government, industry, business or community agencies. Students must have their internships approved and be advised by the department. Students must be on their internship work site during the semester for which they are registered for academic credit. Repeatable for credit - maximum eight. Maximum of two credits applicable to major. Consent of department. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

MIC 454/554 Cr.2

Mechanisms of Microbial Pathogenicity

The study of mechanisms of microbial pathogenicity including both overt microbial factors and complex interactions with the host that produce symptoms of disease. The cellular, biochemical, molecular, and genetic bases for modern understanding of microbial disease will be included. This course is taught largely at a graduate level. Prerequisite: MIC 310 or equivalent; MIC 407 or equivalent; junior standing. Offered Spring - Odd Numbered Years.

MIC 460/560 Cr.1-3

Symposium in Microbiology

Varying topics in microbiology with a specific title assigned to each. Offered by resident faculty or visiting lecturers. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit - maximum six. Prerequisite: MIC 230; junior standing. Offered Occasionally.

MIC 461 Cr.1

Capstone in Microbiology

A seminar-style course designed for students to review and discuss basic concepts necessary for a career in microbiology and to assess their major. This course will cover basic concepts of quantitative skills, computer literacy, and current topics microbiology. Students are expected to actively participate in an assessment of their major, and participate in discussions on major issues and developments in the microbiological sciences. Students will present a seminar on a contemporary microbiological topic incorporating primary literature. Prerequisite: senior standing; must have completed all core microbiology classes by the end of the semester for which one is enrolling. Offered Fall, Spring.

MIC 479 Cr.1-2

Microbiology Laboratory Assistant

An opportunity to assist in the preparation and instruction of a microbiology laboratory. Students will be expected to assist in preparation of course materials, demonstrate proper techniques, and evaluate student performance. Completion of safety training required. Repeatable for credit - maximum four. Consent of instructor. Pass/Fail grading. Offered Fall, Spring, Summer.

MIC 489 Cr.1-2

Independent Study in Microbiology

A directed reading/project course covering a standard body of knowledge within the discipline but outside that offered through regularly scheduled courses. Under the direction of the supervising faculty member, study may involve a review of current literature. A written report or project is an expected outcome. Completion of safety training required prior to beginning a laboratory or field-based project. Admission with instructor and department approval. Repeatable for credit - maximum four. Consent of department. Offered Fall, Winter, Spring, Summer.

MIC 499 Cr.1-10

Independent Research in Microbiology

An opportunity to pursue individual research topics under the direction of a faculty member. Depending on the nature of the research project, study is expected to involve substantial laboratory or theoretical work in addition to literature review and instruction. Students are expected to develop research skills related to microbiology. In addition to a written report to the supervising faculty member, expected outcomes may include: laboratory notebooks, experimental devices, software, papers and presentations to departments and regional meetings. Completion of safety training required prior to beginning research. Admission with instructor and department approval. Repeatable for credit - maximum 10. Two credits apply to the major. Consent of department. Offered Fall, Winter, Spring, Summer.

Military Science (MS) - Courses

Courses

MS 101 Cr.2

Introduction to the Army

This course focuses on introduction to the Army and critical thinking. It introduces cadets to the Army and the profession of arms. Students will examine the Army profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a complete understanding of the Reserve Officers' Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also learn how resiliency and fitness supports their development as an Army leader. Includes a weekly lab facilitated by MSL III Cadets and supervised by Cadre personnel. Lect. 1, Lab 2. Prerequisite: first year or sophomore standing. Junior or senior standing requires consent of department. Offered Fall.

MS 102 Cr.2

Foundations of Agile and Adaptive Leadership in the Army

This course introduces students to the personal challenges and competencies that are critical for effective leadership. Cadets learn how the personal development of certain life skills such as critical thinking, time management, goal setting and communication affect their daily life and interactions with peers, teams and leaders. Students learn the basics of the communications process and the importance for leaders to develop the essential skills to effectively communicate in the Army. Students will begin learning the basics of squad level tactics. Prerequisite: MS 101; first year or sophomore standing. Junior or senior standing requires consent of department. Offered Spring.

MS 201 Cr.2

Leadership and Decision Making

This course focuses on leadership and decision making. The outcomes are demonstrated through critical and creative thinking and the ability to apply Troop Leading Procedures (TLP) innovative solutions to problems. The Army profession is also stressed through leadership forums and a leadership self-assessment. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during a weekly lab facilitated by MSL III and IV Cadets and supervised by Cadre personnel. Lect. 1, Lab 2. Prerequisite: MS 102; first year or sophomore standing. Junior or senior standing requires consent of department. Offered Fall.

MS 202 Cr.2

Army Doctrine and Team Development

This course focuses on Army doctrine and team development. The course begins the journey to understand and demonstrate competencies as they relate to Army doctrine. Army Values, Teamwork, and Warrior Ethos and their relationship to the Law of Land Warfare and philosophy of military service are also stressed. The ability to lead and follow is also covered through team building exercises at squad level. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during a weekly lab facilitated by MS III and IV Cadets and supervised by Cadre personnel. Prerequisite: MS 201; first year or sophomore standing. Junior or senior standing requires consent of department. Offered Spring.

MS 301 Cr.3

Training Management and the Warfighting Functions

This is an academically challenging course where you will study, practice, and apply the fundamentals of Army leadership, officership, Army values and ethics, personal development, and small unit tactics at the platoon level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a squad and platoon in the execution of a mission during a classroom PE, a leadership lab, or during a Leader Training Exercise (LTX). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills that can further develop you into a successful officer. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies and practical exercises, a midterm exam, and a final exam. You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your instructor, other ROTC cadre, and MS IV Cadets. Prerequisite: MS 202. Offered Fall.

MS 302 Cr.3

Applied Leadership in Small Unit Operations

This is an academically challenging course where you will study, practice, and apply the fundamentals of Army leadership, officership, Army values and ethics, personal development, and small unit tactics at the platoon level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a squad and platoon in the execution of a mission during a classroom PE, a leadership lab, or during a Leader Training Exercise (LTX). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills that can further develop you in to a successful officer. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies and practical exercises, a mid-term exam, and a final exam. You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your instructor, other ROTC cadre, and MSL IV Cadets. Prerequisite: MS 301. Offered Spring.

MS 401 Cr.3

The Army Officer

This course focuses on development of the Army officer. It is an academically challenging course where you will develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. You will also learn about Army programs that support counseling subordinates and evaluating performance, values and ethics, career planning, and legal responsibilities. At the conclusion of this course, you will be familiar with how to plan, prepare, execute, and continuously assess the conduct of training at the company or field grade officer level. The course includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre. Prerequisite: MS 302. Offered Fall.

MS 402 Cr.3

American Military History

A historical review and analysis of the development of military strategy and weapons; a detailed study of the history of the United States military; an analysis of contemporary, post-World War II issues; and a study of selected battles. Offered Fall, Spring.

MS 403 Cr.3

Company Grade Leadership

This is an academically challenging course where you will study, practice, develop, and apply critical thinking skills pertaining to Army leadership, officership, Army values and ethics, personal development, and small unit tactics at platoon level. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, practical exercises, mid-term exam, and a capstone exercise in place of the final exam. For the capstone exercise, you will be required to complete an oral practicum where you will be evaluated on your knowledge of the 20 Army Warfighting Challenges (AWFC) covered throughout MS 401 and MS 402 coursework. In addition, you will be assessed on leadership abilities during classroom PE, leadership labs, or Leader Training Exercises (LTX). You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your cadre, PMS, and other MS IV Cadets who will evaluate you using the Cadet Officer Evaluation Report (COER). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills. At the conclusion of this course, you will be able to plan, coordinate, navigate, motivate and lead a platoon in future operational environments. Successful completion of this course will assist in preparing you for your BOLC B course and is a mandatory requirement for commissioning. Prerequisite: MS 401. Offered Spring.

MS 499 Cr.1-3

Independent Studies in Military Science

Students design individual plans of study in consultation with a MS faculty member. Designed for MS students who have excellent records in the department. Repeatable for credit - maximum three. Consent of department. Offered Occasionally.

Mindfulness (MIND) - Courses

Courses

+MIND 110 Cr.3

Introduction to Mindfulness

This course introduces students to key components of mindfulness and contemplative literature, history, and practices. Students will explore multiple perspectives informed by the sciences and humanities. Emphasizing the benefits of mindfulness practices at both individual and interpersonal levels, this course is experience-based and centers around developing the practical skills of meditation and awareness. Participants are expected to engage in a personal practice that is relevant and meaningful to their academic, personal, and/or career goals. Ultimately, this course will facilitate expanded self-awareness, enhanced social connectivity, and purposeful engagement in students' studies, lives, and future careers. Offered Fall, Spring.

Music (MUS) - Courses

Courses

+MUS 100 Cr.1

Screaming Eagles Marching Band I

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Not repeatable for credit. Offered Fall.

+MUS 103 Cr.1

Concert Band I

This course is a large ensemble open to students in all schools and colleges with experience in band. Not eligible toward music major or minor. Repeatable for credit - maximum two. Offered Fall.

+MUS 105 Cr.2

Music Appreciation

The Western classical tradition. A survey of the forms and styles within each period since the Baroque. Emphasis on the content of specific masterpieces to enhance perceptive learning. Not applicable to major or minor. Prerequisite: Not open to students with credit in MUS 110. Offered Fall, Spring.

+MUS 106 Cr.1

Concert Choir I

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Offered Fall, Spring.

+MUS 110 Cr.3

The Listening Experience in Music

An introductory course to music listening, with emphasis on methods of perceiving and understanding musical information. Topics include factors in listening, recognition of musical elements and other concepts which contribute to aural perception, and understanding the influence of musical context. The course content will include representative examples of world music, compositions by women, and representative music from the Western classical tradition. Not applicable to major or minor. Prerequisite: Not open to students with credit in MUS 105. Offered Fall, Spring.

+MUS 115 Cr.4

Musical Elements: Language and Systems

Like modern languages, music employs a distinct vocabulary and set of rules. Musical language and the systems developed in it will be explored and studied including types of notation, syntax and style. Temporal, harmonic and melodic structures such as phrases, cadences and simple forms as well as the basic vocabulary will be discussed in relation to communicating and interpreting music by written and aural means. This course is for students with little to no music background and does not apply to any music major or minor. Lect. 3, Lab 2. Prerequisite: not open to any declared music major or minor. Offered Fall.

+MUS 123 Cr.1

Treble Chorus I

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Offered Fall, Spring.

MUS 130 Cr.1

Jazz Orchestra I

Small ensemble open to students in all schools and colleges with consent of instructor. Requires concurrent enrollment in a large ensemble for music education majors: MUS 106/206/306/406 (Concert Choir), MUS 123/223/323/423 (Treble Chorus), MUS 158/258/358/458 (Choral Union), if choral and general music education major. MUS 100/200/300/400 (Marching Band), MUS 144/244/344/444 (Symphonic Band), MUS 156/256/356/456 (Orchestra), MUS 140/240/340/440 (Wind Symphony), if instrumental and general music education major. A maximum of two credits in all small ensembles may be applied to the music major. Repeatable for credit - maximum two. Offered Fall, Spring.

+MUS 134 Cr.1

Jazz Ensemble I

Small ensemble open to students in all schools and colleges with consent of instructor. Requires concurrent enrollment in a large ensemble for music education majors: MUS 106/206/306/406 (Concert Choir), MUS 123/223/323/423 (Treble Chorus), MUS 158/258/358/458 (Choral Union), if choral and general music education major. MUS 100/200/300/400 (Marching Band), MUS 144/244/344/444 (Symphonic Band), MUS 156/256/356/456 (Orchestra), MUS 140/240/340/440 (Wind Symphony), if instrumental and general music education major. A maximum of two credits in all small ensembles may be applied to the music major. Repeatable for credit - maximum two. Offered Fall, Spring.

+MUS 140 Cr.1

Wind Ensemble I

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Offered Fall, Spring.

MUS 143 Cr.1

Class Voice I

This course provides group instruction on voice requiring little or no formal training in singing. The course is designed to develop each student's singing voice and the ability to sing successfully in front of others. During the course of study, the fundamentals of healthy vocal production will be addressed including proper posture, breathing, tone production, expression, and gaining confidence. Students will be singing together as well as individually for class. Prerequisite: declared major in music education: instrumental and general emphasis. Offered Fall.

MUS 144 Cr.1

Symphonic Band I

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Not repeatable for credit. Offered Spring.

MUS 146 Cr.1

Keyboard Competencies I

This course is designed to prepare students to use the piano as a functional vehicle of expression and as an accompanying instrument. Emphasis will be given to developing physical coordination of keyboard performance skills, building basic piano technique and basic keyboard theory, harmonizing melodies with given chord symbols and by ear, and reading simple piano literature in traditional music notation. Lect. 1, Lab 1. Prerequisite: music major or minor, or concurrent registration in MUS 235. Offered Fall - Even Numbered Years.

MUS 147 Cr.1

Keyboard Competencies II

This course is designed to prepare students to use the piano as a functional vehicle of expression and as an accompanying instrument. From performance level attained in Keyboard I, students will continue developing physical coordination of keyboard performance skills, building basic technique, applying keyboard theory and harmonizing melodies. Primary emphasis will be to increase performance ability at first sight through practice strategies, musical analysis and several pieces of piano literature. Lect. 1, Lab 1. Prerequisite: MUS 146 or consent of instructor. Offered Fall - Even Numbered Years.

MUS 148 Cr.1

Keyboard Competencies III

This course is designed to prepare students to use the piano as a functional vehicle of expression and as an accompanying instrument. Having achieved basic piano technique and reading skills, the emphasis in this course will be to expand the use of the keyboard in practical music education contexts: accompaniments, multiple staff (score) reading and transposition. Students will have opportunities to articulate practice strategies and to assess performances. Practical situations which call for modification of the printed score will also be addressed. Lect. 1, Lab 1. Prerequisite: MUS 146 or consent of instructor. Offered Spring - Odd Numbered Years.

MUS 149 Cr.1

Keyboard Competencies IV

This course prepares music education students to address standards for keyboard competency as stipulated by National Association of Schools of Music (NASM) standards. All activities in the course will be driven by practical situations in the classroom using keyboard skills. These skills include demonstration of keyboard technique (scales, chord progressions), folk song accompaniments, transposition of melodies to other keys, score reading (choral or instrumental ensembles) and performance of accompaniments with appropriate stylistic considerations. Prerequisite: MUS 148 or consent of instructor. Offered Spring - Even Numbered Years.

+MUS 156 Cr.1

Orchestra I

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Offered Fall, Spring.

+MUS 158 Cr.1

Choral Union I

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Offered Fall, Spring.

MUS 161 Cr.1

Ensembles

Small ensemble open to students in all schools and colleges with consent of instructor. Requires concurrent enrollment in a large ensemble for music education majors: MUS 106/206/306/406 (Concert Choir), MUS 123/223/323/423 (Treble Chorus), MUS 158/258/358/458 (Choral Union), if choral and general music education major. MUS 100/200/300/400 (Marching Band), MUS 144/244/344/444 (Symphonic Band), MUS 156/256/356/456 (Orchestra), MUS 140/240/340/440 (Wind Symphony), if instrumental and general music education major. A maximum of two credits in all small ensembles may be applied to the music major. Repeatable for credit - maximum two. Offered Fall, Spring.

MUS 173 Cr.1

Class Voice II

This course is a continuation of Class Voice I group instruction on voice. The course is designed to improve each student's singing voice and further develop the ability to sing successfully in front of others. Individual vocal problems will be assessed, and exercises will be given to improve and strengthen the voice. Students will be singing together as well as individually for class. Prerequisite: MUS 143. Offered Spring.

MUS 200 Cr.1

Screaming Eagles Marching Band II

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Not repeatable for credit. Prerequisite: MUS 100. Offered Fall.

MUS 203 Cr.3

Foundations of Music Education

This is a pedagogy course introducing the methodology of teaching in music education. This course will give an overview of choral, general, and instrumental music education while including philosophical, social, and psychological foundations of teaching music. This course focuses on the methods of planning instruction for student learning, including alignment of objectives, instructions, assessment, and tasks. Utilizing the National Core Music Standards, teacher candidates will begin creating developmentally appropriate lesson plans. Interstate Teacher Assessment and Support Consortium (InTASC) Standards are introduced to create developmentally appropriate instruction and advocacy in music education. Prerequisite: MUS 266, MUS 268; sophomore standing. Offered Spring.

+MUS 205 Cr.3

Global Cultures in Music

This course surveys the selected musical traditions of the world. By looking at selected communities in detail, students will better understand that music is, in most cases, connected to culture and cannot be understood without an awareness of cultural contexts. Students will also develop a musical vocabulary and listening skills through exposure to recordings, lectures and assignments about stylistic elements, and analysis. The ability to read music is not required for the course, but it is helpful. The lectures will be supplemented with sound recordings, and will include in-class demonstrations when possible. Offered Fall, Spring, Summer.

MUS 206 Cr.1

Concert Choir II

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 106; sophomore standing. Offered Fall, Spring.

+MUS 209 Cr.3

History of Jazz Culture

A chronological study of the history of jazz from its African/Creole roots to the present with emphasis on ethnic cultural contributions and innovations through listening and selected readings. Offered Fall, Spring.

MUS 211 Cr.2

Basic Conducting

Development of the physical and mental skills necessary for accurate beat patterns, cueing, fermatas, cut-offs, accerlandos and ritardandos. Emphasis is placed on body posture, body language, eye contact, accurate tempos and dynamics. A basic knowledge of musical terms is required along with the ability to use them to teach the aesthetic qualities of music. Lect. 1, Lab 2. Prerequisite: MUS 266. Offered Fall - Odd Numbered Years.

MUS 213 Cr.1

Class Ukulele and Guitar

In this course students concentrate on developing skills necessary for the use of ukulele and guitar in the elementary and middle school classroom, including a variety of ways the instrument may be used to accompany singing as well as in solo capacities. Prerequisite: MUS 266. Offered Fall - Even Numbered Years.

MUS 214 Cr.2

String Techniques

This course provides group instruction on violin, viola, cello, and string bass. It is primarily for students planning to teach music. Lect. 1, Lab 2. Prerequisite: MUS 266, MUS 268. Offered Fall - Odd Numbered Years.

MUS 220 Cr.2

Brass Techniques

This course provides group instruction on trumpet, horn, trombone, euphonium, and tuba. It is primarily for students planning to teach music. Lect. 1, Lab 2. Prerequisite: MUS 266, MUS 268. Offered Spring - Odd Numbered Years.

MUS 223 Cr.1

Treble Chorus II

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 123; sophomore standing. Offered Fall, Spring.

MUS 225 Cr.2

Percussion Techniques

This course provides group instruction on snare drum, timpani, keyboard mallets, auxiliary percussion, Latin percussion and drum set. It is primarily for students planning to teach music. Lect. 1, Lab 2. Prerequisite: MUS 266, MUS 268. Offered Fall - Even Numbered Years.

MUS 227 Cr.3

Woodwind Techniques

This course provides group instruction on flute, clarinet, oboe, bassoon, and saxophone. It is primarily for students planning to teach music. Lect. 2, Lab 2. Prerequisite: MUS 266, MUS 268. Offered Spring - Even Numbered Years.

MUS 230 Cr.1

Jazz Orchestra II

Small ensemble open to students in all schools and colleges with consent of instructor. Requires concurrent enrollment in a large ensemble for music education majors: MUS 106/206/306/406 (Concert Choir), MUS 123/223/323/423 (Treble Chorus), MUS 158/258/358/458 (Choral Union), if choral and general music education major. MUS 100/200/300/400 (Marching Band), MUS 144/244/344/444 (Symphonic Band), MUS 156/256/356/456 (Orchestra), MUS 140/240/340/440 (Wind Symphony), if instrumental and general music education major. A maximum of two credits in all small ensembles may be applied to the music major. Repeatable for credit - maximum two. Prerequisite: MUS 130; sophomore standing. Offered Fall, Spring.

MUS 234 Cr.1

Jazz Ensemble II

Small ensemble open to students in all schools and colleges with consent of instructor. Requires concurrent enrollment in a large ensemble for music education majors: MUS 106/206/306/406 (Concert Choir), MUS 123/223/323/423 (Treble Chorus), MUS 158/258/358/458 (Choral Union), if choral and general music education major. MUS 100/200/300/400 (Marching Band), MUS 144/244/344/444 (Symphonic Band), MUS 156/256/356/456 (Orchestra), MUS 140/240/340/440 (Wind Symphony), if instrumental and general music education major. A maximum of two credits in all small ensembles may be applied to the music major. Repeatable for credit - maximum two. Prerequisite: MUS 134; sophomore standing. Offered Fall, Spring.

MUS 240 Cr.1

Wind Ensemble II

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 140; sophomore standing. Offered Fall, Spring.

MUS 244 Cr.1

Symphonic Band II

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Not repeatable for credit. Prerequisite: MUS 144. Offered Spring.

MUS 249 Cr.1

Piano Sight Reading

This course is intensely focused on reading piano music at sight. While the majority of the course provides opportunities to read/perform new music at sight, strategies to improve initial sight-reading skills will be given on a regular basis. Lect.1, Lab 1. Prerequisite: MUS 149. Offered Fall - Odd Numbered Years.

MUS 256 Cr.1

Orchestra II

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 156; sophomore standing. Offered Fall, Spring.

MUS 258 Cr.1

Choral Union II

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 158; sophomore standing. Offered Fall, Spring.

MUS 264 Cr.3

History of Western Music I

A chronological study of music in Western civilization with emphasis on periods and styles from early times to the death of Bach. Outside listening required. Prerequisite: MUS 115 or minimum score of 3 on AP music exam or Music Department Theory assessment milestone. Offered Annually.

MUS 266 Cr.3

Theory of Music I

This course is an introduction to basic music theory concepts. The harmonic, melodic and formal aspects of common practice music are studied. Topics include counterpoint and the management of dissonance, harmonic function of seventh chords and secondary harmonies, analysis of harmony and form, modulation and formal design. The students will develop skills in composition and analysis within the framework of the historical context of the techniques and characteristics of music from the music of the Renaissance to the 20th century. Prerequisite: MUS 115 or minimum score of 3 on AP music exam or Music Department Theory assessment milestone; concurrent enrollment in MUS 268. Offered Fall.

MUS 268 Cr.1

Aural Skills I

This course will aurally train students in the basic skills of music and reinforce the concepts learned in Theory I by singing scales, intervals, harmonies and melodies at sight using solfege and aurally recognizing these elements as well as meters, rhythms and formal structures. The class involves in class activities and outside of class lab activities using current Computer Aided Instruction (CAI) technology. Prerequisite: MUS 115 or minimum score of 3 on AP music exam or Music Department Theory assessment milestone; concurrent enrollment in MUS 266. Offered Fall.

MUS 300 Cr.1

Screaming Eagles Marching Band III

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Not repeatable for credit. Prerequisite: MUS 200. Offered Fall.

MUS/THA 304 Cr.3

History of Music Theatre

A survey of music theatre history and literature from origins to the present and its effect on popular culture, this course provides an understanding of the development of music theatre into the present day. Particular attention is given to the writers and composers who greatly influenced and/or continue to influence the development of this art form. Prerequisite: ENG 110 or ENG 112. (Cross-listed with MUS/THA; may only earn credit in one department.) Offered Spring - Odd Numbered Years.

MUS 306 Cr.1

Concert Choir III

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 206; junior standing. Offered Fall, Spring.

MUS/THA 310 Cr.3

The Singer/Actor

This course examines the process of acting through song and verse. Its purpose is to explore a variety of theoretical and practical approaches integrating acting, vocal and stylistic techniques which support and strengthen each other. Prerequisite: THA 220 or THA 222; MUS 266 and MUS 268 (or MUS 235, MUS 236, MUS 237, and MUS 238). (Cross-listed with MUS/THA; may only earn credit in one department.) Offered Fall - Odd Numbered Years.

+MUS 317 Cr.3

Musical Classroom

Contextual music methodology course designed for elementary classroom teachers. This course is intended to explore the role of the classroom teacher. The emphasis of the course is to incorporate music into the daily class activities through performance and teaching opportunities. The course content will include listening to representative selections of Western classical, American, and Asian music in relation to its historical, social, and cultural contexts. Not applicable to the music major or minor. Most appropriate for teacher education. Offered Fall, Spring.

MUS 320 Cr.2

Orchestration and Arranging

This course is a study of the characteristics and capabilities of choral and instrumental ensembles and the writing of practical transcription and arrangements for various small and large ensembles. Arranging instrumental accompaniment for vocal groups will also be addressed. Lect. 1, Lab 2. Prerequisite: music or music education major; junior standing. Offered Fall - Odd Numbered Years.

MUS 321 Cr.2

Choral Arranging

Scoring and arranging for mixed chorus, choirs, glee clubs and small vocal ensembles; scoring of instrumental accompaniment for vocal groups. Prerequisite: MUS 335 or MUS 366. Offered Fall - Even Numbered Years.

MUS 322 Cr.3

Choral Techniques

Basic principles of choral performance. Elements of expression, stylistic characteristic and preparation of choral groups. The voice at different age levels. Examination and evaluation of choral materials. Prerequisite: MUS 211. Offered Spring - Odd Numbered Years.

MUS 323 Cr.1

Treble Chorus III

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 223; junior standing. Offered Fall, Spring.

MUS/THA 324 Cr.3

Cabaret Performance Workshop

Students work together in a workshop format to rehearse and eventually perform a cabaret set consisting of ensemble numbers, duets and solos on a common theme. Each number will be carefully rehearsed and staged. This is a studio course requiring active and regular participation. Repeatable for credit - maximum six. Prerequisite: admission to the music theatre emphasis. (Cross-listed with MUS/THA; may only earn credit in one department.) Offered Fall - Even Numbered Years.

MUS 325 Cr.2

Choral Literature

This course is a historical survey of choral literature from the early Renaissance to the present. Students will begin to assemble a personal choral music database and be familiarized with many major choral composers from each historical period. The course will delve into the general characteristics within each epoch as well as specific composer tendencies to the point of being able to recognize the differences within the music both visually and aurally. Prerequisite: MUS 203; admission to teacher education. Offered Spring - Even Numbered Years.

MUS 326 Cr.2

Jazz Improvisation I

The study and application of the theoretical, technical and performance aspects of jazz improvisation. Three periods per week. Prerequisite: MUS 236 or MUS 266. Consent of instructor. Offered Fall - Odd Numbered Years.

MUS 327 Cr.2

Jazz Improvisation II

A continuation of the principles and techniques of "Jazz Improvisation I" (MUS 326), but at a higher performance level. Three periods per week. Prerequisite: MUS 326. Consent of instructor. Offered Fall - Odd Numbered Years.

MUS 328 Cr.1

Diction in Music

This course is the study of diction for music majors and minors dealing with the phonetic systems and texts in foreign language. Prerequisite: MUS 366, MUS 368; concurrent enrollment in MUA 221 or MUA 321. Offered Spring - Odd Numbered Years.

MUS 330 Cr.1

Jazz Orchestra III

Small ensemble open to students in all schools and colleges with consent of instructor. Requires concurrent enrollment in a large ensemble for music education majors: MUS 106/206/306/406 (Concert Choir), MUS 123/223/323/423 (Treble Chorus), MUS 158/258/358/458 (Choral Union), if choral and general music education major. MUS 100/200/300/400 (Marching Band), MUS 144/244/344/444 (Symphonic Band), MUS 156/256/356/456 (Orchestra), MUS 140/240/340/440 (Wind Symphony), if instrumental and general music education major. A maximum of two credits in all small ensembles may be applied to the music major. Repeatable for credit - maximum two. Prerequisite: MUS 230; junior standing. Offered Fall, Spring.

MUS 334 Cr.1

Jazz Ensemble III

Small ensemble open to students in all schools and colleges with consent of instructor. Requires concurrent enrollment in a large ensemble for music education majors: MUS 106/206/306/406 (Concert Choir), MUS 123/223/323/423 (Treble Chorus), MUS 158/258/358/458 (Choral Union), if choral and general music education major. MUS 100/200/300/400 (Marching Band), MUS 144/244/344/444 (Symphonic Band), MUS 156/256/356/456 (Orchestra), MUS 140/240/340/440 (Wind Symphony), if instrumental and general music education major. A maximum of two credits in all small ensembles may be applied to the music major. Repeatable for credit - maximum two. Prerequisite: MUS 234; junior standing. Offered Fall, Spring.

MUS 340 Cr.1

Wind Ensemble III

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 240; junior standing. Offered Fall, Spring.

MUS 344 Cr.1

Symphonic Band III

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Not repeatable for credit. Prerequisite: MUS 244. Offered Spring.

MUS/THA 347 Cr.3

Sound Recording and Engineering

Students will explore the theory, methods, and technologies of live sound engineering and sound recording. Through hands-on projects, students will learn basic acoustics, sound technologies, live sound mixing, as well as the recording and digital editing of music. Lect. 2, Lab 2. Prerequisite: junior standing. (Cross-listed with MUS/THA; may only earn credit in one department.) Offered Spring - Even Numbered Years.

MUS 349 Cr.1

Vocal Accompanying

This course provides instruction and practical experience in vocal accompanying. Topics include score reading, rehearsal techniques, simplifying scores, and improving pianistic interpretation in performance. Prerequisite: MUS 249. Offered Spring - Odd Numbered Years.

MUS 351 Cr.2

Piano Pedagogy I

An introduction to teaching piano. Topics include methods and materials currently used for studying piano, business and administrative issues related to operating independent teaching studios, innovative strategies beyond traditional method book instruction and piano literature. Through a comprehensive survey of piano literature and essential pedagogical collections of repertoire, students will establish a foundation for teaching styles of intermediate and advanced piano literature. Lect. 2, Lab 1. Prerequisite: music major; concurrent registration in MUA 314. Offered Spring - Odd Numbered Years.

MUS 352 Cr.2

Piano Pedagogy II: Instructional Strategies

This course is designed to study and implement strategies for improving effectiveness in piano teaching. A systematic examination and evaluation of piano methods will be covered, as well as discussions regarding teaching content versus teaching process. Topics on teaching effectiveness will include behavioral modifications, task analysis, teaching cycles, and observation and evaluation techniques. Students also receive initial training in systematic methods for making independent changes in both piano practice and piano teaching environments. Lect. 2, Lab 1. Prerequisite: MUS 351; concurrent registration in MUA 314. Offered Spring - Even Numbered Years.

MUS 356 Cr.1

Orchestra III

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 256; junior standing. Offered Fall, Spring.

MUS 358 Cr.1

Choral Union III

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 258; junior standing. Offered Fall, Spring.

MUS 361 Cr.1

Advanced Small Ensemble

Small ensemble open to students in all schools and colleges with consent of instructor. A maximum of two credits may be applied to music major. Requires concurrent enrollment in a large ensemble for music education majors: MUS 106/206/306/406 (Concert Choir), MUS 123/223/323/423 (Treble Chorus), MUS 158/258/358/458 (Choral Union), if choral and general music education major. MUS 100/200/300/400 (Marching Band), MUS 144/244/344/444 (Symphonic Band), MUS 156/256/356/456 (Orchestra), MUS 140/240/340/440 (Wind Symphony), if instrumental and general music education major. Repeatable for credit - maximum two. Prerequisite: two credits of MUS 161. Consent of instructor. Offered Fall, Spring.

MUS 364 Cr.3

History of Western Music II

A chronological study of music in Western civilization with emphasis on periods and styles from the late 18th century until the turn of the 20th century. Outside listening required. Prerequisite: MUS 115 or minimum score of 3 on AP music exam or Music Department Theory assessment milestone. Offered Annually.

MUS 365 Cr.3

History of Western Music III

A chronological study of music in Western civilization with emphasis on the twentieth century through the music of today. Outside listening required. Prerequisite: MUS 115 or minimum score of 3 on AP music exam or Music Department Theory assessment milestone. Offered Annually.

MUS 366 Cr.3

Theory of Music II

This course is an expansion of MUS 266 set in the context of 18th and 20th century compositions. Topics include imitative counterpoint and 18th century counterpoint techniques, chromatic and extended harmonies, embellishing harmonies, enharmonic modulation and 19th century forms such as Sonata, Rondo, art song, etc. Prerequisite: MUS 266; concurrent enrollment in MUS 368. Offered Spring.

MUS 367 Cr.3

Theory of Music III

This course expands upon the musical concepts studied in MUS 366, set in the context of the 20th century to today. Topics include new approaches and techniques to composition that break from common practice tonality and the different types of analysis models for understanding these. Prerequisite: MUS 366; concurrent enrollment in MUS 369. Offered Fall.

MUS 368 Cr.1

Aural Skills II

This course is an extension of MUS 268 and continues to aurally train students in the aural skills of music by the singing of extended scale patterns, modes, inverted harmonies, modulating melodies and 2-4 part works from music literature. Skills in the aural identification of chromatic melodies, inverted harmonies, seventh, ninth and altered chords as well as borrowed rhythms are also developed. The class involves in class activities and outside of class lab activities using current Computer Aided Instruction (CAI) technology. Prerequisite: MUS 268; concurrent enrollment in MUS 366. Offered Spring.

MUS 369 Cr.1

Aural Skills III

This course is an extension of MUS 368 and continues to aurally train students in the aural skills of music by the singing of 9th, 11th, and 13th chord chords, non-tertian tri-chord and tetra-chord structures, synthetic scales, non-diatonic melodies from the 20th and 21st century. Skills in the aural identification of non-diatonic melodies, non-tertian structures and harmonic patterns with enharmonic function are also developed. The class involves in class activities and outside of class lab activities using current Computer Aided Instruction (CAI) technology. Prerequisite: MUS 368; concurrent enrollment in MUS 367. Offered Fall.

MUS 370 Cr.4

K-12 General Music Methods

This course is the study of the philosophy, structure, and content of music education in K-12 school curriculum. This course provides the students with a positive view of the realities of general music in relation to the youngsters themselves and to the musical and aesthetic learning possible at early childhood to adolescent aged levels. Sufficient materials, methods, and techniques are explored to enable the beginning teacher to provide for a quality music education. Furthermore, this course incorporates a lab component in general music classroom observations of K-5 learners in elementary schools. Prerequisite: MUS 203; admission to teacher education. Offered Spring - Even Numbered Years.

MUS 372 Cr.3

General Music in the Middle/Senior High School

This course is designed to prepare music education major students for teaching general music in secondary schools. Sufficient materials, methods, and techniques are explored as to enable the beginning teacher to deal with adolescent musical skills. Prerequisite: admission to teacher education. Offered Spring - Odd Numbered Years.

MUS 373 Cr.3

Choral Music in the Middle/Senior High School

This course is designed to provide the students with the basic principles and techniques of choral preparation and performance in relation to public school choral ensembles. It deals specifically with vocal production in young voices, choral sound, repertoire, stylistic characteristics, and expressive elements. Prerequisite: admission to teacher education. Offered Fall - Odd Numbered Years.

MUS 374 Cr.3

Instrumental Music in the Schools

A practicum in the structure, supervision, and administration of school instrumental music programs. Emphasis placed upon elementary band techniques, junior/senior high school band/orchestra rehearsal procedures, and organization and conducting. Prerequisite: completion of eight hours of techniques classes and conducting; admission to teacher education. Offered Fall - Odd Numbered Years.

MUS 377 Cr.3

Travel/Study in Music

Travel courses are conducted to various parts of the nation and world and may be led by one or more faculty members. Course work may include studio/professional practice, research, or seminar topics. Prior trip arrangements, financial deposit, and consent/orientation with International Education (if applicable) are required. May be repeated to different locations. Repeatable for credit - maximum six. Prerequisite: MUS 110 or MUS 205 or ART 102 or ART 251; concurrent enrollment in ART 360; sophomore standing. Consent of instructor. Offered Occasionally.

MUS 378 Cr.3

Advanced Instrumental Conducting & Field Experience I

This class includes an integrated field experience with instrumental conducting. In the field experience, candidates will learn about the complex processes of planning instrumental music instruction, engaging K-12 learners, and assessing student learning. Conducting topics include baton technique, score analysis and preparation, and interpretation. Students will study band and orchestral literature in relation to its performance and practice. This course will teach students how to connect on a higher level with young musicians through advanced score preparation and provide an array of effective rehearsal techniques and teaching strategies. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: MUS 203, MUS 211, MUS 370; admission to teacher education. Consent of department. Offered Fall - Even Numbered Years.

MUS 379 Cr.3

Advanced Choral Conducting & Field Experience I

This class includes an integrated field experience with choral conducting. In the field experience, candidates will learn about the complex processes of planning choral music instruction, engaging K-12 learners, and assessing student learning. This class includes the study of advanced problems in choral conducting, and a more advanced approach into effective rehearsal techniques in the choral classroom. Topics covered will include refining the conducting gesture, score preparation, score analysis, interpretation, rehearsal techniques, and proper procedures. This course will teach students how to connect on a higher level with young musicians through advanced score preparation and provide an array of effective rehearsal techniques and teaching strategies. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: MUS 203, MUS 211, MUS 370; admission to teacher education. Consent of department. Offered Fall - Even Numbered Years.

MUS 383 Cr.4

Choral Music in the Schools and Field Experience II

This combined methods and field experience course is designed to provide students with the basic principles and techniques of choral preparation and performance in relation to public school choral ensembles. This course specifically addresses vocal production in young voices, choral sound, repertoire, and vocal pedagogy. This course will also include the second field component required for all education majors. Students will practice these issues in the field concurrently with class peer discussion. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: MUS 379; admission to teacher education. Consent of department. Offered Spring - Odd Numbered Years.

MUS 384 Cr.4

Instrumental Music in the Schools and Field Experience II

This combined methods and field experience course is designed to provide teacher candidates with opportunities to understand and develop practices related to instrumental music and its role in a 6-12 classroom. Administrative approaches, rehearsal techniques, modern comprehensive teaching styles, classroom management, and conflict resolution for the secondary instrumental teacher will be addressed. Students will practice these issues in the field concurrently with class peer discussion. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: MUS 378; admission to teacher education. Consent of department. Offered Spring - Odd Numbered Years.

MUS 400 Cr.1

Screaming Eagles Marching Band IV

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 300. Offered Fall.

MUS 403 Cr.2

Symphonic Literature

A study of the development of the orchestra, the important orchestral forms and the evolution of orchestral styles through the study of compositions of representative composers. Prerequisite: MUS 301 or MUS 302 or MUS 364 or MUS 365. Offered Occasionally.

MUS 406 Cr.1

Concert Choir IV

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum four. Prerequisite: MUS 306; senior standing. Offered Fall, Spring.

MUS 407 Cr.2

Survey of Opera

A historical survey of opera from its origin to the present, emphasizing an understanding of the parameters of opera as an art form. Prerequisite: MUS 105 or MUS 110 or music major; MUS 301 or MUS 302 or MUS 364 or MUS 365. Offered Occasionally.

MUS 423 Cr.1

Treble Chorus IV

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum four. Prerequisite: MUS 323; senior standing. Offered Fall, Spring.

MUS 430 Cr.1

Jazz Orchestra IV

Small ensemble open to students in all schools and colleges with consent of instructor. Requires concurrent enrollment in a large ensemble for music education majors: MUS 106/206/306/406 (Concert Choir), MUS 123/223/323/423 (Treble Chorus), MUS 158/258/358/458 (Choral Union), if choral and general music education major. MUS 100/200/300/400 (Marching Band), MUS 144/244/344/444 (Symphonic Band), MUS 156/256/356/456 (Orchestra), MUS 140/240/340/440 (Wind Symphony), if instrumental and general music education major. A maximum of two credits in all small ensembles may be applied to the music major. Repeatable for credit - maximum two. Prerequisite: MUS 330; senior standing. Offered Fall, Spring.

MUS 432 Cr.2

Counterpoint

Composition of musical themes with analysis and writing of counterpoint in two and three parts. Prerequisite: MUS 335 or MUS 366. Offered Occasionally.

MUS 434 Cr.1

Jazz Ensemble IV

Small ensemble open to students in all schools and colleges with consent of instructor. Requires concurrent enrollment in a large ensemble for music education majors: MUS 106/206/306/406 (Concert Choir), MUS 123/223/323/423 (Treble Chorus), MUS 158/258/358/458 (Choral Union), if choral and general music education major. MUS 100/200/300/400 (Marching Band), MUS 144/244/344/444 (Symphonic Band), MUS 156/256/356/456 (Orchestra), MUS 140/240/340/440 (Wind Symphony), if instrumental and general music education major. A maximum of two credits in all small ensembles may be applied to the music major. Repeatable for credit - maximum two. Prerequisite: MUS 334; senior standing. Offered Fall, Spring.

MUS 437 Cr.2

Form and Analysis

The study of the basic structural principles and patterns of music, of their expansion into the chief homophonic and contrapuntal forms in Western music. Prerequisite: MUS 335 or MUS 366. Offered Occasionally.

MUS 439 Cr.2

Composition

The study of compositional techniques and their application to the writing of original music. Individual projects in composition. Prerequisite: MUS 336 or MUS 367. Offered Occasionally.

MUS 440 Cr.1

Wind Ensemble IV

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum four. Prerequisite: MUS 340; senior standing. Offered Fall, Spring.

MUS 444 Cr.1

Symphonic Band IV

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum two. Prerequisite: MUS 344. Offered Spring.

MUS 456 Cr.1

Orchestra IV

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum four. Prerequisite: MUS 356; senior standing. Offered Fall, Spring.

MUS 458 Cr.1

Choral Union IV

Large ensemble open to students in all schools and colleges with consent of instructor. A maximum of six credits in all large ensembles may be applied to music major. Repeatable for credit - maximum four. Prerequisite: MUS 358; senior standing. Offered Fall, Spring.

MUS 480 Cr.1-3

Independent Study of Music

Individual projects. Concentration in one area of advanced music study. Open to selected advanced students who have excellent records in the department. Admission by consent of adviser, instructor, and music department staff. Repeatable for credit - maximum six. Consent of department. Offered Occasionally.

MUS 499 Cr.1-3

Special Topics in Music and Music Education

Special topics in music and music education not covered by current courses taught in the Music Department. The particular topic selected to be determined by the Music Department according to the current need and interest. Repeatable for credit. Prerequisite: MUS 336 or consent of the department chair; junior standing. Consent of instructor. Offered Occasionally.

Music Applied (MUA) - Courses

Courses

MUA 201 Cr.1

Applied Flute

Intermediate applied course requiring audition. Includes one-half hour private lesson per week and one class lesson per week; performance for music department jury at end of semester. Repeatable for credit - maximum six. Prerequisite: open to music majors or minors. Others may enroll on a space available basis based on audition. Non-music majors and non-music minors pay an applied music fee. Offered Fall, Spring.

MUA 202 Cr.1

Applied Oboe

Intermediate applied course requiring audition. Includes one-half hour private lesson per week and one class lesson per week; performance for music department jury at end of semester. Repeatable for credit - maximum six. Prerequisite: open to music majors or minors. Others may enroll on a space available basis based on audition. Non-music majors and non-music minors pay an applied music fee. Offered Fall, Spring.

MUA 203 Cr.1

Applied Clarinet

Intermediate applied course requiring audition. Includes one-half hour private lesson per week and one class lesson per week; performance for music department jury at end of semester. Repeatable for credit - maximum six. Prerequisite: open to music majors or minors. Others may enroll on a space available basis based on audition. Non-music majors and non-music minors pay an applied music fee. Offered Fall, Spring.

MUA 204 Cr.1

Applied Bassoon

Intermediate applied course requiring audition. Includes one-half hour private lesson per week and one class lesson per week; performance for music department jury at end of semester. Repeatable for credit - maximum six. Prerequisite: open to music majors or minors. Others may enroll on a space available basis based on audition. Non-music majors and non-music minors pay an applied music fee. Offered Fall, Spring.

MUA 317 Cr.1

Applied Viola

Advanced applied course requiring audition. Includes one-half hour private lesson per week and one class lesson per week; performance for music department jury at end of semester. Repeatable for credit - maximum six. Prerequisite: open to music majors or minors. Others may enroll on a space available basis based on audition. Non-music majors and non-music minors pay an applied music fee. Offered Fall, Spring.

MUA 318 Cr.1

Applied Cello

Advanced applied course requiring audition. Includes one-half hour private lesson per week and one class lesson per week; performance for music department jury at end of semester. Repeatable for credit - maximum six. Prerequisite: open to music majors or minors. Others may enroll on a space available basis based on audition. Non-music majors and non-music minors pay an applied music fee. Offered Fall, Spring.

MUA 319 Cr.1

Applied Bass

Advanced applied course requiring audition. Includes one-half hour private lesson per week and one class lesson per week; performance for music department jury at end of semester. Repeatable for credit - maximum six. Prerequisite: open to music majors or minors. Others may enroll on a space available basis based on audition. Non-music majors and non-music minors pay an applied music fee. Offered Fall, Spring.

MUA 321 Cr.1

Applied Voice

Advanced applied course requiring audition. Includes one-half hour private lesson per week and one class lesson per week; performance for music department jury at end of semester. Repeatable for credit - maximum six. Prerequisite: open to music and music theatre majors or minors. Others may enroll on a space available basis based on audition. Non-music majors and non-music minors pay an applied music fee. Offered Fall, Spring.

MUA 471 Cr.1

Recital

Capstone project in applied music. Includes one-half hour private lesson per week and one class lesson per week plus public recital. Requirements vary by emphases. See the music department's "Student Handbook." Repeatable for credit - maximum two. Prerequisite: open to music majors; two semesters of 300 level applied music in the performance area of the recital. Concurrent enrollment in 300 level applied music course recommended. Offered Fall, Spring.

MUA 472 Cr.1

Performance Emphasis Recital

Capstone project in applied music. Includes one-half hour private lesson per week and one class lesson per week plus public recital. Requirements vary by emphases. See the music department's "Student Handbook." Repeatable for credit - maximum two. Prerequisite: open to music majors; two semesters of 300 level applied music in the performance area of the recital. Concurrent enrollment in 300 level applied music course recommended. Offered Fall, Spring.

MUA 473 Cr.2

Jazz Performance Emphasis Recital

Capstone project in applied music in jazz performance. Includes one hour private lesson per week plus public recital with a jazz combo. See the Department of Music's "Student Handbook" for more details about policies covering this course. Prerequisite: MUS 326; two semesters of MUS 161 (Jazz Combo); two semesters of 300-level applied music on major instrument; declared major in music: jazz performance emphasis. Offered Fall, Spring.

Neuroscience (NEU) - Courses

Courses

NEU 200 Cr.3

Introductory Neuroscience

This course will introduce the student to the interdisciplinary study of neuroscience through an investigation of the contributions made by biology, philosophy, and psychology. In so doing, the student will come to see the unique methodological and theoretical approaches each discipline brings to the discussion, and why it is that these different perspectives matter. The course will address the relevant introductory concepts associated with these discussions and engage a number of pertinent topics including learning, memory, attention, and perception, and the interrelationship between these processes. Prerequisite: grades of "C" or better in BIO 105 and PSY 100. Offered Annually.

NEU 490 Cr.1

Capstone Seminar in Neuroscience

A seminar-style course designed for students to review and discuss primary literature on current subjects of importance in neuroscience. Students are expected to participate and lead discussions of research literature, develop and write novel review articles, and actively participate in the assessment of the neuroscience interdisciplinary minor. This course should follow the completion of the other courses in the core curriculum of the neuroscience interdisciplinary minor. Prerequisite: NEU 200; PHL/PSY 333; BIO 415 or BIO 446; BIO 465. Offered Annually.

Nuclear Medicine Technology (NMT) - Courses

Courses

NMT 314 Cr.1

Cross-Sectional Anatomy

This course revisits anatomy specifically from an imaging perspective. Students will learn to identify normal and abnormal structures on CT and MRI scans and locate topographic landmarks on diagnostic and simulation images. Prerequisite: BIO 313 with a grade of "C" or better. Students with credit in RT 421 cannot earn credit in NMT 314. Offered Fall.

NMT 344 Cr.2

Medical Ethics and Health Administration

This course will focus on medical ethics, diversity, inclusive excellence, as they pertain to the profession of imaging sciences. We will also have a full review of the health information systems that support the technologist in their role in taking care of patients. Prerequisite: admitted into one of the NMT or RS programs. Offered Spring.

NMT 398 Cr.2

Research Writing in Nuclear Medicine Technology

This course focuses on students learning how to interpret published data and how to write an article ready for publication in professional journals in the field of nuclear medicine. Students in the Nuclear Medicine Technology Program will learn how to read, review, and comprehend NMT literature through a series of different writing exercises. Students will have opportunities to become comfortable deciphering the most up to date journal publications writing a journal article. Students will draft and revise their own work to become publication ready in "The Journal of Nuclear Medicine Technology. Prerequisite: concurrent enrollment in NMT 399; admission to NMT Program. Offered Spring.

NMT 399 Cr.1

Applied Research Writing in Nuclear Medicine Technology

This applied writing lab focuses on students practicing the art of interpreting data and summarizing NMT data. Learning how to summarize data and to write an article ready for publication in professional journals in the field of nuclear medicine will assist them in becoming successful in the field. The applied setting will offer students an opportunity to understand and perfect the different parts of writing an NMT research proposal. The applied writing lab provides opportunities for students to draft and revise their own work to become publication ready in "The Journal of Nuclear Medicine Technology. Prerequisite: concurrent enrollment in NMT 398; admission to NMT Program. Offered Spring.

NMT 401 Cr.2

Management and Methods of Patient Care I

The survey of hospital administrative procedures including medical terms and medical ethics. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 403 Cr.2-4

Anatomy, Physiology and Pathology

The anatomy, physiology and pathology of the human organ systems treated in the application of nuclear medicine. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 404 Cr.1-3

Management and Methods of Patient Care II

Skills in problem-solving, critical thinking and clinical decision making are developed, as well as oral and written clinical communication skills. Administrative duties including budgeting, medical and legal considerations, and political issues affecting patient care are discussed. Focus on basic measures necessary to provide quality patient care. Basic principles of record keeping and confidentiality of information are explained. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 405 Cr.1-5

Radiation Protection

Properties of alpha, beta, gamma, and x-ray radiations, their effects upon human beings and methods for protecting patients and staff from unnecessary exposure and possible injury. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 407 Cr.2-5

Clinical Instrumentation and Techniques

Structure, operating characteristics and practice in use of nuclear radiation detection instruments and radioisotope handling devices used in medical diagnosis and therapy. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 412 Cr.3-9

Clinical Nuclear Practicum I

The supervised use of radionuclides in imaging and scanning of patients for diagnostic purposes. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 413 Cr.3-9

Clinical Nuclear Practicum II

The supervised use of radionuclides in vitro and in vivo in patients for diagnostic purposes. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 416 Cr.1-3

Nuclear Medicine Quality Control Practicum

Elution of Mo/Tc generator, preparation and testing of radiopharmaceutical products. Gamma Camera uniformity, relative sensitivity and spatial linearity and resolution testing. The use of flood field and bar phantoms on in vivo imaging detectors in the nuclear medicine imaging laboratory. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 417 Cr.2-5

Nuclear Radiation Physics and Instrumentation

Properties of alpha, beta and gamma radiations; their origins and interactions with matter; their control and shielding; and the statistics of counting. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 418 Cr.1-3

Clinical Procedures Review I

Classroom technique to establish clinical practices used in nuclear medicine imaging; develop techniques used in planar and SPECT imaging. The fundamental skills of patient care, radiopharmaceutical preparation and administration. Emphasis is also on computer processing techniques used in coordination with imaging procedures. Duration: two semesters. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 419 Cr.1-3

Clinical Radiation Biology

Cellular and organ responses to radiation sources and radionuclides employed in nuclear medicine. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

NMT 422 Cr.1-4

Clinical Procedures Review II

Classroom technique to establish clinical practices used in nuclear medicine imaging. To develop techniques used in planar and SPECT CT imaging that has been developed in addition to the previous course "Clinical Procedures Review" (NMT 418). The fundamental skills of patient care, radiopharmaceutical preparation and administration will be reviewed. Emphasis is also in computer processing techniques used in coordination with imaging procedures. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 423 Cr.1-5

Radiopharmacy and Pharmacology

The study of radiopharmacology and radiochemistry of isotopes used in clinical nuclear medicine for research, diagnosis, and therapy. This course includes lecture and field work. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 427 Cr.1-5

Clinical Evaluation of Mathematical Data in Nuclear Medicine

This is a study of data collection, reduction and enhancement by computers used in Nuclear Medicine to generate interpretable images and data for physicians to diagnose and treat patients. This course includes lecture and field work. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 429 Cr.1-5

Multimodality Imaging

This course is designed to present a more in depth overview of all imaging modalities that can be done simultaneously with gamma cameras and PET cameras (i.e. PET/CT, SPECT/CT, PET/MRI, etc.). It will be an overview of the cross sectional anatomy, physics and instrumentation that is offered from these modalities. Specific topics will include; physics, instrumentation, scanning and image production. Comparison of cross sectional anatomy, specific to the modality and PET or SPECT imaging will be covered. Emphasis will be placed on patient considerations for each modality, image production and processing, patient and technologist safety, radiation protection and/or procedure protocol. This course includes lecture and field work. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Fall, Spring.

NMT 499 Cr.3

Independent Study

Independent projects under the direction and supervision of a member of the clinical staff. Hours arranged. Prerequisite: admission to the NMT Program; assignment to a clinical internship site. Offered Annually.

Nutrition (NUT) - Courses

Courses

NUT 200 Cr.3

Human Nutrition

Examination of the basic principles of the science of nutrition including understanding the basic sources of energy and the influences and effects of nutrition on one's overall health and fitness. Cultural and environmental factors that influence food availability and consumption will also be investigated. Offered Fall, Spring, Summer.

NUT 300 Cr.3

Lifecycle Nutrition

Exploration of nutrition assessment and nutritional requirements/challenges during pregnancy, lactation, infancy, childhood, adulthood and older adulthood, and community nutrition programs targeted for each life stage. Prerequisite: NUT 200. Offered Fall, Spring.

NUT 350 Cr.3

Functional Foods, Herbs, and Supplements

Consumer interest in the relationship between diet and health has increased the demand for information about functional foods, herbals, and supplements. The purpose of this course is to explore current literature and research in these ever-growing and popular topics. Definitions, purpose, safety, efficacy, and risks of each topic will be covered. Additionally, topics of discussion will include specific functional components of food, herbals, and supplements. Prerequisite: NUT 200. Offered Annually.

NUT 400 Cr.3

Food Science and Safety

This course examines the principles of food science including the functional role of carbohydrates, protein and fat. Emphasis will be placed on current topics of food science and safety in the national and local food industry including genetically modified and functional foods. Biological, chemical, and physical factors that affect the quality and safety of food products will be discussed in addition to the role of microorganisms in foodborne illness and food quality. Students in this course will also explore basic principles of food safety including food processing and food service as well as the role of government in food safety. Prerequisite: NUT 200; BIO 100 or BIO 105 or MIC 100 or MIC 230. Offered Fall, Spring.

NUT 450 Cr.2-3

Field Experience in Nutrition

Working with a UWL instructor and field site supervisor, students will identify a field site, develop a plan for exposure to appropriate experiences at the field site, participate in nutritionally-related professional activities at the field site, and submit a portfolio detailing field experiences. Prerequisite: nine credits completed in nutrition minor. Consent of instructor. Offered Fall, Winter, Spring, Summer.

NUT 479 Cr.1

Nutrition Teaching Assistantship

Working with a faculty mentor(s), students will aid in course development, delivery, and student assessment. Potential courses include approved courses in the nutrition minor. Prerequisite: grade of "B" or better in the class in which the student will be assisting AND permission from the instructor of the class in which the student will be assisting. Consent of instructor. Offered Fall, Winter, Spring, Summer.

NUT 499 Cr.1-2

Nutrition Research

Working with a faculty mentor(s), students will identify a research topic of interest, develop, plan, carry-out, and report the research in a campus and/or professional meeting. If the research findings are impactful in the field of nutrition, the student will submit a manuscript for publication in an appropriate journal. Repeatable for credit - maximum two. Prerequisite: six credits completed in nutrition minor. Consent of instructor. Offered Fall, Winter, Spring, Summer.

Philosophy (PHL) - Courses

Courses

+PHL 100 Cr.3

Introduction to Philosophy

Are you looking for answers to life's important questions? This course offers students an introduction to important conversations about philosophical topics such as the nature of reality, personal identity, freedom, knowledge, morality, religion, and social justice with the aim of students developing their own well-considered views. Offered Fall, Spring.

+PHL 101 Cr.3

Introduction to Logic

This course offers students an introduction to several methods of logic: the science of reasoning. In this course, students examine the nature of statements and arguments, identify rules for distinguishing good arguments from bad, learn methods for constructing and testing proofs, and practice good reasoning in general. Offered Fall, Spring.

+PHL 120 Cr.3

Introduction to Ethics and Society: The Person and the Community

Introduces the major perspectives on ethics and its relationship to individuals and social responsibility. Specific contemporary moral and social problems are introduced, such as abortion, famine, war, and individual rights versus the collective rights of society. Offered Fall, Spring.

+PHL 200 Cr.3

Introduction to the Literature of Philosophy

An examination of the expression, development and conflict of the ideas and values in current and time-honored works of philosophy from major world cultures. Topics to be studied include religion, ethics, knowledge, personal identity, justice and freedom. Students cannot earn credit for the philosophy major/minor in both PHL 100 and PHL 200. Offered Occasionally.

PHL 201 Cr.3

Ethical Theory and Practice

This course is an exploration of philosophical ethics with attention paid to the philosophical methods of analysis and argumentation used to drive and evaluate moral theories and judgments. Topics may include the nature of moral truth (e.g., absolute truth, relativism, pluralism), prominent moral theories (e.g., virtue ethics, deontology, utilitarianism), important figures from the history of philosophy (e.g., Aristotle, Kant, J.S. Mill), an examination into the nature of virtues and values, principles of right action, and character. Contemporary moral problems will help elucidate each of the theoretical positions. Offered Annually.

PHL 205 Cr.3

History of Ancient Philosophy

Almost all the questions and puzzles in the continental and analytic traditions of philosophy today can be sourced to developments in the philosophy of Ancient Greece. In this course, students read ancient texts from pre-Socratic thinkers such as Pythagoras, Heraclitus, and Parmenides. Students also read several dialogues of Plato, explore the metaphysics of Aristotle and the stoicism of Epictetus. Students discuss the differences between science and myth, philosophy and religion, opinion and knowledge, and explore questions about the nature of reality, its oneness and plurality, the nature of justice, and the purpose of life. Offered Fall.

PHL 206 Cr.3

History of Modern Philosophy

In this course, students explore the thinking of several important enlightenment philosophers whose work either led to, or gave interpretation to, the so-called "European Enlightenment." Students examine how these thinkers approached questions about mind and body, the foundations of knowledge, primary and secondary qualities, and the scientific image of human beings and nature. Offered Spring.

+PHL 212 Cr.3

Search for Economic Justice

Using humanistic and social scientific approaches, students will explore movements for economic empowerment as a critical dimension of justice in the increasingly global world. Through a mixture of face-to-face, online, and experiential methods, students will examine connections between the individual and larger systems and between the local and the global. They will critically analyze economic and political structures and movements as they pertain to gender, race, ethnicity, and class. The course will be informed by the perspectives of philosophy, English, economics, political science, anthropology, and women's, gender, and sexuality studies. Students may only earn credit in one of the following: ANT 212, ECO 212, ENG 212, PHL 212, POL 212. Offered Annually.

PHL 300 Cr.3

Topics in Philosophy

Study of a philosophical topic of special interest. Topics will vary according to the interests of the instructor. For the current content, consult the instructor or the department chair. Repeatable for credit - maximum six. Prerequisite: six credits in philosophy or permission of the department chair. Offered Occasionally.

PHL/PSY 301 Cr.3

Theory of Knowledge

This course is an intensive examination of the central philosophical questions surrounding the nature of knowledge, truth, and justification. Topics may include the difference between knowledge, wisdom, and know-how; analyses of knowledge, truth, and justification; the nature of misinformation; disagreement; the structure and sources of justification; the insights and limits of cognitive science; the role of human evolution in our understanding of the world; knowledge of abstract entities (e.g., principles of logic, mathematics, or morality); knowledge of the self and other minds; social cognition; and issues concerning the lived-experience of marginalized groups. (Cross-listed with PHL/PSY; may only earn credit in one department.) Offered Annually.

PHL 302 Cr.3

Symbolic Logic

This is an intermediate level course in formal logic, with an emphasis on proofs in first-order logic. Prerequisite: PHL 101 or MTH 151 or higher. Offered Spring - Odd Numbered Years.

PHL 303 Cr.3

Ethics and Meta-Ethics: Theory, Justification, and Objectivity

This course is an examination of classic and contemporary issues in the field of meta-ethics. Topics include addressing questions concerning the meaning of moral claims and principles, moral objectivity, moral psychology and motivation, moral disagreement, the nature of moral knowledge and justification, and the nature of moral reasons. Offered Fall.

PHL 310 Cr.3

Metaphysics

Metaphysics is the science of what it is to "be" something. Topics include: (1) how metaphysics differs from natural science, (2) in what sense is anything general, universal, particular, continuing, an event, a process, a substance, a relation, abstract, subjective, or objective, (3) in what ways possible worlds can differ from this one, (4) what kind of thing could have body and a mind, (5) what the difference between a thing and its parts in an arrangement is, (6) what is required for two seemingly different things to turn out to be the same thing, (7) how space and time differ from each other and other things, and (8) what natural laws and numbers are. Prerequisite: PHL 100 or PHL 101 or PHL 205 or PHL 206. Offered Occasionally.

PHL 311 Cr.3

Philosophy of Language

A survey of issues concerning the meaning of words. Their referential, syntactic and pragmatic features are explored. Description and causal theories of reference of names, description, indexicals, reflexives and kind terms and their relation to various theories of truth, necessity, and possibility are considered. The nature and roles of linguistic rules of use, competence and their relation to word, speaker and hearer meaning are explored in view of speech act theory. Prerequisite: PHL 100 or PHL 101 or PHL 120 or PHL 200. Offered Occasionally.

PHL 313 Cr.3

Philosophy and Science Fiction

The genre of science fiction allows one to reflect upon scenarios that are beyond the scope of actual human experience - whether by examining future contingent events, merely possible alternate universes, or employing technological innovations that have not yet been discovered. In this course, we will examine some of the difficult questions posed by philosophers through the scenarios depicted in works of science fiction. Topics include personal identity, time travel, artificial intelligence, and dystopia. Offered Spring.

PHL/RGS 319 Cr.3

Indigenous Thought

This course draws from sources authored by Indigenous scholars, organizers, and artists to examine historical and contemporary turns in Native American and Indigenous thought. We consider how theories and methodologies that emerge from Native American communities intervene on dominant (colonial) approaches to philosophy and theory. The course combines theoretical and applied readings with personal reflection to develop a critical consciousness of key topics in Native American and Indigenous studies such as land, agency, and decolonization. (Cross-listed with PHL/RGS; may only earn credit in one department.) Prerequisite: sophomore standing. (Cross listed with PHL/RGS; may only earn credit in one department.) Offered Occasionally.

PHL 323 Cr.3

Phenomenology and Existentialism

This course will approach the topics of conscious experience and human existence from the standpoint of two major schools of European philosophy: phenomenology and existentialism. Questions we will consider are: What is it that makes human existence unique? How is it that we come to experience a meaningful world? How does communication and empathy with others occur? Additional themes to be addressed include what it means to be a self or person, the human experience of anxiety, and our relationship to time and death. Prerequisite: three credits in philosophy. Offered Alternate Years.

PHL 330 Cr.3

Philosophy of Food: The Dining Experience

This course explores the aesthetic, ethical and existential features of food. Topics may include the ethics of hunting; whether food can be art; the Tao of food; the phenomenology of terroir, localism, and cosmopolitanism; whether manners are a moral or aesthetic good; and whether certain foods are Veblen goods. Offered Fall.

PHL 331 Cr.3

Philosophy of Religion

An examination of religion and religious experience. Topics considered are: theories of the proper description of God, arguments for and against the existence of God, theories of the nature of the soul, arguments for and against the existence of souls and reincarnation, the role and evidential power of religious experience and organized religion in justified belief. Prerequisite: PHL 100 or PHL 101 or PHL 120 or PHL 200. Offered Fall.

+PHL 332 Cr.3

Philosophy of the Arts

An examination of production, appreciation, and criticism of art. Topics may include the nature of art, the nature of beauty, the function(s) of art (if any), the moral status of works of art, aesthetic evaluation, the antimony of taste, the paradoxes of fiction, tragedy, and horror, and public financing of art. Theories may include the imitation/representation theory, expressionism, formalism, aesthetic experience theory, and institutional theory. Offered Annually.

PHL/PSY 333 Cr.3

Philosophy of Mind

A study of the nature of the mind from both philosophical and psychological perspectives. The course will focus on important attempts to solve the mind-body problem, how mind and body are related and also will address the related problems of consciousness, intentionality, free will and personal identity. (Cross-listed with PHL/PSY; may only earn credit in one department.) Offered Fall.

PHL 334 Cr.3

Philosophy of Science

An examination of such topics as the attempt to demarcate science from pseudo-science, the nature of scientific inference, the structure of scientific explanation, scientific reduction and the unity of science, the interplay between theory and observation in science, the realism/anti-realism debate, objectivity of science, and the relationship between science and religion. Offered Fall.

+PHL 335 Cr.3

Multicultural Philosophy in the United States

This survey course examines philosophical ideas and systems that are generated from a wide range of cultural traditions found in the United States. The aim of this course is to broaden and deepen understanding and appreciation of the diverse philosophical contributions made by a wide range of historically marginalized thinkers. This course focuses on philosophical contributions from Black American, Indigenous, Asian-American, and Latinx thinkers, women, members of the LGBTIQ/A community, and persons with disabilities. Offered Alternate Years.

+PHL 336 Cr.3

International Multicultural Philosophy

This survey course examines philosophical ideas and systems that are generated from a wide range of cultural traditions worldwide through the medium of film. The aim of this search is to broaden and deepen our understanding and appreciation of the multiplicity of philosophical perspectives which are part of an increasingly diverse, interconnected, and globalized world. Offered Alternate Years.

PHL 337 Cr.3

Social and Political Philosophy

An examination of differing philosophical views about humanity and human nature with respect to our social and political life. Topics may include the question of political legitimacy, the function of the state, the possible rights and obligations of citizens vis-a-vis the state, general concepts of justice, rights, liberty, equality, and community (as well as possible specific conceptions of these terms), and how social goods should be distributed. The application of these topics to contemporary social and political debates. Offered Alternate Years.

PHL 339 Cr.3

Medical Ethics

This course is an examination of the principal moral problems that arise in the clinical and non-clinical medical context. Topics include an introduction to the principles of autonomy, beneficence, non-maleficence, and justice, as well as the ethical complexities surrounding various issues including paternalism and patient autonomy, healthcare decisions regarding children, the role and responsibilities of surrogate decision-makers, truth-telling and confidentiality, clinical trials, abortion, reproductive and genetic technologies, euthanasia and physician-assisted suicide, public health, and justice in health care. Offered Occasionally.

PHL 341 Cr.3

Environmental Ethics

This course is an examination of the moral status of the natural environment. Theories including classical normative philosophy (e.g., virtue theory), ecocentrism, deep ecology, and eco-feminism are discussed. Topics surrounding animal rights, environmental justice, and the importance of biodiversity are considered. Throughout the course, students reflect upon what it means to have an appropriate relationship with the environment. Offered Alternate Years.

PHL 342 Cr.3

Philosophy of Love, Sex and Friendship

An examination into the nature of a variety of kinds of love including love of knowledge, love of friends, erotic love, and parental love. Philosophical consideration of topics such as the nature of desire, the politics of desire, sexual intercourse, adultery, monogamy, polygamy, homosexuality, and the obligations of friends as well as institutions of marriage and parenthood. Offered Alternate Years.

+PHL 349 Cr.3

Asian Philosophy

This course is an examination of the main questions found in the Asian philosophical traditions. Students read Indian, Chinese, and Japanese philosophers, with a special emphasis on Hinduism, Buddhism, Confucianism, and Daoism. Questions are centered in ethics, epistemology, and metaphysics. Topics include: (right) conduct and virtue; the nature of reality, mind, and self (e.g., what is a self, what is a person?); the Middle Way; individual and social well-being; and the notions of interdependent arising, emptiness, and enlightenment. Conceptual connections are made with Western philosophical traditions. Offered Alternate Years.

PHL 355 Cr.3

Philosophy and Film

An investigation into the philosophy of film and the philosophy within film. Topics may include personal identity, knowledge, technology, ideology, morality, emotions, and truth. Offered Annually.

PHL 360 Cr.3

Zen Buddhism

This course will explore the development of Zen Buddhism through an analysis of Indian, Chinese, Japanese, and Korean texts. Themes we will discuss include the enlightenment experience, the nature of reality and knowledge, the student/teacher relationship, koan practice (i.e. "the sound of one hand clapping"), and the relationship of Zen philosophy to ethics and aesthetics (poetry, painting, etc.). The course will make a point to situate Zen within the overall philosophical environment of China and Japan. Offered Alternate Years.

PHL 410 Cr.3

Neuroethics

Neuroethics is a study of the ethical, social and political impact of neuroscience, including the ways in which neurotechnology can be used to predict or alter human behavior and the implications of our understanding of brain function for society. As such students will be asked to integrate neuroscientific knowledge with ethical and social and political thought. Our understanding of the brain, as the organ of the mind, has implications for broader philosophical problems, such as the nature of free will, moral responsibility, self-deception, and personal identity. Prerequisite: PHL/PSY 333. Offered Annually.

PHL 420 Cr.3

On Humor and Happiness

What is happiness? Is it something that we should devote our lives pursuing? What is the relationship between happiness and other sorts of experiences we value? Can happiness ever be wrong or mistaken? What makes something funny or amusing? What is the relationship between humor and happiness? Is comedy just tragedy plus time? Is it okay to laugh at morally reprehensible jokes? This class will address those questions and include study of the philosophy of emotions, in particular the emotion of happiness and the experience of laughter as it relates to the various theories of comedy and humor. Prerequisite: sophomore standing or three credits in philosophy. Offered Alternate Years.

PHL 425 Cr.3

Wilderness Philosophy

The intention of this course is to investigate the many different ways in which wilderness is defined and understood within environmental philosophy. The approach will be broad and will cover a variety of themes. Our desire is both to clarify the positive characteristics of the wilderness idea while also recognizing its significant flaws and hazards. The moral implications of the wilderness concept will be given special attention. A variety of different philosophical perspectives will be utilized. Prerequisite: ENV 201 or three credits in philosophy. Offered Alternate Years.

PHL 494 Cr.3

Advanced Topics in Philosophy

Study of a philosophical topic of special interest. Topics will vary according to the interests of students and the instructor. For the current content, consult the instructor or the department chair. No more than six credits in PHL 494, 495, and 497 are applicable to a philosophy major or minor. Repeatable for credit - maximum 6. Prerequisite: junior or senior standing; nine credits in philosophy. Consent of department. Offered Occasionally.

PHL 495 Cr.1-3

Individual Study in Philosophy

Directed reading and research under the supervision of an instructor. No more than six credits in PHL 494, 495, and 497 combined are applicable to a philosophy major or minor. Repeatable for credit - maximum six. Prerequisite: 12 credits in philosophy, Consent of department. Offered Fall, Spring.

PHL 496 Cr.3

Integrative Seminar

Integration of programmatic themes and methods in the major. May be taken for honors credit. Prerequisite: 18 credits including PHL 100 or PHL 200; PHL 101; PHL 201 or PHL 303; PHL 205; PHL 206. Offered Spring.

PHL 497 Cr.1-3

Apprenticeship in Philosophy

This course allows students to combine their individual talent and achievement with academically relevant experiential learning. This course will provide majors and minors in philosophy the opportunity for a variety of significant work, service, and leadership tasks related to philosophy. This is a hands-on course which complements and enhances other academic work. No more than six credits in PHL 300, PHL 494, PHL 495, and PHL 497 are applicable to a philosophy major. Repeatable for credit - maximum six. Prerequisite: open to all students with 18 credit hours in philosophy who are in good standing. Consent of supervising instructor. Consent of department. Pass/Fail grading. Offered Fall, Spring.

Physics (PHY) - Courses

Courses

+PHY 103 Cr.4

Fundamental Physics I

A broad theoretical and experimental introduction to the study of physics using the techniques of algebra and trigonometry. Topics covered are kinematics with constant acceleration, vectors, Newton's laws of motion, circular motion, work, energy, momentum, rigid body motion, angular momentum, torque, oscillatory motion, gravitation, fluid mechanics, waves, resonance and sound. Additional topics may be selected from the area of thermodynamics. Wherever possible, applications to other fields of science such as chemistry, biology, and medicine will be discussed. Taking MTH 150 prior to this course is recommended. Lect. 3, Lab. 2. Offered Fall, Spring, Summer.

PHY 104 Cr.4

Fundamental Physics II

Continuation of PHY 103. Topics covered are electric forces and fields, electric potential, electrical circuit theory and applications, magnetic fields, electromagnetic induction, alternating current circuits, electromagnetic waves and the nature of light, lenses, mirrors, optical instruments, interference and diffraction of light, Einstein's theory of relativity, and the photoelectric effect. Additional topics may be selected from the area of quantum physics. Wherever possible, applications to other fields of science such as chemistry, biology and medicine will be discussed. Lect. 3, Lab 2. Prerequisite: PHY 103 or PHY 203; MTH 150 recommended. Offered Fall, Spring, Summer.

+PHY 106 Cr.4

Physical Science for Educators

A survey course focusing on applied physical science and the nature of scientific knowledge. Fundamental theories about the nature and interactions of matter and energy are developed using self-paced, small group, inquiry based teaching modules. The scientific knowledge developed is applied to issues of technology in society and everyday use situations. Emphasis is on modeling science teaching practices advocated by state and national science education standards using active learner practices. Lect. 3, Lab. 2. Prerequisite: elementary/middle level education major. Offered Fall, Spring.

+PHY 125 Cr.4

Physics for the Life Sciences

An introductory study of physics concepts using algebra and trigonometry, primarily for life science and allied health students. Topics can include a description of matter, motion, energy, fluids, waves, light, electricity, and topics in modern physics, with application to the life sciences. Note: This class is not recommended for most pre-professional tracks. Consult your advisor. Lect. 3, Lab 2. Prerequisite: MTH 150 strongly recommended. Offered Spring.

+PHY 142 Cr.3

Navigating Global Nuclear Issues

This course will serve as an introduction to the topic of nuclear weapons, energy and policy in society. This includes the social, economic, cultural and political aspects surrounding the development of nuclear weapons and their place in the world, especially in current events. International organizations will be discussed along with their role in regulation and recommending economic sanctions. We will look at the resurgence of nuclear energy and how it affects everything from the environment to global trade. Finally, the role of terrorism and the impact this has on shaping the human experience will be explored. Offered Occasionally.

+PHY 155 Cr.4

Solar System Astronomy

An introduction to astronomy as a science, emphasizing patterns in the night sky, our own solar system, and the possibility of life on other worlds. Throughout the course, comparison of observations with theoretical models will be stressed. Topics studied include the size and scale of the solar system relative to the universe; the scientific method; astronomical observations; motions of the earth, moon, sun, and planets; creating a model of the solar system; what we learn about planets from light and gravity; the structure and formation of the solar system; the planets and their moons; comets, asteroids, and meteoroids; and the possibility of life elsewhere in the universe. Recent results, including those from NASA missions, will be incorporated into the course. Lect. 3, Lab 2. Offered Fall.

+PHY 160 Cr.4

Stars, Galaxies and the Universe

An introduction to astronomy as a science, emphasizing celestial objects beyond our solar system. Throughout the course, comparison of observations with theoretical models will be stressed. Topics studied include the size and scale of the universe, using light and gravity to study the cosmos, the sun, the properties of other stars, lives and deaths of stars, star clusters, black holes, the Milky Way galaxy, dark matter, other galaxies, quasars, Big Bang cosmology, dark energy, and gravitational waves. Particular emphasis will be placed on recent discoveries. Lect. 3, Lab 2. Offered Spring.

+PHY 203 Cr.4

General Physics I

A broad theoretical and experimental introduction to the study of physics using the techniques of algebra, trigonometry and calculus. Topics covered are one- and two-dimensional kinematics, motion with varying acceleration, vectors, Newton's laws of motion, circular motion, work, energy, center of mass, momentum, rigid body motion, moment of inertia, angular momentum and torque. Additional topics may include oscillatory motion and gravitation. Wherever possible, applications to other fields of science and engineering will be discussed. Lect. 3, Lab. 2. Prerequisite: MTH 207 or concurrent enrollment. Offered Fall.

PHY 204 Cr.4

General Physics II

Continuation of PHY 203. Topics covered are fluid mechanics, sound, electrostatics, electric forces and fields, electric flux, electric potential, capacitance, elementary electrical circuit theory and applications, magnetic fields, magnetic flux and electromagnetic induction. Additional topics may include Maxwell's equations, alternating current circuits, electromagnetic waves and the nature of light. Wherever possible, applications to other fields of science and engineering will be discussed. Lect. 3, Lab 2. Prerequisite: PHY 103 or PHY 203; MTH 208 or concurrent enrollment. Offered Spring.

PHY 305 Cr.3

General Physics III

This is the third course of introduction to physics using calculus. Topics covered are mechanical and thermal descriptions of solids and fluids, fundamentals of thermodynamics, waves, sound, and optics. Prerequisite: PHY 104 or PHY 204; MTH 208 or concurrent enrollment. Offered Fall.

PHY 306 Cr.3

Modern Physics

The application of principles studied in fundamental or general physics to various areas of research and technology at the forefront of modern physical science. Topics include special relativity, origins of quantum mechanics, atomic spectroscopy, nuclear structure, and nuclear reactions. Select topics in heat, the laws of thermodynamics, kinetic theory, molecular spectroscopy, band theory of solids, semiconductors, and superconductors may also be included. Prerequisite: PHY 305; MTH 208. Offered Spring.

PHY 308 Cr.3

Optics

This course covers the mathematical treatment and modern applications of electromagnetic theory; propagation of light; geometrical optics, with emphasis on fiber optics and the formation of images in cameras, microscopes, and telescopes; physical optics, with emphasis on spectroscopy and the resolution limits of optical systems; and lasers. Topics in modern optics may also include holography. Prerequisite: PHY 305. Offered Occasionally.

PHY 311 Cr.2

Experimental Physics

Basic techniques of measurement used in all areas of physics and engineering. Selected experiments may include thin lens systems, spectrometers, microwave optics, interference and diffraction, aberrations, interferometers, thin films, polarization, speed of light, charge-to-mass ratio of an electron, electron spin resonance, quantization of energy states, and radioactive decay. Computational techniques include error analysis, graphing and curve fitting. Lect. 1, Lab 3. Prerequisite: PHY 250 and PHY 302 or PHY 305 and PHY 306. Offered Fall.

PHY 314 Cr.3

Introduction to Biophysics

We build on introductory physics topics that will be used to investigate biological problems. This course will be taught at the intermediate level, targeting students interested in learning more about the role of physics in biology. Topics covered in this class will include statistical physics and thermodynamics (introduced as needed). Other topics may include (but are not limited to): diffusion, entropy, filament mechanics, motor dynamics, hemodynamics, and cellular electrostatics. Additional topics may include medical physics applications. Prerequisite: PHY 306. PHY 308 strongly recommended. Offered Occasionally.

PHY 320 Cr.3

Statics

Principles of statics and free-body diagrams with applications to simple trusses, frames, and machines. Includes topics in force/movement vectors, resultants, distributed loads, internal forces in beams, properties of areas, moments of inertia and the laws of friction. Prerequisite: PHY 103 or PHY 203; MTH 208 or concurrent enrollment. Offered Fall.

PHY 321 Cr.3

Classical Mechanics

Rigorous mathematical development of classical dynamics using vector calculus. Dynamics of a single particle, oscillations, noninertial frames, central potentials, energy/momentum methods, systems of particles, collisions and plane motion of rigid bodies. Prerequisite: PHY 306; MTH 310. Offered Fall.

PHY 332 Cr.3

Electrodynamics

Fundamental concepts such as vector fields and vector operators, dipole and multipole fields, current distributions and the field quantities which describe surrounding conditions. Solution of Laplace's and Poisson's equations for given sets of boundary conditions. Recognition and use of mathematical abstractions of the fundamental nature of the electromagnetic field. The course culminates with Maxwell's Equations, the fundamental set of four equations in classical physics which govern the behavior of electric and magnetic fields and their interactions with matter. Prerequisite: PHY 306; MTH 310. Offered Spring.

PHY 334 Cr.3

Electrical Circuits

Physical principles underlying modeling of circuit elements and fundamentals of analog electrical circuits are explored through lecture and laboratory. Topics will include the following: current and voltage sources, resistors, I-V characteristics, Ohm's Law, Kirchhoff's Laws, capacitors, inductors; Thevenin and Norton theorems; circuits in sinusoidal steady state; diodes, transistors (bipolar junction and field-effect); op-amps; and elementary amplifier circuits. Lect. 2, Lab 2. Prerequisite: PHY 104 or PHY 204; MTH 208. Offered Spring.

PHY 335 Cr.4

Electronics

This course expands upon the topics covered in PHY 334. Analog circuits are treated in greater detail, including circuit analysis, follower circuits, and operational and transistor amplifiers. Additional analog topics include transistor limitations, comparators, and oscillators. Lectures and laboratories are expanded to include digital electronics, electronic devices and applications. Digital topics include digital circuits, digital logic, flip flops, counter, memory, A/D and D/A conversion. Additional topics may include arithmetic units and microprocessors. Lect. 3, Lab 3. Prerequisite: PHY 334. Offered Fall.

PHY 343 Cr.3

Thermodynamics

This course emphasizes basic concepts of thermodynamics, beginning with fundamentals such as temperature, thermal expansion, heat flow, and calorimetry. State equations, tables, and diagrams are used to describe the properties of pure substances. The First and Second Laws of Thermodynamics are investigated, with applications to energy, enthalpy and entropy. Gas, vapor, and combined power cycles are studied, along with refrigeration cycles. Gas mixtures and gas-vapor mixtures, with applications to air conditioning and psychrometrics also are studied. Additional topics may include the thermodynamics of chemical reactions, and statistical thermodynamics. Prerequisite: PHY 306. Offered Spring.

PHY/BIO/CHM 356 Cr.2

Curriculum and Assessment in Math and Science

Students are introduced to state and national content standards and related theories on teaching and learning. They will apply this knowledge to develop a curricular framework. Topics will include: Learning outcomes, student misconceptions, balanced assessment, and lesson planning in the content areas. Prerequisite: declared math or science education major/minor; admission to teacher education. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Offered Fall.

PHY 362 Cr.3

Astrophysics

The application of principles studied in fundamental or general physics to various areas of astrophysical research. This course will emphasize topics like measuring star and exoplanet properties, stellar structure and evolution, the solar neutrino problem, white dwarfs, neutron stars, pulsars, the interstellar medium, and galaxies. Prerequisite: PHY 250, PHY 302; MTH 310 or concurrent enrollment. Offered Occasionally.

PHY 374 Cr.3

Computational Physics

This course is an introduction to computational physics. Students will learn the fundamentals of applying numerical and graphical methods to a variety of physics topics ranging from mechanics, optics, electrodynamics, thermodynamics, and quantum mechanics. Lect. 2, Lab 2. Prerequisite: PHY 104 or PHY 204; MTH 308 or MTH 309 or concurrent enrollment in either. Offered Occasionally.

PHY 376 Cr.3

Introduction to Nuclear Science

An introduction to the structure and properties of atomic nuclei. This course will explore the production of ionizing radiation, its interactions with matter, and the instrumentation used to detect it. While all types of ionizing radiation will be studied, particular emphasis will be placed on X- and gamma-rays. Special topics related to the use of radiation in health care also will be covered. Prerequisite: MTH 150; PHY 104 or PHY 204. Students may not earn credit in both PHY 376 and PHY 386. Offered Fall.

PHY 386 Cr.3

Radiation Physics

This course, building on knowledge of basic physics, explores the area of radiation physics. Characteristics of x and gamma rays are described as well as their interactions in air and matter. The principles involved in the production of radiation are investigated. Methods and instrumentation of measurement of radiation are also covered. Prerequisite: MTH 150; PHY 104 or PHY 204 or PHY 125. Students may not earn credit in both PHY 376 and PHY 386. Offered Fall.

PHY 401 Cr.3

Quantum Mechanics

A comprehensive treatment of the modern theory of quantum mechanics, including Schrodinger equation, operators, free particles, particles in potentials, harmonic oscillator, angular momentum, and the hydrogen atom. The course includes the use of Fourier analysis and eigenvalue equations. Prerequisite: PHY 321; MTH 308 or MTH 309; MTH 310. Offered Fall.

PHY 411 Cr.3

Advanced Experimental Physics

This course will cover advanced experimental methods and techniques often encountered in research laboratories. Selected experiments may include x-ray diffraction, elemental and vibrational spectroscopy, microscopy, optical and electrical property measurements, material fabrication techniques, vacuum systems, and experimental apparatus fabrication. Computational techniques may include automated control, error analysis, graphing and curve fitting using LABVIEW and Python. Lect. 1, Lab 4. Prerequisite: PHY 311; MTH 310. Concurrent registration in MTH 308 or MTH 309 recommended. Offered Occasionally.

PHY 421 Cr.3

Advanced Mechanics

Continuation of PHY 321 covering advanced topics in classical and statistical mechanics. Topics include the Lagrangian and Hamiltonian formulations of mechanics, phase space and Liouville's equation; coupled oscillations, normal modes, continuous systems, and wave motion. In statistical mechanics, topics include kinetic theory, ensemble representations, partition functions, and classical/quantum statistics. Prerequisite: MTH 308 or MTH 309; MTH 310, PHY 321. Offered Occasionally.

PHY 423 Cr.3

Biomechanics of Human Movement

This course will provide a description of biological tissue properties, skeletal and joint mechanics, muscle mechanics, neurological influences related to movement. Kinematics, kinetics, static and dynamic modeling of the human body will be studied and will require problem solving. The principles of the biomechanics theory associated with human movement are presented to introduce and develop an understanding of the mechanical complexity of biological systems and movement performance. Methods and instruments of measurement (electromyography, force/pressure transducers, motion analysis and isokinetic dynamometers) in biomechanic research. Prerequisite: PHY 103 or PHY 203; MTH 310; BIO 312. Offered Fall.

PHY 432 Cr.3

Advanced Electrodynamics

This is a detailed course covering advanced topics in electricity and magnetism. Emphasis will be placed upon general, non-static electrodynamics, building upon the static cases studied in detail in PHY 332. Topics will include detailed analysis of radiation, field transformations and kinematics in Einstein's Special Theory of Relativity, dispersion, wave guides, and Lienard-Wiechert potentials. The mathematical tools for studying these phenomena will include differential equations, vector and tensor analysis, Fourier analysis, and complex analysis. Prerequisite: PHY 332; MTH 353 or concurrent enrollment. Offered Occasionally.

PHY 450 Cr.3-15

Physics and Astronomy Internship

Full- or part-time work experience in a physics or astronomy related position with a public or private agency. Not more than five credits are applicable to a major or three credits to a minor in physics. A written application, departmental acceptance, and appointment of adviser must be completed before registration. Repeatable for credit - maximum 15. Prerequisite: minimum cum GPA of 2.25 (2.50 in physics); PHY 104 or PHY 204, plus six credits in physics courses above the 204 level; junior standing. Consent of department. Offered Occasionally.

PHY/BIO/CHM/MTH 451 Cr.2

Curriculum and Content in Science and Mathematics

This is a methods course for science education and mathematics education majors that focuses on how content knowledge and pedagogical content knowledge are used to inform instruction. The course will focus on exploration of state and national standards, academic language, and methods of assessment. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/MTH/PHY 454 or BIO/CHM/MTH/PHY 455; admission to teacher education. (Cross-listed with BIO/CHM/MTH/PHY; may only earn credit in one department.) Consent of instructor. Offered Spring.

PHY/BIO/CHM 452 Cr.2

The Learner and Learning in Science

This is a methods course for science education majors that focuses on learning theories, equitable practices, and culturally relevant pedagogy. The course will draw on recommendations from state and national standards. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/MTH/PHY 454 or BIO/CHM/MTH/PHY 455; admission to teacher education. (Cross-listed with BIO/CHM/MTH/PHY; may only earn credit in one department.) Consent of instructor. Offered Fall.

PHY 453 Cr.1-3

Topics in Physics and Astronomy

Various subjects of interest to specific groups will be offered on occasion. Specific subtopics will be assigned each time the course is offered. Such titles might include nuclear physics, low temperature physics and the interstellar medium. Repeatable for credit under different subtitles - maximum 12 credits. Prerequisite: PHY 104 or PHY 204; junior standing. Offered Fall, Spring, Summer.

PHY/BIO/CHM 454 Cr.2

Field Experience I in Science Education

This course is the first field experience in a school environment. Candidates will plan and teach lessons within the designated grade range of 4-12. Candidates will be introduced to classroom management and conflict resolution. A multi-day, consistent schedule in the middle or high school field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/PHY 451 or BIO/CHM/PHY 452; admission to teacher education. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Consent of instructor. Offered Fall, Spring.

PHY/BIO/CHM 455 Cr.2

Field Experience II in Science Education

This course is the second field experience in a school environment. Candidates will plan and teach lessons within the designated grade range of 4-12. Candidates will be introduced to classroom management and conflict resolution. A multi-day, consistent schedule in the middle or high school field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 203, EDS 206; concurrent enrollment in the department's section of BIO/CHM/PHY 451 or BIO/CHM/PHY 452; admission to teacher education. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Consent of instructor. Offered Fall, Spring.

PHY 460 Cr.3

Condensed Matter Physics

This course will include such topics as crystal structure, electrical conductivity, insulators, free electron Fermi gases, energy bands, semiconductors, superconductivity, dielectrics, and ferroelectric crystals. Magnetic phenomena such as diamagnetism, paramagnetism and ferromagnetism will also be studied. Prerequisite: PHY 306; MTH 310. Offered Occasionally.

PHY/MTH 461 Cr.3

Mathematical Physics

In depth study of topics from vector analysis, Fourier analysis and special functions with emphasis on modeling physical phenomena involving conservative fields, fluid flow, heat conduction, and wave motion. MTH 461 may be counted towards both a MTH and PHY major. Prerequisite: grade of "C" or better in MTH 353. (Cross-listed with MTH/PHY; may only earn credit in one department.) Offered Spring - Odd Numbered Years.

PHY 466 Cr.3

Cosmology and the Structure of The Universe

This course will emphasize topics relating to the history of our universe, from the Big Bang to galaxy evolution and the formation of the structures we see today. Students will study the cosmological distance ladder, black holes in galaxies, galaxy clusters, dark matter, the Big Bang model, the inflationary model, and the cosmological constant. The course will also include aspects of special and general relativity relevant to these subjects. Prerequisite: PHY 305, PHY 306; MTH 308 or MTH 309 or concurrent enrollment; MTH 310 or concurrent enrollment. Offered Occasionally.

PHY/BIO/CHM 469 Cr.4

Teaching and Learning Science in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in science. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: GEO 200; EDS 351. (Cross-listed with BIO/CHM/PHY; may only earn credit in one department.) Offered Fall, Spring.

PHY 470 Cr.3

Advanced Quantum Mechanics

Continuation of PHY 401. Topics include spin, addition of angular momenta, multi-particle wave functions, identical particles, Bose and Fermi distributions, band theory, time independent and time dependent perturbation theory, spontaneous emission, and scattering theory. Prerequisite: PHY 401. Offered Occasionally.

PHY 472 Cr.3

Particle Physics

An introduction to the exciting field of modern elementary particles. Topics will include the Standard Model of particles and interactions, Feynman diagrams, quantum electrodynamics, quantum chromodynamics, weak interaction theory, quarks, leptons, intermediate vector bosons, and experimental methods of particle detection. Current ideas concerning grand unified theories, supersymmetry, superstring theory and particle astrophysics also will be discussed. Prerequisite: PHY 306. Offered Occasionally.

PHY 474 Cr.3

Advanced Computational Physics

In-depth study of advanced computational techniques using the programming language Java. Programming topics will include File IO, graphics and animation, multi-threaded programs, applets and Web pages. Numerical techniques will include root-searches, numerical integration, eigenvalue equations, differential equations, and Monte Carlo Metropolis simulations on advanced physics topics drawn from mechanics, thermodynamics, optics, quantum mechanics, and chaos theory. Lect. 2, Lab 2. Prerequisite: PHY 374; CS 120. Offered Occasionally.

PHY 476 Cr.3

Advanced Optics

This course involves both theoretical and experimental work in a variety of topics in modern optics, including electromagnetic theory, laser, Gaussian beams, optical resonators and the ABCD rule, Fourier optics, nonlinear optics, detectors and color. Prerequisite: PHY 308; PHY 332 or concurrent enrollment. Offered Occasionally.

PHY 483 Cr.3

Instrumentation in Biomechanics

Theory and use of instrumentation related to the study of the clinical biomechanics and research. Students will develop skills and experience necessary for data collection in a laboratory. Topics will include methods of data acquisition using force and pressure sensors, electromyography (EMG). Methods of signal processing (filtering and post-processing), analyzing, and interpreting data will be explained and performed through laboratory exercises. Laboratory time will be available to collect and process data relative to each laboratory instrument. Clinical EMG and electrical testing of nerves and posturography will also be explained. Lect. 2, Lab 2. Prerequisite: PHY 423. Offered Summer.

PHY 491 Cr.1

Capstone in Physics

A senior level course specifically designed for physics majors to review and discuss basic concepts relevant to the physical sciences, and to assess their major in physics. Students will present seminars to physics faculty based on current physics research articles, and also communicate physics concepts to a general audience in a written format. Students are expected to participate in discussions on current developments in the physical sciences, and be actively engaged in the assessment of their major program. Prerequisite: senior standing; physics major. Consent of instructor. Offered Spring.

PHY 497 Cr.1

Physics and Astronomy Seminar

This seminar series is intended for majors and minors in the department of physics as well as other students interested in physics, engineering and astronomy. It will consist of a series of talks given by visiting scientists and engineers as well as senior research students. The course provides an excellent opportunity to find out about the latest developments in physics, astronomy, and engineering and provides an excellent medium by which students can get to know each other and also their professors. All physics majors and minors are urged to sign up for this seminar each semester of their first year. Repeatable for credit - maximum four. A maximum of two credits can be used to satisfy elective requirements. Pass/Fail grading. Offered Fall, Spring.

PHY 498 Cr.1-3

Physics and Astronomy Research

Independent work by a student under the supervision of a faculty member. Students can work on a variety of research projects including, but not limited to, the areas of astronomy, condensed matter, computational physics, physics education, low temperature physics, lasers, optics and spectroscopy. Repeatable for credit - maximum nine, with permission of department chair. Consent of department. Offered Fall, Spring, Summer.

Political Science (POL) - Courses

Courses

+POL 101 Cr.3

American National Government

An introduction to the underlying principles and values, administrative and political decision-making processes, and institutions of American national government in an international context utilizing a comparative approach. The course includes discussion, analysis and development of critical thinking skills related to public policy-making problems and current issues. The course emphasizes the development of intellectual skills associated with an informed, involved and active citizenry. Offered Fall, Spring, Summer.

+POL 102 Cr.3

State and Local Government

An introduction to the underlying principles of federalism and focus on the new increasing decentralization of government program responsibilities to subnational governments in the United States. This is complemented by a comparison of the complex cultural, economic and intergovernmental settings of subnational governments. Students consider the implications of different environments for citizen participation, government characteristics, policy processes, and values associated with policy outcomes. The course emphasizes constructive citizenship in an environment where subnational governments will increasingly affect their lives. Offered Fall, Spring.

POL 201 Cr.3

Introduction to Political Science

A general introduction to areas of study in political science. Basic concepts and approaches to the study of politics will be applied to current events. Offered Occasionally.

+POL 202 Cr.3

Contemporary Global Issues

This course offers a contemporary multi-disciplinary perspective regarding the major issues and trends confronting the global society in the 21st century. Emphasis will be given to a critical review and assessment of the origin and present condition of the plethora of situations and problems affecting modern global society. The student will also learn to critically evaluate current and future events. The course will incorporate the views and approaches of the following disciplines: sociology/anthropology, economics, geography, political science, and history. Students may only earn credit in one of the following: ANT 202, GEO 202, HIS 202, POL 202, SOC 202. Offered Fall, Spring.

+POL 205 Cr.3

Women and Politics

An examination of the positions and roles of women in the political arena. This course discusses the nature and extent of women's political involvement, both in the United States and abroad, with particular emphasis on the cultural and racial diversity of women political participants in the United States. Additional topics will include the legal status of women, differences between male and female political behavior, factors that influence women's political participation and current political issues related to women. Offered Annually.

+POL 212 Cr.3

Search for Economic Justice

Using humanistic and social scientific approaches, students will explore movements for economic empowerment as a critical dimension of justice in the increasingly global world. Through a mixture of face-to-face, online, and experiential methods, students will examine connections between the individual and larger systems and between the local and the global. They will critically analyze economic and political structures and movements as they pertain to gender, race, ethnicity, and class. The course will be informed by the perspectives of English, economics, political science, anthropology, and women's, gender, and sexuality studies. Students may only earn credit in one of the following: ANT 212, ECO 212, ENG 212, PHL 212, POL 212. Offered Occasionally.

POL 215 Cr.3

Politics and Film

An investigation of the political messages and themes represented in popular films. The course aims to understand the use of film as a form of political communication, examine the politics of specific films, and consider what they reflect and communicate about the political world. Emphasis will be placed on developing the critical thinking and literacy skills necessary to interpret and analyze films for their political meanings and implications. Offered Occasionally.

POL 221 Cr.3

The American Legal System

An introductory survey of the American legal system in operation; utilizing case materials, class discussion, and hypothetical conflict situations to illustrate and study the range of problems, proceedings, actions, and remedies encountered. Offered Fall, Spring.

POL 222 Cr.3

Law, Governance and Politics

An examination of the numerous factors and influences acting upon and within the formal legal process, including: judicial interpretations and statutes and constitutions, litigation as a political strategy, legislation and litigation as an instrument of social change, law as a system of values, and law as a mechanism of political power and oppression. Prerequisite: POL 101 or POL 102. Offered Occasionally.

+POL 234 Cr.3

Comparative Politics

The course is devoted to the comparison and the critical analysis of selected topical global societies and regions. A general comparative framework will be utilized to develop a critical assessment of a representative sample of developed and developing contemporary societies. Emphasis will be given to a comparative study of institutions and their functions, various administrative and decision-making processes, and contemporary problems and issues. Finally, implications in the 21st century will also be discussed. Offered Fall.

+POL 244 Cr.3

International Relations

An introduction to the study of international relations and global politics. The course introduces both the concepts, like anarchy, states, and non-state actors, and the perspectives, like realism and liberalism, that are commonly used to assess areas like global conflict and security, the politics of globalization, and transnational political issues. Offered Fall, Spring.

POL 250 Cr.1-2

Leadership and Engagement

Introduces students to the benefits and obligations of being active participants in campus governance, and engaged citizens in their communities. Open to any university student who serves in the UW-L Student Association, Student Senate, Residence Hall Association Council, or is a resident of the service-learning community on campus. Repeatable for credit - maximum four. Pass/Fail grading. Offered Occasionally.

+POL 251 Cr.3

Political Theory

An introduction to consequential ideas in political philosophy, including justice, power, freedom, equality, and democracy. The course provides a foundation for understanding the philosophical assumptions and arguments across a range of significant political questions, and investigates the intellectual roots of historical and contemporary political ideas. The course emphasizes the development of intellectual skills needed to analyze political arguments, and highlights the practical implications of answering theoretical questions about politics. Offered Fall, Spring.

POL 261 Cr.3

Political Inquiry and Analysis

An introduction to the scope and methods of political science and public administration. This course is designed to acquaint students with the process of developing and exploring political questions and conducting research. Topics include forms of knowledge, objectivity and values, methodological individualism and holism, formulating research questions, and basic research design. Offered Fall, Spring.

POL 301 Cr.3

American Presidency

The American Presidency will emphasize the development of the office, selection and institutional relations with Congress coupled with an assessment of presidential power in the modern era in domestic and foreign policy making. Prerequisite: POL 101 or POL 102. Offered Occasionally.

POL 302 Cr.3

Legislative Process

Study of the organizations and behavior of legislatures and their membership at both the national and state levels. Legislative influence on the administration of the law and effect of pressure groups on the legislative process will also be studied. Prerequisite: POL 101 or POL 102. Offered Occasionally.

POL 303 Cr.3

Wisconsin Government and Politics

An in-depth study of the governmental institutions and political system in the State of Wisconsin. Included are an examination of Wisconsin political parties, interest groups, and electoral behavior as well as institutions such as the state legislature, judiciary, governmental structures and administration. Both state and local aspects are discussed. Prerequisite: POL 101 or POL 102. Offered Occasionally.

POL 304 Cr.3

Politics and the Media

A critical examination of the media in its capacity as the 4th Estate. The course will assess the special relationship that has evolved and its implication for American democracy. Special topics to be examined include: role of the media in the democratic process, limits on the media, the role of bias and opinion, the impact of distortion and propaganda, the media and the electoral process, the media's role in creating news events, and an examination of the media/political relationship in other political systems. Prerequisite: POL 101 or POL 102. Offered Occasionally.

POL 305 Cr.3

Political Parties

An analysis of political parties and their role in the American political system. Organization, principles and practices of parties are discussed. Prerequisite: POL 101 or POL 102. Offered Occasionally.

POL 306 Cr.3

Judicial Process

A detailed examination of the participants in American courts and the procedures encountered by litigants at different stages in the judicial hierarchy. Among the topics covered are the role of juries and grand juries, plea bargaining, and the manner in which judges attempt to decide cases. Prerequisite: POL 101 or POL 102 or POL 221. Offered Occasionally.

POL 307 Cr.3

Political Language and Communications

A critical examination of the language of politics and power in American society, including how political language shapes perceptions and understandings about government and politics; deception as a method of governance; symbolism, ideology, popular political culture and campaign rhetoric as sources of political power. Prerequisite: POL 101 or POL 102. Offered Occasionally.

POL 308 Cr.3

Interest Group Politics

This course will first examine why interest groups arise, how they maintain their existence, and what sorts of interest groups exist in the United States. It will go on to investigate the strategies used by interest groups to influence public policy and the extent to which they are successful in doing so. Prerequisite: POL 101 or POL 102. Offered Occasionally.

POL 309 Cr.3

Identity Politics

Examines the role various identities, such as class and race, play in shaping who gets what, when, and how from the political system. The course draws on theoretical and historical debates to evaluate the political, social, psychological, and economic implications of processes like socialization and mobilization to explain participation and voting behavior by different groups in society. Prerequisite: POL 101 or POL 102. Offered Occasionally.

POL 310 Cr.3

Public Opinion and Political Behavior

Political science as a "behavioral science." A study of human attitudes and behaviors in political situations and the techniques for observing, measuring and classifying them. Prerequisite: POL 101 or POL 102. Offered Occasionally.

POL 319 Cr.3

Campaigns and Elections

This course provides an overview of campaigns and elections in the United States. How can we explain the outcomes of American elections? Why do some people vote while other people do not? What strategies do candidates use to attract the support of voters, and are these strategies effective? How do national elections differ from state and local elections? What is the role of money in campaigns and elections? How do American campaigns and elections compare to campaigns and elections in other countries? These are just some of the questions our course will address. In our investigation of campaigns and elections, we will critically analyze the actions of voters, candidates, political parties, the media, and interest groups. We will study presidential elections, congressional elections, state-level elections, and local elections. Throughout the course, the questions "Are American elections 'broken'?" If so, can our election system be fixed?" will be asked. Prerequisite: POL 101 or POL 102. Offered Fall - Even Numbered Years.

POL 330 Cr.3

Politics of Developing Areas

An introduction to a wide range of issues and problems impacting political development in developing nations. The focus is on political systems of selected countries, the relationships between political processes and other aspects of development and on the factors which accelerate or impede development. Prerequisite: POL 202 or POL 234 or junior standing. Offered Occasionally.

POL 331 Cr.3

Politics of Democratization

An examination of the processes by which countries attempt to transition from authoritarian to democratic forms of government, along with the political, economic, social, and historical factors related to their potential for success or failure. The course focuses on both theoretical explanations and empirical outcomes across a diverse set of cases from around the world. Prerequisite: POL 202 or POL 234 or junior standing. Offered Fall.

POL 333 Cr.3

Asian Government and Politics

Comparison and analysis of contemporary governments and politics of the major Asian nations such as Japan, China, and India as well as the Philippines, Korea, Pakistan, Indonesia, and Vietnam. Prerequisite: POL 202 or POL 234 or junior standing. Offered Occasionally.

POL 334 Cr.3

Post-Communist Politics

An examination of the politics of the countries of the former Soviet Union and Eastern Europe. The course evaluates the historical break with communism and subsequent political, economic, and social transformations across the region. It also investigates theoretical and empirical reasons for these countries' divergent political and economic outcomes. Prerequisite: POL 202 or POL 234 or junior standing. Offered Occasionally.

POL 336 Cr.3

Middle Eastern Government and Politics

An examination of Middle Eastern political systems and practices. General topics covered will include: political institutions, electoral practices, political parties, policy formation, leadership selection and critical contemporary issues. Prerequisite: POL 202 or POL 234 or junior standing. Offered Occasionally.

POL 337 Cr.3

African Government and Politics

A study of political evolution and practice on the African continent. Emphasis will be given to a regional assessment of political behavior as well as the impact of current problems on selected countries. Special focus will be given to contemporary issues and developments. Prerequisite: POL 202 or POL 234 or junior standing. Offered Occasionally.

POL 338 Cr.3

European Government and Politics

An examination of the governments and politics of European countries and the European Union. The course surveys the domestic institutions and politics of a variety of European countries, with special emphasis placed on the United Kingdom, Germany, and France. It also examines the origins and evolution of the European Union, with particular attention given to contemporary political challenges facing the EU and its member countries. Prerequisite: POL 202 or POL 234 or junior standing. Offered Spring.

POL 340 Cr.3

American Foreign Policy

Examines the decision-making and institutional processes related to the formulation and execution of American foreign policy. The course evaluates the role of actors and institutions both inside and outside of the government to assess their impact on the ability of the United States to contend with contemporary and future foreign policy challenges. Prerequisite: POL 101 or POL 244 or junior standing. Offered Fall.

POL 341 Cr.3

America and the World

An examination of contemporary geopolitical and transnational challenges facing the United States. The course draws on both theoretical and historical debates regarding the nature of American foreign policy to evaluate its current and future potential in accomplishing its goals to address key bilateral and multilateral issues. Prerequisite: POL 101 or POL 244 or junior standing. Offered Spring - Even Numbered Years.

POL 344 Cr.3

Global Governance

Examines the various actors and institutions closely linked to the processes of global governance in a world that lacks a global government. The course evaluates the role of intergovernmental organizations, states, and non-state actors in the complex areas of governance that have emerged to address challenges like global conflict and security, the politics of globalization, and transnational political issues. Prerequisite: POL 244 or junior standing. Offered Spring - Odd Numbered Years.

POL 345 Cr.3

International Law

An examination of international law that explores both its evolution and function in contemporary global politics. The course draws on both theoretical and historical debates about the nature of international law to assess its current and future potential for addressing global challenges. Prerequisite: POL 244 or junior standing. Offered Fall.

POL 346 Cr.1-3

Model United Nations

Participate in a regional or national Model United Nations conference. The course examines the aims, structure, and processes of the United Nations and specialized UN agencies, programs and other groups. Emphasis each semester will be placed on countries and issues relevant to the conference agenda. Repeatable for credit - maximum nine. Offered Fall.

POL 347 Cr.3

Peace and Conflict

This course provides an overview of the scientific study of peace and conflict. How do various types of conflict such as inter-state war, civil war, terrorism, genocide, repression, and nonviolence differ from each other, and what do we know about trends in these types of conflict? Why do countries go to war with each other? Why do civil wars break out? What causes ethnic groups to rebel against their governments? What can be done to resolve these types of conflicts and prevent their recurrence? These are just some of the questions we will examine in this course. To do so, we will explore definitions, data, and trends in various types of conflict, as well as theories about the causes, termination, and resolution of various types of conflict. In the process, students will develop a better understanding of foundational and emerging research in the field of conflict studies that will enable them to make sense of various types of conflict worldwide. Prerequisite: POL 234 or POL 244 or junior standing. Offered Spring.

POL 350 Cr.3

American Political Theory

The history and development of American political thought, with attention to the thinkers and themes influential to institutions, ideologies, and controversies in American politics. The course will analyze the ideals and principles upon which the United States was founded, and critically assess their application and realization. Prerequisite: POL 251 or junior standing. Offered Spring.

POL 351 Cr.3

Classical Political Theory

The foundations of political theory from the ancient Greeks to the early modern social contract theorists. The course analyzes leading political theorists in their historical contexts, and evaluates their ideas according to the preceding tradition of political theory and their implications for political thought and practice. The survey includes studying the work of philosophers including: Plato, Aristotle, Augustine, Aquinas, Machiavelli, Hobbes, Locke, and Rousseau. Prerequisite: POL 251 or junior standing. Offered Fall - Every Third Year.

POL 353 Cr.3

Modern and Contemporary Political Theory

The development of political theory from the 17th century to the present. The course will analyze leading political theorists in their historical contexts, and evaluate ideas according to the preceding tradition of political theory and their implications for political thought and practice. The survey includes studying the work of philosophers including: Hobbes, Locke, Rousseau, Kant, Hegel, Marx, Burke, Mill, Nietzsche, and Foucault. Prerequisite: POL 251 or junior standing. Offered Fall - Every Third Year.

POL 355 Cr.3

Political Ideologies

A survey of the ideas and implications of political ideologies that have impacted consciousness and behavior in the 20th and 21st centuries. Topics include liberalism, conservatism, capitalism, communism, socialism, fascism, anarchism, multiculturalism, and feminism. Prerequisite: POL 251 or junior standing. Offered Fall - Every Third Year.

POL 361 Cr.3

Research Methods in Politics and Government

An analysis of politics, public policy and government administration utilizing contemporary research methods. Special emphasis is placed on the scientific method and the basic elements of research, research design, measurement, and data analysis utilizing statistical software. Prerequisite: STAT 145. Offered Spring.

POL 370 Cr.3

Constitutional Law I: Powers of Government

An examination of the United States Constitution, and the role of the judiciary in elaborating its fundamental principles: judicial review, the federal system, the range of national power, and presidential-congressional relations. Prerequisite: POL 101 or POL 102 or POL 221. Offered Occasionally.

POL 371 Cr.3

Constitutional Law II: The First Amendment

The First Amendment protects freedom of speech, press, religion and assembly. This course will carefully examine U.S. Supreme Court opinions in these areas. Among the topics to be covered are the constitutional relationship between speech and conduct, separation of religion and government, definition of obscenity and pornography, and the latitude available to those who use the media and newspapers to communicate ideas. Prerequisite: POL 101 or POL 102 or POL 221. Offered Occasionally.

POL 372 Cr.3

Constitutional Law III: Racial, Gender and Targeted Group Discrimination

A careful examination of U.S. Supreme Court rulings on racial and gender discrimination. Prerequisite: POL 101 or POL 102 or POL 221. Offered Occasionally.

POL 373 Cr.3

Constitutional Law IV: Rights of the Accused

In recent years the U.S. Supreme Court has issued a large number of opinions dealing with the rights of the accused. This subject is primarily addressed in the 4th, 5th and 6th amendments. This course will examine Court rulings in the areas of police searches and arrests, coercion in criminal proceedings, empaneling and deliberation of juries, right to counsel, and the protection against self-incrimination. Prerequisite: POL 101 or POL 102 or POL 221. Offered Occasionally.

POL 374 Cr.3

Constitutional Law V: Right to Life

A careful examination of the U.S. Supreme Court's opinions on capital punishment, abortion, and mercy killing, as well as other issues affecting the constitutional right to life. Prerequisite: POL 101 or POL 102 or POL 221. Offered Occasionally.

POL 375 Cr.3

Constitutional Law VI: Criminal Procedure

This course will carefully examine criminal procedure as interpreted in U.S. Supreme Court rulings pertaining to the 5th and 6th Amendments. Among the topics to be covered are protection against self-incrimination and double jeopardy, trial by jury, plea bargaining, right to counsel, and due process in the courtroom. Prerequisite: POL 101 or POL 102 or POL 221. Offered Occasionally.

POL 376 Cr.3

Constitutional Law VII: Administrative Law

An introduction to the field of administrative regulation in the United States and its relation to the constitutional foundations, the political structures and the policies of our various governmental units.

Prerequisite: POL 101 or POL 102 or POL 221 or PUB 210. Offered Occasionally.

POL 377 Cr.3

Constitutional Law VIII: 1787 and Original Intent

The central inquiry in Constitutional Law, and the question which most guides the U.S. Supreme Court, is whether the intentions of the Framers of 1787 should exclusively direct justices in interpreting constitutional provisions, or if it is necessary to adjudicate cases in light of changing legal and social circumstances not known to members of the Philadelphia Convention. We will begin with a study of the 1787 Convention and then read a series of law review articles advocating both of these perspectives. Supreme Court opinions will not be covered in this course. Prerequisite: POL 370 or POL 371 or POL 372 or POL 373 or POL 374 or POL 375 or POL 376. Offered Occasionally.

POL 399 Cr.3

Special Topics in Political Science

Special topics in political science not fully covered in the regular courses offered by the department. Repeatable for credit - maximum six. Offered Occasionally.

POL 400 Cr.2-3

Political Forum

Academicians and practicing politicians will be invited to address the students and lead discussion sessions on the important political questions of the time. Reading assignments, lectures and audio-visual presentations will be used to provide background information. Repeatable for credit - maximum six. Offered Occasionally.

POL/ECO/GEO/HIS/PSY/SOC 408 Cr.4

Teaching and Learning History and Social Studies in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in history and social sciences. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 351. (Cross-listed with ECO/GEO/HIS/POL/PSY/SOC; may only earn credit in one department.) Offered Fall, Spring.

POL 450 Cr.1-12

Internship in Political Science

An academically relevant work experience within the federal, state, or local government structure, or within other political organizations such as political parties, as arranged by the department. The experience will be supervised closely both by the local internship coordinator and the departmental staff. A written report relating the field experience to academic training will be required. Repeatable for credit - maximum 12. Consent of department. Offered Fall, Winter, Spring, Summer.

POL 451 Cr.3

Internship in Criminal Justice

An academically relevant field experience for minors in criminal justice. Prerequisite: SOC 324; junior standing; criminal justice minor. Offered Fall, Winter, Spring, Summer.

POL 494 Cr.3

Capstone Seminar in Politics and Government

Assessment of political science and public administration majors including a variety of written papers and oral presentations utilizing a seminar format. Prerequisite: POL 261 or POL 361; political science, political science education, or public administration major; senior standing. Offered Fall, Spring.

POL 498 Cr.3

Honors Research in Politics and Government

Honors research in political science and/or public administration, and under the supervision of a faculty advisor. Repeatable for credit - maximum six. Prerequisite: junior standing; political science and/or public administration honors candidate. Consent of instructor. Offered Fall, Spring.

POL 499 Cr.1-3

Independent Study in Political Science

Independent study comprised of readings and research in political science, and under the supervision of a faculty adviser. Repeatable for credit - maximum six. Consent of instructor. Offered Fall, Spring.

Psychology (PSY) - Courses

Courses

+PSY 100 Cr.3

General Psychology

A comprehensive introduction to contemporary basic principles and theories of behavior and related processes along with supporting scientific evidence and applications. Topics include sensory processes, perception, learning, memory, motivation, emotion, developmental change, measurement, social interaction and abnormal behavior. Offered Fall, Spring, Summer.

PSY 200 Cr.1

Orientation to the Psychology Major

This course is an orientation to psychology as a major. It is designed for sophomore level students who have either declared or are considering psychology as a major. It is also appropriate for second semester freshmen or first semester juniors. The field of psychology as a discipline will be discussed as will career options related to the field. Students will be required to complete a variety of tasks designed to identify and/or clarify career paths and goals and increase their understanding of psychology as both an empirical and applied field. Prerequisite: PSY 100. Offered Occasionally.

PSY 204 Cr.3

Abnormal Psychology

This course introduces students to various clinical presentations of psychopathology that may occur throughout human development. It provides an overview of specific psychological disorders as well as disorder-specific etiological considerations, associated clinical features, defining characteristics, and diagnostic criteria. The course also includes overviews of current treatments for the major disorders, and ethical considerations in mental health care. Prerequisite: PSY 100 or PSY 212; sophomore standing. Offered Fall, Spring, Summer.

PSY 205 Cr.3

Effective Behavior

This course is a general overview of ways that psychological science can be applied to individuals' lives to increase effective behavior. Course themes include exploring ways to improve enactment of roles through the lifespan such as student, parent, worker, and life partner. Topics may include: coping and stress; alcohol and drugs; relationships; and workplace skills and career issues. Prerequisite: PSY 100. Offered Annually.

PSY 212 Cr.3

Lifespan Development

An overview of human development from conception through death. It emphasizes major developmental milestones in several domains, including physical, cognitive and social/emotional. It also introduces students to prominent historical, theoretical, and methodological approaches to human development as well as to practical applications. Offered Fall, Spring, Summer.

PSY 230 Cr.3

Cognitive and Biological Foundations of Psychology

This course will introduce core issues, theories, and experimental findings in cognitive and biological psychology. Topics to be covered may include research methods, brain structures, neuronal communication, plasticity, sensory processes, attention, learning, memory, language, decision making, and problem solving. This course will serve as an introduction to the importance of cognitive and biological foundations of psychology. It will allow students to draw connections with other branches of psychology and to apply these foundations to research and real world situations. Prerequisite: PSY 100. Offered Annually.

PSY 241 Cr.3

Social Psychology

This course addresses the effects of the social context on human behavior. Topics may include attitudes; stereotyping and discrimination; aggression and prosocial behavior; and interpersonal relationships. It also examines the implications of social psychological principles in areas such as health, the environment and the legal system. Prerequisite: PSY 100 or SOC 110. Students may only earn credit in SOC 330 or PSY 241. Offered Fall, Spring, Summer.

+PSY 282 Cr.3

Cross-Cultural Psychology

An orientation to the definitions, concepts, theories, and methodologies of cross-cultural psychology. Included is an examination of cultural and ecological factors and their influences on perceptual and cognitive processes, personality, language, and other psychological variables. Prerequisite: PSY 100. Offered Fall, Spring.

+PSY 285 Cr.3

Culture and Mental Health

This course provides an examination of the relationship between culture and mental health. Specific attention is given to the impact of racism, prejudice, and minority status on the lives of various American minority groups and how the effects of these factors reveal themselves within a mental health framework. An eclectic, multidisciplinary approach that draws from clinical and social psychology, as well as sociology, is utilized. Prerequisite: PSY 100; sophomore standing. Offered Fall, Spring.

PSY 291 Cr.1-3

Contemporary Topics in Psychology: Beginner

Introductory exploration of special topics relevant to the field of psychology. Topics of specific interest to undergraduate students will be offered periodically. Offerings will be determined by staff/student interest and availability of teaching resources. Repeatable for credit. Departmental approval is necessary to apply more than six credits toward the psychology major. Prerequisite: PSY 100. Offered Occasionally.

PSY/PHL 301 Cr.3

Theory of Knowledge

This course is an intensive examination of the central philosophical questions surrounding the nature of knowledge, truth, and justification. Topics may include the difference between knowledge, wisdom, and know-how; analyses of knowledge, truth, and justification; the nature of misinformation; disagreement; the structure and sources of justification; the insights and limits of cognitive science; the role of human evolution in our understanding of the world; knowledge of abstract entities (e.g., principles of logic, mathematics, or morality); knowledge of the self and other minds; social cognition; and issues concerning the lived-experience of marginalized groups. (Cross-listed with PHL/PSY; may only earn credit in one department.) Offered Annually.

PSY 302 Cr.3

Environmental Issues: Applied Psychology

This course is an exploration of psychological perspectives on environmental issues. Two trends associated with the relationship between human attitudes and behavior and the natural and built environments will be examined. First, the course will focus on what psychology has to offer in terms of explaining how attitudes and behaviors have contributed to the degradation of the natural environment. Second, it will focus on the synergistic relation between person and planetary well-being characteristic of the "green psychology" movement. Prerequisite: PSY 100 or ENV 201. Offered Occasionally.

PSY 305 Cr.3

Human Sexuality

This course is an exploration of human sexuality from biological, psychological, and social perspectives throughout the lifespan. Sexual attitudes and behaviors reflecting a broad spectrum of typicality and experience will be discussed. Prerequisite: PSY 100; minimum of 45 credits earned. Offered Fall, Spring.

PSY 307 Cr.3

Intimate Relationships

This course explores the development and life cycle of cross-sex and same-sex intimate relationships (e.g., dating, romantic, and marital partnerships). The course will focus on topics such as: human need for relationships, interpersonal attraction, love, attachment, communication, relationship development and maintenance, sexually, jealousy, conflict and aggression. Conditions influencing relationships such as illness, aging, poverty, trauma, and intimate partner violence will be examined. The course will also highlight factors associated with relationship success and/or dissolution. Students will engage with the theory, research, and practical application of the course material. Prerequisite: PSY 100 or PSY 212; junior standing. Offered Annually.

PSY 308 Cr.1-2

Research Apprenticeship

This course offers research experience under the supervision of a faculty member. Students assist a faculty member in any phase of the research process including literature searches, formulation of instruments, pilot studies, data collection, data coding, data analysis, and presentation of research findings. Repeatable for credit - maximum six. Prerequisite: PSY 331; psychology major; junior standing. Consent of department. Offered Fall, Spring.

PSY 309 Cr.1

Volunteer Experience in Psychology

This course provides students with opportunities to gain practical experience through interaction with a variety of age groups in a setting related to the field of psychology. This supervised fieldwork requires 30 hours on site per semester. Repeatable for credit - maximum two. Prerequisite: PSY 100, PSY 212; psychology major; sophomore standing. Consent of instructor. Offered Fall, Spring, Summer.

PSY 315 Cr.3

Behavior Modification

This course will examine the theory and techniques of systematic behavior management and behavior control. Applied social learning theory, reinforcement, shaping, modeling, cognitive and rational techniques, extinction, aversive procedures, and token economies will be covered. Course will include the planning, execution, and evaluation of a personal behavior self-modification program, and several other opportunities to apply behavioral principles to everyday experiences. Prerequisite: PSY 100; PSY 204; PSY 212. Offered Annually.

PSY 316 Cr.1-3

Child Abuse and Neglect

This course provides an overview of child abuse and neglect from historical and contemporary perspectives. The course will cover causes, consequences, and contextual factors associated with child maltreatment. Interventions for children, families, caregivers, and community will be covered. Topics include physical and emotional abuse and neglect, sexual abuse, reporting and investigation, and prevention and treatment for victims and abusers. Prerequisite: PSY 212; junior standing. Offered Occasionally.

+PSY 318 Cr.3

Psychology of Women

Theories and research concerning the biological, psychological, and social aspects of female functioning will be evaluated. The course will analyze psychological literature that addresses itself to the experience, development, and behavior of women from different ethnic and cultural backgrounds. Prerequisite: PSY 100; sophomore standing. Offered Fall, Spring.

PSY 319 Cr.3

Men and Masculinities

This course examines everyday life using the theories, methods, and findings from the psychology of men and masculinities. The psychology of men is analyzed from multiple perspectives including biological, social learning, feminist, and social constructionist theories. The course considers the role of patriarchy, biology, the media, and other factors that shape the lives of individuals and social groups. Specific topics include men's mental and physical health, violence, work, and diversity. Prerequisite: PSY 100 or PSY 212; EFN 205 or ERS 100 or any WGS course. Offered Occasionally.

PSY 320 Cr.3

Human Motivation

This course examines contemporary and historical psychological conceptions, principles, and theories of human motivation. Concern is given to physiological, cognitive, emotional, and social factors that influence human's desires, aspirations, and behaviors. Practical applications to multiple areas including education, industry, health, and everyday situations will be considered. Prerequisite: PSY 212. Offered Occasionally.

PSY 321 Cr.3

Research Methods for Psychology Minors

Introduction to the research methods associated with psychological research for psychology minors. Consideration given to formulation of problems, techniques for gathering data, and the presentation and interpretation of research. Focus on an ability to critically evaluate social science research. Prerequisite: PSY 100; 45 earned credits. Not open to psychology majors. Offered Occasionally.

PSY 325 Cr.3

LGBTQ+ Youth Psychology

This course is an introduction to the psychological study of LGBTQIA+ youth - their strengths, challenges, and lived experiences. We will "break the silence" surrounding LGBTQIA+ experiences by exploring underrepresented topics in this field. Students will explore major topics in LGBTQ psychology research such as identity development, minority stress, and romantic relationships. In all topics, we will focus on underrepresented perspectives and intersections of identity between sexual orientation, gender, race, ethnicity, socioeconomic status, and others. We will answer the question "What strengths, obstacles, and contexts define the lives of LGBTQIA+ youth" by the end of the course. Prerequisite: junior standing. Offered Occasionally.

PSY 331 Cr.4

Research Methods: Lecture and Laboratory

This course provides an introduction to experimental and other research methods as used in psychology. The emphasis is on the scientific method, techniques of data collection, and the principles and theories employed in the study of behavior and mental processes. The laboratory portion develops skills in observation, formulating research ideas and hypotheses, designing and conducting research, data analysis, and scientific report writing. Lect. 2, Lab 4. Prerequisite: "C" or better in PSY 100 & STAT 145; complete ENG 110 or ENG 112, & CST 110; combined GPA of at least 2.25 in these four courses; completion of 30 cr.; three other credits in PSY. Open to psychology majors only. Offered Fall, Spring.

PSY/PHL 333 Cr.3

Philosophy of Mind

A study of the nature of the mind from both philosophical and psychological perspectives. The course will focus on important attempts to solve the mind-body problem, how mind and body are related and also will address the related problems of consciousness, intentionality, free will and personal identity. (Cross-listed with PHL/PSY; may only earn credit in one department.) Offered Fall.

PSY 334 Cr.3

Health Psychology

This course will examine the role of psychological factors in health, wellness, and illness. The focus will be on the interdependence of physiological, psychological, and sociocultural factors on the experience and treatment of acute and chronic illness. There will be a strong emphasis on the mind/body connection and evidence-based mind/body interventions (e.g., physical, psychological, spiritual, social, emotional, and intellectual). Ethical considerations, multicultural contexts, and public policy issues in treatment and research will be considered. Prerequisite: PSY 100 and six additional credits in PSY; or PSY 100 and BIO 312 or ESS 205. Offered Fall, Spring, Summer.

PSY 343 Cr.3

Group Dynamics

This course focuses on the structure and function of groups. Topics covered may include communication, process losses, leadership, problem-solving, improving the effectiveness of groups and intergroup relations. Prerequisite: PSY 100 or SOC 110. Not open for credit to students who have completed or are enrolled in CST 365. Offered Annually.

PSY 347 Cr.3

Empathic Listening Skills

This course is designed to clearly define empathic listening skills within a multicultural context. Students will learn to differentiate listening from psychotherapy and will practice listening skills. Topics include values identification, basic listening skills, in-depth exploration skills, and action planning without counseling. Ideal for those who will plan to work in a human services setting. Prerequisite: PSY 100; second semester sophomore standing. Offered Fall, Spring.

PSY/ART 350 Cr.3

The Practice of Art Therapy

As the theoretical orientation course in the art therapy minor, the class addresses current issues in the field of art therapy. Taking a multidisciplinary approach, students will explore art therapy theories, art therapy assessments, and the historical use of art therapy materials and media. Prerequisite: PSY 204 or PSY 212. (Cross-listed with ART/PSY; may only earn credit in one department.) Consent of department. Offered Occasionally.

PSY 356 Cr.3

Infancy and Childhood

This course focuses on basic principles, theories, and research in human development from conception through middle childhood (ages 5-12 approximately). Topics include physical, cognitive, language, social/emotional and personality development. Both the biological/genetic (nature) and the environmental (nurture) influences on development will be examined within each developmental area. Research methodology and theoretical perspectives will be integrated throughout each topic area. Prerequisite: PSY 212. Offered Annually.

PSY 357 Cr.3

Adolescence

Focuses on the developmental tasks of adolescence and the influence of family, peers, school and society. Topics include historical perspectives, cognitive and moral development, self-concept, sexuality, vocational choice, and problems of adolescence. Prerequisite: PSY 212. Offered Annually.

PSY 358 Cr.3

Adulthood

An overview of the 'journey of adulthood' including both continuity and change. It introduces students to major historical and theoretical perspectives on adult development as well as primary methodological techniques for studying adult development. It examines milestones and transitions in traditional developmental domains (physical, cognitive and social and emotional) and explores individual responses and adjustments to these experiences. Prerequisite: PSY 212 or gerontology emphasis. Offered Annually.

PSY 359 Cr.1

Aging and the Elderly

The study of aging and older persons from a psychological perspective. It highlights physical, cognitive, emotional and social characteristics of old people and developmental changes associated with aging processes. Special attention is focused on the differences between typical aging and disease-related conditions associated with aging. Attention also is focused on diversity in the experience of aging and on practical applications. Prerequisite: PSY 358 or concurrent enrollment. Offered Occasionally.

PSY 360 Cr.3

Cross Cultural Human Development

This course represents a blend of cross-cultural concepts and human development (across the lifespan) and will seek to explore the influence of culture on various aspects of human development. More specific topics include the role of culture on: socialization, physical growth, cognition, self and personality, sex and gender, social behavior, family relations, and health. Prerequisite: PSY 212. Offered Occasionally.

PSY 370 Cr.3

Educational Psychology

This course examines the application of psychological principles to school learning. Topics covered include theories of learning, individual differences, motivation, classroom management, measurement and evaluation, and effective teaching. The content will be discussed in relation to current issues and problems. Prerequisite: one of the following: PSY 212, ECE 212, ESS 207, or ESS 200. Offered Fall, Spring, Summer.

PSY 376 Cr.3

Industrial/Organizational Psychology

Psychological principles, concepts and methods applicable to organizational and industrial situations and practices. Topics include personnel selection, placement and evaluation; training; motivation; leadership; and social factors in organizations. Prerequisites: six credits in psychology; junior standing. Offered Annually.

PSY 377 Cr.3

Psychology and Law

This course examines a variety of ways that psychology intersects with the legal system. Topics include criminal profiling, false confessions and eyewitness misidentification, forensic assessment of competency and insanity, jury selection and decision-making, the impact of race in criminal sentencing, the philosophy and psychology of imprisonment, workplace harassment and discrimination, and roles for psychologists in the legal system. Prerequisite: PSY 100 or SOC 110 or SOC 120 or ANT 101. Offered Occasionally.

PSY 391 Cr.1-3

Contemporary Topics in Psychology: Intermediate

Intermediate consideration of contemporary topics related to psychological theories and research methods. Topics of specific interest to undergraduate students will be offered periodically. Offerings will be determined by staff/student interest and availability of teaching resources. Credit, prerequisite and format will vary according to the specific topics selected and the target student group. Repeatable for credit. Departmental approval is necessary to apply more than six credits toward the psychology major. Offered Occasionally.

PSY 403 Cr.3

Advanced Psychopathology

This course focuses on selected topics in the area of clinical and abnormal psychology and is designed to provide in-depth knowledge of advanced current issues in the field. It helps prepare students for the field of human services by offering additional information beyond that conveyed in the abnormal psychology course on the diagnosis and treatment of a number of psychological disorders. Prerequisite: PSY 204; junior standing. Offered Occasionally.

PSY 404 Cr.3

Counseling and Personality Theories

A comprehensive conceptual review of theories of psychotherapy and counseling with a focus on the processes of change. The theories examined include the psychodynamic, person-centered, gestalt, behavioral, cognitive-behavioral, solution-focused, marriage and family therapy, and group therapy. Divergence and convergence among the theories will be examined. This course will focus on the presentation of a transtheoretical analysis of these major theoretical views and methods used in psychotherapy. The course will emphasize the pragmatic and integrated qualities of major theories of psychotherapy and counseling. Prerequisite: PSY 100 or PSY 212; PSY 204; PSY major or minor, criminal justice minor, at risk child/youth care minor, or art therapy minor. Offered Fall, Spring.

PSY 405 Cr.1-2

Teaching Apprenticeship in Psychology

This course offers students the opportunity to assist a faculty member in teaching a course. Responsibilities may include grading and providing feedback on assignments, discussions, exams, and papers. Students may have the opportunity to lead discussions or give lectures. Students may hold office hours and offer tutoring. Students may learn about and give feedback to the instructor on instructional practices, strategies, and techniques. Students may assist in managing Canvas materials and grades. Repeatable for credit - maximum six. Prerequisite: minimum 3.25 cumulative GPA; psychology major; junior standing. Consent of instructor. Pass/Fail grading. Offered Fall, Spring.

PSY 406 Cr.3

Positive Psychology

Positive psychology explores the enhancement of human experience for individuals, families, and communities rather than a focus on mental illness. The course examines attitudes, traits, behaviors, and environments associated with well-being. Emphasis will be placed on both understanding the concepts as well as the possible avenues for application to students' lives. The course offers opportunities for self-assessment and the ability to demonstrate individual understanding of the research base supporting the field. Prerequisite: PSY 100; PSY 204; PSY 212; junior standing. Offered Occasionally.

PSY 407 Cr.3

Children's Cognition

This course will examine contemporary theories and current research on children's cognition, focusing on the years from birth to early adolescence. Topics considered will include biological bases of cognitive development. Piagetian and neo-Piagetian theory, sociocultural theories of cognition, information-processing approaches to children's memory and problem solving, the development of social cognition, and schooling and cognition. Prerequisite: PSY 212; PSY 331. Offered Fall, Spring.

PSY/ECO/GEO/HIS/POL/SOC 408 Cr.4

Teaching and Learning History and Social Studies in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in history and social sciences. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 351. (Cross-listed with ECO/GEO/HIS/POL/PSY/SOC; may only earn credit in one department.) Offered Fall, Spring.

PSY 410 Cr.3

Advanced Developmental Psychology

An in-depth study of important topics in developmental psychology. Relevant theories and recent research in social development, cognitive development, moral development, language development, and emotional development will be evaluated. Prerequisite: PSY 212; PSY 321 or PSY 331; STAT 145; junior standing. Offered Occasionally.

PSY/RGS 415 Cr.3

Multicultural Counseling

This course focuses on the effects of culture on the nature and behavior of individuals, their adaptations to institutions and environments, and their relations within and outside their culture. Specifically, the impact of concepts such as ethnocentrism, stereotypes, racism and prejudice are explored in terms of their relevance to the counseling process. Strategies and skills relevant to providing effective multicultural counseling are investigated. Prerequisite: PSY 100, PSY 285. (Cross-listed with PSY/RGS; may only earn credit in one department.) Offered Annually.

PSY 417 Cr.3

Child and Adolescent Psychopathology

An examination of psychological disorders which first appear during infancy, childhood and adolescence. This course covers the etiology, diagnosis, classification, treatment, and prevention of psychological disorders from different theoretical orientations. Special emphasis is placed on applying basic concepts and empirical data to various professional settings and to social policy issues. Prerequisite: PSY 204; PSY 212. Offered Fall, Spring.

PSY 420 Cr.3

Advanced Research Methods

An advanced course in the quantitative and logical aspects of statistical analysis, interpretation and design of behavioral science research and experimentation. Major emphasis is on the conceptual rather than the computational aspects of quantitative methods. Recommended for those planning graduate work in psychology or related fields. Prerequisite: PSY 100; PSY 212; grade of "B" or better in PSY 331; grade of "B" or better in STAT 145 or admission to Psychology Honors Program; junior standing. Offered Spring.

PSY/SOC 422 Cr.3

Death, Grief, and Bereavement

A study of the interaction of individuals and families coping with dying and death in various social settings including hospitals, care facilities, and hospices. Topics include psychosocial aspects of grief and mourning, sociological dimensions of bereavement, and various rituals of funeralization in the U.S. and other societies. Special attention is given to case studies and medical/ethical decision-making at the end of life, as well as other aspects of the social organization of death, dying, and bereavement. Prerequisite: PSY 100 or SOC 110 or SOC 120 or ANT 101 or gerontology emphasis; junior standing. (Cross-listed with PSY/SOC; may only earn credit in one department.) Offered Annually.

PSY 425 Cr.3

Understanding the Mental Health Counseling Profession

This course will introduce students to the field of mental health counseling. It will familiarize students with the assumptions, theories, strategies, applications, and ethical and legal considerations related to mental health counseling. Students will be introduced to the core requirements and multicultural competencies necessary to become a counselor, the various employment opportunities and settings in the counseling profession, and the roles and functions of counselors in these settings. Central to this course will be an on-going self-evaluation of the students' attitudes, values, interpersonal skills, and motives for choosing counseling as a potential profession. Prerequisite: psychology major or minor; junior standing. Offered Occasionally.

PSY 426 Cr.3

Addictive Behaviors

Study of the personality characteristics of individuals experiencing substance abuse, dependency, and compulsive behaviors such as eating disorders and gambling. The focus will be on abuse as a maladaptive response to the demands of life. Special topics will include consumptive patterns, level of dependence, neurological status, assessment, and contemporary treatment techniques. Prerequisite: PSY 100; PSY 204; PSY 212; junior standing. Offered Annually.

PSY 430 Cr.3

Cognitive Neuroscience

This course focuses on the utilization of a biological approach to understanding mental phenomena and behavior. Biological information includes the development and structure of the central nervous system, neuroanatomy and physiology, the function of basic neural events, neurotransmitters, neuropharmacology, hormones, evolution of behavior, brain development, neuroplasticity, and response to neural damage. Topics associated with how neural events influence human phenomena may include biological rhythms, consciousness, perception, sleep and dreaming, emotions, aggression, stress, learning, memory, and cognition. Prerequisite: PSY 100; PSY 321 or PSY 331 or BIO 312; junior standing. Offered Fall, Spring.

PSY 431 Cr.3

The Study of Consciousness

A comprehensive examination of conscious and nonconscious states of awareness. The course will explore contemporary cognitive theories on the nature of consciousness and its role and functioning in human behavior. The course also will cover states of consciousness (i.e., sleep and dreaming) as well as alterations in consciousness through hypnosis and psychedelic drugs. Prerequisite: PSY 100; BIO 312 or PSY 321 or PSY 331 or PHL 333. Offered Occasionally.

PSY 432 Cr.3

Learning and Memory

A study of the fundamental concepts and principles of human and animal learning and contemporary topics in human memory. Specific topics include classical and operant (instrumental) conditioning, concept and skill learning, memory storage, and retrieval, forgetting, and the use of information. Prerequisite: PSY 100; PSY 321 or PSY 331. Offered Fall, Spring, Summer.

PSY 434 Cr.3

Clinical Neuropsychology

This course examines the relationship between brain functioning and cognition, behavior, and emotion. The course covers neuroanatomy, neurophysiology, and neuropsychological assessment. The history, rationale, goals, and procedures of neuropsychological assessment will be explored alongside the role that neuropsychologists play in the evaluation and treatment of individuals with disorders (e.g. dementia, stroke, or traumatic brain injury). Prerequisite: PSY 100, PSY 321 or PSY 331 or BIO 312; junior standing. Offered Fall, Spring.

PSY 435 Cr.3

Cognitive Processes

This course examines theories, models, and related experimental research concerning human mental processes. Topics include acquisition of information, memory, decision-making, problem solving, and language. Prerequisite: PSY 100; PSY 321 or PSY 331; junior standing. Offered Fall, Spring.

PSY 436 Cr.3

Psychology of Language

An introductory course in psycholinguistics concerned with the comprehension, production and acquisition of language. Other topics include: language and thought, reading, writing, bilingualism, figurative language, metalinguistic skills, and the neuropsychology of language. Prerequisite: PSY 100; PSY 321 or PSY 331; junior standing. Offered Annually.

PSY 439 Cr.3

Sensation and Perception

Survey of the physiology and psychology of the human senses (e.g. vision, audition, smell, taste, and the skin senses) and the role they play in the attainment of knowledge and the regulation of behavior. In addition, the course will examine the various perceptual processes through which we interpret and restructure sensory information as we respond to changes in the environment. Prerequisite: PSY 100; PSY 321 or PSY 331 or BIO 312. Offered Fall, Spring.

PSY 440 Cr.3

Psychopharmacology

A study of the movement of psychoactive drugs into, around and out of the body, with an emphasis on the drug's site of action, therapeutic effects, side effects and possible clinical uses. Prerequisite: PSY 100; PSY 321 or PSY 331 or BIO 312; junior standing. Offered Annually.

PSY 441 Cr.3

Advanced Social Psychology

The course will provide coverage of methodology most frequently encountered in social psychology and cover topics both of classic and current interest such as stereotypes and prejudice, evolutionary psychology, interpersonal and group dynamics, leadership, and power. Prerequisite: grade of "B" or higher in PSY 241 or SOC 330; STAT 145. Offered Occasionally.

PSY/RGS 442 Cr.3

Racism and Oppression

This course focuses on psychological theory and research regarding individual, group, historical, institutional, and societal causes of racism and oppression. The manifestations and consequences of racism and oppression are examined as are the challenges inherent in reducing racism and oppression. Both historical and contemporary racism and oppression in a global context are analyzed. Prerequisite: one of the following: ERS 100, RGS 100, PSY 241, PSY 285, or SOC 330; junior standing. Students with credit in PSY/RGS 443 cannot earn credit in PSY/RGS 442. (Cross-listed with PSY/RGS; may only earn credit in one department.) Offered Occasionally.

PSY/RGS 443 Cr.3

Prejudice and Stigma

This course explores the psychological underpinnings of prejudice and stigma from an empirical, research-based perspective. In addition to covering well-recognized forms of prejudice such as racism, the course examines discrimination more broadly in terms of its impact on those who stigmatize and those who are stigmatized. Prerequisite: PSY 100; PSY 241 or SOC 330; PSY 321 or PSY 331. Students with credit in PSY/RGS 442 may not earn credit in PSY/RGS 443. (Cross-listed with PSY/RGS; may only earn credit in one department.) Offered Occasionally.

PSY 450 Cr.2-3

Internship in Psychology

This is a practical and guided learning experience in the field of psychology, where the student intern's duties and responsibilities are tailored to the needs of the approved site in connection to the student's abilities. Students participate in course activities that connect their experiential learning with their academics. This supervised experience is arranged through Career Services and supervised by the psychology instructional coordinator. No more than three credits may be applied to a major in psychology. Prerequisite: PSY 100, PSY 212; cumulative GPA of 2.30; psychology major; junior standing. Consent of instructor. Offered Fall, Spring, Summer.

PSY 451 Cr.3

Psychological Measurement

Principles and procedures for the psychological measurement of human differences. This course examines the development, quantitative interpretation, uses, distinctive and desired characteristics of tests of intelligence, aptitudes, achievement, occupational interests and personality. Prerequisite: PSY 100; PSY 321 or PSY 331; grade of "C" or better in STAT 145; junior standing. Offered Fall, Spring, Summer.

PSY 459 Cr.3

Genes and Behavior

This course provides an overview of how psychologists study genetic influences on human behavior and examines the roles that heredity and environment play in influencing individual differences in behavior. This course will critically evaluate behavioral genetics research on a variety of dimensions of human behavior, ranging from IQ and personality to clinical disorders, such as alcoholism, depression, and schizophrenia. Prerequisite: PSY 100; PSY 212; PSY 321 or PSY 331 or BIO 312. Offered Annually.

PSY 461 Cr.3

History and Systems of Psychology

A study of the philosophical and empirical foundations of modern psychology. Outstanding contributions by individual scholars and the development of major systems of thought within the field. Recommended for students considering graduate school in psychology. Prerequisite: PSY 100; PSY 321 or PSY 331; STAT 145; junior standing. Offered Occasionally.

PSY 481 Cr.1-3

Individual Projects in Psychology

Directed readings, research, or other individualized projects in psychology under the supervision of an instructor. Open to students who are in good standing. Registration requires consent of supervising instructor and department chair. Repeatable for credit - maximum six. Prerequisite: 12 credits in psychology; psychology major. Consent of instructor. Offered Fall, Spring.

PSY 482 Cr.1-3

Honors Projects in Psychology

This course allows psychology honors students to complete their independent research projects. Honors students must enroll for a total of three credits (over one or two semesters). Repeatable for credit - maximum three. Prerequisite: PSY 420, PSY 489. Consent of department. Offered Fall, Spring.

PSY 485 Cr.1

Appraising Psychology Seminar

This seminar is designed to actively involve students in the assessment of their psychology education. Students will complete a variety of measures as well as provide in-depth feedback about the psychology major. Students are expected to reflect on themes, debates, and issues in the field of psychology. Prerequisite: senior standing; psychology major/minor. Pass/Fail grading. Offered Spring - Odd Numbered Years.

PSY 489 Cr.3

Honors Seminar

Students develop introductions and methods for independent research projects. Designing sound proposals and grappling with research design issues are the main foci of the course. Projects are completed under the supervision of a faculty adviser (PSY 481). Prerequisite: acceptance into Psychology Honors Program; PSY 100, PSY 331; PSY 420 (may be taken concurrently); STAT 145; junior standing. Consent of department. Offered Spring.

PSY 491 Cr.1-3

Contemporary Topics in Psychology: Advanced

This course provides in-depth consideration of significant new areas of development in the field of psychology. Topics of interest to traditional and nontraditional students will be offered on an irregular basis. Credit, prerequisite, and format will vary according to the specific topic selected and the target student group. Repeatable for credit. Offered Occasionally.

PSY 495 Cr.3

Senior Seminar in Psychology

This seminar is designed to give graduating Psychology majors a small classroom experience for more intensive study of a specific area or problem in the field of psychology. Through discussion, interactive activities, and project development, students will work closely with each other and the instructor to go deeper into an interesting topic area. Topics will vary each semester based on the interests and expertise of the instructor, and the seminar will be capped at 15 students. Prerequisite: psychology major with 90+ credits. Offered Fall, Spring.

Public Administration (PUB) - Courses

Courses

PUB 210 Cr.3

Introduction to Public Administration

An introduction to the principles of bureaucracy, decision-making organization theory, individual and group behavior, personnel and budgetary policies, and the regulatory process within public agencies at all levels of government in the United States. It is highly recommended that either POL 101 or POL 102 be taken first. POL 102 is required for the public administration major/minor. Offered Fall, Spring.

PUB 320 Cr.3

Public Budgeting and Finance

An examination of the public budgetary process. Included are studies of the various approaches to taxation, decision-making and policy evaluation. Prerequisite: PUB 210. Offered Fall.

PUB 330 Cr.3

Public Policy

An intensive, in-depth analysis of selected public policies - their development, administration, effects and relationship to the broader political system from the perspectives of the policy maker and policy analyst. Prerequisite: POL 102 or junior standing. Offered Fall.

PUB 332 Cr.3

Urban Policy

An in-depth analysis of the forms, functions, and problems of urban governments with special attention to metropolitan areas. Field work and the materials of contemporary urban politics will be used. Prerequisite: POL 102 or junior standing. Offered Fall.

PUB 334 Cr.3

Health Policy

An intensive, in-depth analysis of health policies - their development, administration, effects and relationship to the broader political system. The perspectives of the policy maker and public policy analyst are emphasized. Prerequisite: POL 102 or junior standing. Offered Alternate Years.

PUB 338 Cr.3

Environmental Policy

An in-depth exploration of environmental politics and policy making beginning with American environmentalism in the 1960s and concluding with global environmental politics in the 21st century. Environmental issues, ethics, institutional problems, philosophical approaches, economic analyses and implementation problems will be studied. Prerequisite: POL 102 or junior standing. Offered Occasionally.

PUB 340 Cr.3

Public Personnel Administration

The study of principles and problems of public personnel management and behavior. Prerequisite: PUB 210. Offered Fall.

PUB 342 Cr.3

Urban Administration

An examination of the politics and policy problems facing urban administrators. Emphasis will be placed on policy formulation and implementation, particularly the systematic approaches to urban service delivery. Prerequisite: PUB 210. Offered Spring.

PUB 344 Cr.3

Health Administration

Examination of the policy, political and management problems facing health administrators and policy analysts. Emphasis will be placed on policy formulation and implementation. Prerequisite: PUB 210. Offered Alternate Years.

PUB 346 Cr.3

Ethical Decision Making in Government

This course familiarizes students with a set of concepts, frameworks, and approaches for reasoning, arguing, and writing about the normative issues that confront public administrators. We will connect concepts from political philosophy and applied ethics - including utility, liberty, justice, rights, and deliberative democracy - to assess real-world challenges facing government administrators. The course also addresses why ethical failures occur by explaining such concepts as administrative evil, lying, blind spots, moral hazard, and how deviancy is justified. Last, students will understand the various ways of combating unethical behavior, to include whistleblowing, inspectors general, and expressing loyal dissent. Prerequisite: PUB 210 or legal studies minor. Offered Annually.

PUB 399 Cr.3

Special Topics in Public Administration

An introduction and study of selected topics in public administration. Local officials, visiting lecturers, or persons specializing in a particular sub-area of public administration will be invited to present a course focusing on a particular topic. To be on an ad hoc basis. Repeatable for credit - maximum six. Offered Occasionally.

PUB 440 Cr.3

Recent Court Decisions Impacting Public Law and Administration

Through deep discussion and analysis of federal and state court decisions of the past year, this course helps explain how the third branch of government shapes the institutional foundations of government and its policy implementation. Such substantive analyses will illustrate the relationship between law, government, and society, while providing an opportunity to apply legal theories and criticisms of law and politics. Covered cases will range broadly, to include topics such as speech, religion, policing, prohibited discrimination, and government regulation and policy. Prerequisite: POL 221. Offered Annually.

PUB 450 Cr.1-12

Internship in Public Administration

An academically relevant work experience within the federal, state, or local government structure, or within other political organizations such as nonprofit organizations, as arranged by the department. The experience will be supervised closely both by the local internship coordinator and the departmental staff. A written report relating the field experience to academic training will be required. Repeatable for credit - maximum 12. Consent of department. Offered Fall, Winter, Spring, Summer.

PUB 451 Cr.3

Civic Engagement and the Wisconsin Idea

The study of the Wisconsin Idea of Community Service and late twentieth century communitarian and service learning philosophies are examined. The course includes service learning work in non-profit and local governmental agencies as well as the study of the meaning of democracy, citizenship, personal political efficacy, leadership and political culture. Lect. 1, Lab 4. Prerequisite: junior standing. Offered Occasionally.

PUB 453 Cr.3

Nonprofit Organizations

The management of nonprofit organizations has become an increasingly important field of study given the importance and role of nonprofit organizations within our society. This course will provide students with a general overview of management practices that are specific to nonprofit organizations. Specifically, this course will examine the scope, dimensions, and roles of nonprofit organizations, particularly those designated by the IRS as 501(c)(3), in order to understand their distinctive characteristics and functions in society. Prerequisite: POL 102 or junior standing. Offered Occasionally.

Public Health (PH) - Courses

Courses

+PH 200 Cr.3

Public Health for the Educated Citizen

This course introduces the context and scope of public health from historical, modern, and postmodern perspectives. Historical perspective will be used to explain the philosophical foundations, ethics, methods, and essential services that make up public health. Modern perspectives will be used to explain a century of controlling communicable diseases, lengthening lives, and the emergence of new challenges. A postmodern perspective will be used to explore persistent health disparities, social determinants of health, and public health in an era of globalization. Participants will be challenged to consider their role in public health as citizens and/or professionals in a free society. Offered Fall, Spring, Summer.

PH 204 Cr.3

Introduction to Global Health

This course introduces participants to global health through its history, definition, determinants, and development as a field of study. The interconnection between health problems in developed and developing countries and the interdisciplinary approach necessary to understand and address health problems and issues will be emphasized. Students will learn about the health status in regions of the world and various populations within those regions, and they will be able to suggest how health indicators are likely to change over time and explain why. They will also develop a basic understanding of the methods used to assess population health, and be able to discuss why some populations are healthier than others and what can be done to reduce health disparities. Offered Fall, Spring.

PH 335 Cr.3

Environmental Health

This course will examine the interdisciplinary and global impacts of human-environment relationships. Emphasis is placed on the critical nature of our understanding these relationships in order to improve ecosystem health, human health and well-being, global economics and sustainability. Politics, economics, science, technology, human behavior (both individual and collective), history, ethics, and the media are examined for the purpose of improving the quality of life for all people through the creation of a sustainable global society. The science, methods and processes of environmental health will be considered. The role of environmental health in public and population health will be examined. Prerequisite: admission to the public health and community health education major or an environmental studies minor. Offered Fall, Spring.

PH 340 Cr.3

Epidemiology and Human Disease Prevention

This course provides an introduction to epidemiology as a basic science for public health. It will address the principles of the quantitative approach to public health. The course will introduce measures of frequency and association, introduce the design and validity of epidemiologic research, and give an overview of appropriate data analysis for understand population health. An introduction to the skills needed by public health professionals to interpret critically the epidemiologic literature. The influence of epidemiology on legal and ethical issues will be presented. Prerequisite: admission to the public health and community health education, school health education major, or healthcare analytics management minor. Offered Fall, Spring.

PH 498 Cr.1-15

Community Health Education Preceptorship

Professional experience in a community health education setting for a full semester. The student works under faculty supervision with a professional in health education/health promotion who serves as a mentor. Repeatable for credit - maximum 15. Prerequisite: successful completion of all program course requirements; recommendation of the department; major GPA of 2.75. Consent of department. Offered Fall, Spring, Summer.

Race, Gender, and Sexuality Studies (RGS) - Courses

Courses

+RGS 100 Cr.3

Race, Gender, Sexuality, and Class

This course provides an introduction to how race, gender, sexuality, and class have been intertwined and coexisted over time to produce and reproduce social inequalities in the US, in the context of a globally connected world. It explores the key concepts, theories, and historical experiences that form the basis of scholarly work in comparative race, gender, sexuality, and class studies. The creation, transmittal, interpretation and institutionalization of racial, gender, sexual, and class identities are examined through a human rights framework. Offered Fall, Winter, Spring, Summer.

RGS/SOC 105 Cr.3

Introduction to LGBT Studies

This course will examine the cultural, legal, and political dimensions of LGBT life in the U.S. It will begin by exploring the social invention of heterosexuality and how personal and institutional interpretations of sexuality have historically informed the lives of LGBT people. The course also addresses class, racial and gender biases that especially confront queer communities of color in the U.S. Finally, the course looks at continued instances of hate crimes and homophobia against the backdrop of rights-based activism and the role that art and politics play in this interplay. (Cross-listed with RGS/SOC; may only earn credit in one department.) Offered Annually.

+RGS/SOC 150 Cr.3

Introduction to Social Justice

Students in this course will examine the concept of social justice through an intersectional and multidisciplinary lens. Students will begin with a critical investigation of the connections between the individual, the local, and the structural as they relate to justice and inequality in society. Social justice strategies are then evaluated, in case study fashion, through the lenses of gender, race, and class structures. (Cross-listed with RGS/SOC; may only earn credit in one department.) Offered Annually.

+RGS/ENG 207 Cr.3

Multicultural Literature of the United States

This course examines cultural themes in American literature in an effort to enhance student awareness of the multi-ethnic nature of American culture. Students engage in close reading, discussion, analysis, and interpretation of texts written by individuals from a variety of American ethnic and cultural backgrounds. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. (Cross-listed with ENG/RGS; may only earn credit in one department.) Offered Fall, Spring.

+RGS/ENG 210 Cr.3

Literature of Black America

Survey and exploration of Black American prose and poetry from their eighteenth century beginnings to the end of the Harlem Renaissance and the depression years. Prerequisite: ENG 110 or ENG 112 or concurrent enrollment in ENG 112. (Cross-listed with ENG/RGS; may only earn credit in one department.) Offered Fall, Spring.

RGS 300 Cr.1-3

Independent Study in Race, Gender, and Sexuality Studies

Directed reading and research under the supervision of an instructor. Repeatable for credit - maximum six. Prerequisite: sophomore standing. Consent of instructor. Offered Occasionally.

RGS/HIS 301 Cr.3

Women and Gender in the Modern United States: 1890-Present

This course introduces students to key developments in the history of women and gender in the modern period of U.S. history. It explores the diversity of women's experiences and gender constructs in relation to work, activism, citizenship, family life, and demographic changes, and cultural changes. (Cross-listed with HIS/RGS; may only earn credit in one department.) Offered Alternate Years.

RGS/HIS 305 Cr.3

History of Motherhood in the United States

This course considers motherhood in nineteenth and twentieth century United States history from a variety of perspectives. It explores women's experiences as mothers, across lines of class, race, and relationship status. It also examines the politics of motherhood in US history, and considers both the restrictive and the empowering dimensions of ideologies of motherhood. (Cross-listed with HIS/RGS; may only earn credit in one department.) Offered Alternate Years.

+RGS 307 Cr.3

Ethnic, Racial, and Gender Stereotypes in the Media

This course will trace how popular entertainment mediums such as film, television, books, comics, "wild west shows," music and cartoons have impacted perceptions of ethnic and racial groups from the early seventeenth century to the present. Besides analyzing the persuasive power of these types of mediums, it will examine why such representations were created and why they still persist. Often these racialized images are equally rooted in gender, class, and sexualized identities and this will be explored as well. The mythopoeic image that surrounds Indigenous Americans, African Americans, Asian Americans, Latinx, and other minority groups will be juxtaposed against the historical reality that these groups have faced and the contemporary inequalities that we still must confront. Prerequisite: ERS 100 or RGS 100 or WGS 100. Offered Fall, Spring.

RGS 308 Cr.3

Justice and Film

Film, along with other forms of media, helps to create, introduce, and reinforce cultural values, norms, and understandings. Using an interdisciplinary approach, this course will provide students tools with which to critically analyze film as a cultural product, with a specific focus on representations of race, gender, sexuality, class, and justice. Films to be viewed and analyzed will focus on issues such as interpersonal and gendered violence, parenting, immigration, economic justice, criminal justice policy, leadership, and the social construction of race, class, gender, and sexuality. While films will be the primary text in the course, each will be supplemented with the empirical and theoretical literature on the subject at hand. Offered Annually.

RGS 309 Cr.3

Music of Black America

This course examines the history of recorded Black musical expression in the United States through music, lyrics, and texts. It explores the role of spirituals, blues, ragtime, jazz, calypso & mento, gospel, rhythm & blues, funk, reggae, house, and rap music from slavery through the Obama era as a conveyor of social, cultural, and political commentary on race, gender, class, sexual orientation and other intersecting identities with an emphasis on race. Literary criticism, music history, critical race theory will be used to understand the importance of music as an expression of power and relative powerlessness to the black experience in the US. Lect. 2, Lab 1. Offered Fall.

RGS 310 Cr.3

Topics in Queer Studies

This course offers students the opportunity to explore contemporary and historic issue through the lens of Queer studies and builds on the current Introduction to LGBT studies course in order to expand students' understanding of Queer history, activism, and/or theory. The course takes an intersectional and interdisciplinary approach through which students can build understanding of the connections between Queer studies and other fields. Department approval is necessary to apply more than three credits toward the RGS major/minor. Repeatable for credit - maximum nine. Prerequisite: sophomore standing. Offered Annually.

RGS 314 Cr.3

Race, Gender, and Sport

Sport has long occupied a place at the heart of American culture and society. Organized athletics have also served as symbolic sites of protest, power, and inclusion for the nation's populations marginalized, oppressed, and discriminated against based on their racial, gender, and sexual identities. This course will explore the terrain of American sport in the twentieth century as a way to understand the profound impact that the phenomenon of athletic competition has had in the development of American race and gender relations. We will pay particular attention to how the racial, gender, and sexual identities of African American, Native American, Latino/a, and Asian American athletes shaped the purposes, participation, and meaning of sport. Moreover, we will delve into the events, icons, and cultural meanings of sports over the last century. Prerequisite: ERS 100 or RGS 100 or WGS 100. Offered Occasionally.

RGS/SOC 316 Cr.3

Gender, Sexuality, and Social Change in Religion

This course examines the various gender roles, norms, mobility, restrictions and empowerment that people experience within religious traditions, for example: Christianity, Judaism, Islam, Hinduism and Buddhism. Global case studies and engaging narratives focused on the intersections of gender, sexuality, race, and religion will be considered. Special attention will be paid to feminist laypersons and religious leaders who are reformulating traditional understandings and practices, and in turn, negotiating their agency within secular and spiritual spaces. Prerequisite: one of the following: ERS 100, RGS 100, RGS 150, WGS 100, WGS 130, WGS 150, SOC 110, SOC 120, EDS 206. (Cross-listed with RGS/SOC; may only earn credit in one department.) Offered Occasionally.

RGS/PHL 319 Cr.3

Indigenous Thought

This course draws from sources authored by Indigenous scholars, organizers, and artists to examine historical and contemporary turns in Native American and Indigenous thought. We consider how theories and methodologies that emerge from Native American communities intervene on dominant (colonial) approaches to philosophy and theory. The course combines theoretical and applied readings with personal reflection to develop a critical consciousness of key topics in Native American and Indigenous studies such as land, agency, and decolonization. (Cross-listed with PHL/RGS; may only earn credit in one department.) Prerequisite: sophomore standing. (Cross listed with PHL/RGS; may only earn credit in one department.) Offered Occasionally.

RGS 320 Cr.3

Violence and Gender

This course will examine the connections between gendered violence and power distributions within our society using an interdisciplinary and intersectional perspective. Three specific types of violence and abuse will be examined in-depth: sexual harassment, intimate partner violence, and sexual assault. Prerequisite: sophomore standing. Offered Alternate Years.

RGS 321 Cr.3

Sexual and Racial Violence in the United States

This course explores the history of how sexual violence in the United States has been used as a tool of racial oppression. Students in the course learn how organized responses to that violence, both by community and state actors, have been influenced by (and reflective of) racial politics. Prerequisite: one of the following: ERS 100, RGS 100, RGS 150, WGS 100, WGS 130, WGS 150, WGS 212, EDS 206, POL 205, PUB 210, SOC 110, SOC 120, SOC 150. Offered Spring - Odd Numbered Years.

RGS 322 Cr.3

Identity-Based Violence Prevention

From interpersonal violence such as gay-bashing, sexual harassment, and hate crimes to state violence such as police brutality and unequal application of the death penalty, identity-based violence can take many forms. In this self-directed and group-based course, students will be assigned one of these forms (topics will vary) and then work as a group to identify, review, and synthesize the empirical and theoretical literature on that topic as well as the empirical and theoretical literature on prevention strategies. The class will then use that knowledge to design and develop a prevention program of their own choosing aimed at that form of violence. Prerequisite: one of the following: ERS 100, RGS 100, RGS 150, WGS 100, WGS 130, WGS 150, EDS 206, PH 200, PSY 100, SOC 110, SOC 120, SOC 150. Offered Alternate Years.

RGS 325 Cr.3

Exploring White Privilege

This inter-disciplinary course is an exploration of white privilege in contemporary American society. Considering whiteness as both race and power-based system, this course attempts deeper understanding of the persistence of racism and its impact on all segments of society. Questions of denial and resistance, collaboration in systems of privilege, and personal and intellectual responses to those explorations highlight how privilege influences human interaction. The distribution of privilege within American society at personal, institutional, and cultural levels, as well as how whiteness operates within social constructs of class and gender, will be analyzed. Students ultimately develop strategies for confronting racism. Prerequisite: ERS 100 or RGS 100 or WGS 100. Offered Occasionally.

RGS 328 Cr.3

Sex/Work

In this course, students explore the topic of sex work. While course material will focus primarily on sex work in the United States, students also engage in comparative analyses in the international context. Participants in this course learn about the various types of labor that comprise sex work, as well as the different social, theoretical, feminist, regulatory, political, and legislative understandings and approaches to these forms of labor. Students also learn about the impacts that these understandings and approaches have on those engaged in these forms of labor and society more broadly, particularly as it relates to questions of gender, race, class, and sexuality. Prerequisite: one of the following: ERS 100, RGS 100, RGS 150, WGS 100, WGS 130, WGS 150, WGS 212, EDS 206, POL 205, PUB 210, SOC 110, SOC 120, SOC 150. Offered Fall - Odd Numbered Years.

RGS 330 Cr.3

Topics in Race, Gender, and Sexuality Studies

This course is an interdisciplinary analysis of a social issue, idea, or institution from the perspective of race, gender, and sexuality studies. Repeatable for credit - maximum nine. Prerequisite: sophomore standing. Offered Occasionally.

RGS 335 Cr.3

Indigenous and Postcolonial Feminisms

Indigenous women and Women of Color have been leaders in the development of feminist thought in the U.S. and globally. This course explores historical and contemporary Indigenous feminist scholarship and activism, with a focus on how decolonial and postcolonial thought expand feminist understandings of power. Through research and discussion, students consider the tensions and overlaps between feminist and Indigenous approaches and consider the transformative power of anti-colonial thought for feminist movements and literature. Prerequisite: ERS 100 or RGS 100 or WGS 100. Offered Alternate Years.

RGS 336 Cr.3

Anti-Colonial Theory and Movements

From Standing Rock to #FreePalestine, Indigenous people globally are organizing against colonialism. This course explores the history of anti-colonial thought that informs these movements. We engage postcolonial, decolonial, and Indigenous studies literatures to develop an understanding of contemporary movements against colonialism. Through discussion, research, and personal reflection, students develop a greater understanding of how Indigenous people resist and reject colonial regimes. Prerequisite: ERS 100 or RGS 100 or WGS 100. Offered Occasionally.

RGS/SOC 337 Cr.3

Globalization, Women, and Work

This course examines the global and often exploitative experiences of women, migrating from one part of the world to another for work. As women leave their countries of origin, many find themselves working as nannies, sex workers, house cleaners and modern-day slaves in sweatshops. These work environments often create vulnerability, discrimination, and abuse of women within the private and public institutions of their host countries. The course will also use in-depth personal narratives and a focus on grassroots social movements to witness how women resist workplace policies and domestic laws to campaign for their rights, despite cultural and political constraints. Prerequisite: one of the following: ERS 100, RGS 100, RGS 150, WGS 100, WGS 130, WGS 150, EDS 206. (Cross-listed with RGS/SOC; may only earn credit in one department.) Offered Alternate Years.

RGS 340 Cr.3

Objectively Biased: Knowledge Systems as Power Systems

This course explores the connection between race, gender, sexuality, class (RGSC), knowledge, and power. Students in this course learn to apply classic and critical race feminist epistemological theory to questions such as how knowledge is socially situated, what it means to explore knowledge through a critical race feminist lens, and how the production of knowledge is impacted by conceptions of RGSC. Students also learn about the scientific method and how critical race feminist epistemological theory can strengthen, not weaken, objectivity. Students work on a topic of their choosing to bring these theoretical frameworks to bear on a literature review that can be used as the basis for a research or advocacy proposal. Prerequisite: one of the following: ERS 100, RGS 100, RGS 150, WGS 100, WGS 130, WGS 150, SOC 150. Offered Alternate Years.

RGS 345 Cr.3

Gender, Race, and Leadership

This course examines how gender and race impact opportunities for and exercise of leadership within workplaces, communities, and movements, while developing students' leadership skills and understanding of the workplace structures they are likely to inhabit. Students examine the under-representation of women of all colors, LGBTQ+ people, and people of color from formal, public positions of power while also evaluating the strengths such leaders can and do bring to their work. Students critically evaluate leadership models, especially as they pertain to gender, sexuality, and race. Offered Alternate Years.

+RGS/ANT 362 Cr.3

Hmong Americans

This is an introductory course to Hmong American history, culture, and contemporary life. The course reviews Hmong history within the context of U.S. foreign policy in Southeast Asia from 1945 to 1975 and examines the sociocultural transformations that have been taking place in Hmong American communities across the U.S. since 1976. (Cross-listed with ANT/RGS; may only earn credit in one department.) Offered Occasionally.

RGS/SOC 363 Cr.3

Indigenous Peoples and the Environment

This course introduces students to Indigenous environmental issues. Topics include Western versus Indigenous perspectives on the environment, global distribution of environmental harms and hazards, Indigenous-led movements for environmental justice, toxic and nuclear waste disposal on Indigenous lands, mining and hydroelectric dams, public lands management systems, and sacred sites. Special attention is given to similarities and differences between Indigenous environmental issues globally versus in North America. (Cross-listed with RGS/SOC; may only earn credit in one department.) Offered Occasionally.

RGS 373 Cr.3

Gender and Human Rights

This course will provide an overview of transnational women's human rights movements in a variety of locations around the world; locations will vary with the instructor. Included in this overview will be the study of women's political participation as a human rights issue; women's bodily integrity as a human right; violence against women and reproductive sexual health and rights; human rights as a framework for social and economic and gender justice; and human rights as (quasi) legal accountability; UN agreements, treaties and venues of redress. Prerequisite: one of the following: ERS 100, RGS 100, RGS 150, WGS 100, WGS 130, WGS 150, EDS 206. Offered Fall - Odd Numbered Years.

RGS 374 Cr.3

Poverty as Public Policy

Is poverty something that capitalism produces or the fuel on which it runs? This course analyzes the historical underpinnings to the creation and evolution of welfare policy with special attention paid to the ways gender, race, and class oppression have shaped welfare in the past and today. Wage differentials, occupational segregation, unpaid work, and gendered and racial violence are discussed in relation to the construction of poverty. Current welfare policy will be analyzed and suggestions for reform based on current research will be developed by the class. Offered Alternate Years.

RGS 377 Cr.3

Critical Research and Advocacy Methods

This course focuses on helping students translate their race, gender, and sexuality studies (RGSS) education to address social problems connected to structural inequality, which impact workplaces, communities, and other institutions. The aim is to help students understand the utility of their skills in RGSS, to learn to apply their feminist, anti-racist, and social justice learning to real-world contexts, and to understand the connection between research and advocacy for social change. Students learn about processes behind social change: strategic analysis, organizing, action planning, research, evaluation, and advocacy. Prerequisite: ERS 100, RGS 100, or WGS 100; RGS 335 or RGS 336 or RGS 340 or concurrent enrollment. Offered Annually.

RGS/HIS 409 Cr.3

20th Century Civil Rights Movement

This course explores the modern civil rights movement in the US and the struggle for African Americans and other marginalized groups to gain equal rights in voting, education, employment, housing, and other facets of life in the US. It begins with the MOWM and examines the seemingly completing philosophies of civil rights organizations such as CORE, SNCC, SCLC, BPP, AIM, SDS, NCAI, YLP, RG, NOW, NBFO, the Mattachine Society, the Daughters of Bilitis, STAR and other civil rights organizations, leaders, and local people in shaping their own destinies. It highlights and interrogates major national and local political struggles rooted in racial, gender, and sexual identities and their reciprocal relationships with international political and anti-colonial movements from 1941 to the present. It concludes with exploring the link between convict leasing, prison reform movements, political prisoners, and the prison industrial complex as the New Jim Crow. Prerequisite: one of the following: ERS 100, RGS 100, WGS 100, EDS 206, HIS 210. (Cross-listed with HIS/RGS; may only earn credit in one department.) Offered Spring.

RGS/PSY 415 Cr.3

Multicultural Counseling

This course focuses on the effects of culture on the nature and behavior of individuals, their adaptations to institutions and environments, and their relations within and outside their culture. Specifically, the impact of concepts such as ethnocentrism, stereotypes, racism and prejudice are explored in terms of their relevance to the counseling process. Strategies and skills relevant to providing effective multicultural counseling are investigated. Prerequisite: PSY 100, PSY 285. (Cross-listed with PSY/RGS; may only earn credit in one department.) Offered Annually.

RGS/PSY 442 Cr.3

Racism and Oppression

This course focuses on psychological theory and research regarding individual, group, historical, institutional, and societal causes of racism and oppression. The manifestations and consequences of racism and oppression are examined as are the challenges inherent in reducing racism and oppression. Both historical and contemporary racism and oppression in a global context are analyzed. Prerequisite: one of the following: ERS 100, RGS 100, PSY 241, PSY 285, or SOC 330; junior standing. Students with credit in PSY/RGS 443 cannot earn credit in PSY/RGS 442. (Cross-listed with PSY/RGS; may only earn credit in one department.) Offered Occasionally.

RGS/PSY 443 Cr.3

Prejudice and Stigma

This course explores the psychological underpinnings of prejudice and stigma from an empirical, research-based perspective. In addition to covering well-recognized forms of prejudice such as racism, the course examines discrimination more broadly in terms of its impact on those who stigmatize and those who are stigmatized. Prerequisite: PSY 100; PSY 241 or SOC 330; PSY 321 or PSY 331. Students with credit in PSY/RGS 442 may not earn credit in PSY/RGS 443. (Cross-listed with PSY/RGS; may only earn credit in one department.) Offered Occasionally.

RGS 450 Cr.1-9

Internship in Race, Gender, and Sexuality Studies

The internship is an academically relevant field experience for majors and minors in race, gender, and sexuality studies, which combines RGSS scholarship with practical experience. The field experience is supervised by the RGSS staff. A maximum of three credits will be counted toward the minor. Repeatable for credit - maximum nine. Prerequisite: six credits of any combination of RGS, ERS, and WGS courses; RGS major/minor or ERS minor or WS major/minor. Consent of department. Offered Fall, Winter, Spring, Summer.

RGS 490 Cr.3

RGSS Senior Capstone

This senior capstone course is designed as a culminating experience for students completing a major in race, gender, and sexuality studies or a Hmong and Hmong-American studies certificate. This course has three content foci: 1) Students apply what they have learned throughout their major in RGSS. Alone or in groups, students research, explain, and develop a means for addressing a social phenomenon through application of the material acquired in their courses - particularly those in RGSS. This culminates in a presentation and paper to be given before an audience that may include RGSS faculty, CASSH faculty, and UWL students. 2) Students analyze the ways race, ethnicity, gender, class, and sexuality have played and continued to play in liberating oppressive roles in social, political, or cultural institutions. 3) Students identify and learn about careers such as journalism, marketing, community and housing development, media, health and medicine, community and union organizing, social work, and a wide variety of positions in federal, state, county, and local governments. Prerequisite: ERS 100, RGS 100, or WGS 100; concurrent enrollment in one of the following: RGS 335, RGS 336, RGS 340, or RGS 377. Offered Spring.

Radiation Therapy (RT) - Courses

Courses

RT 310 Cr.3

Pathophysiology

This course focuses on the pathophysiologic disorders that affect healthy systems across the life span. Theories of disease causation are introduced. Areas of emphasis include cellular and systemic responses, clinical manifestations and the response of tissue to radiation damage. Acquired, immune, infectious, carcinogenic and genetic alterations in body systems are included. Prerequisite: BIO 312, BIO 313; admission to RT. Offered Fall.

RT 325 Cr.3

Radiation Therapy Readings, Writing, and Research

This course introduces radiation therapy students to the language of radiation therapy and professional issues in the field by the use of selected readings. The Radiation Therapy Writing in the Major program will be introduced along with the types of writing practiced in the field. Students will learn basic research techniques and begin to apply them to their professional education. This course is designed to be taken concurrently with RT 310. Prerequisite: ENG 110 or ENG 112; STAT 145; concurrent enrollment in RT 310; admission to Radiation Therapy Program. Offered Fall.

RT 330 Cr.2

Professional Issues in Radiation Therapy

This course will provide students with knowledge related to the professional issues pertinent to the field of radiation therapy. Course topics will include: professional development, career advancement/ options, radiation therapist scope of practice and practice standards, certification and licensure, radiation therapy professional organizations, legislative issues in radiation therapy, as well as ethics and introductory law in radiation therapy. Prerequisite: admission to Radiation Therapy Program. Offered Fall.

RT 350 Cr.3

Patient Care Issues

This course will prepare students to work directly with patients in a health care setting. It will cover such topics as: communication and patient education, assessment, examination and monitoring of patients, body mechanics and patient handling skills, infection control, management of medical emergencies and CPR, nutritional counseling. Prerequisite: admission to Radiation Therapy Program. Offered Spring.

RT 370 Cr.2

Health Care Systems and Human Resources in Radiation Therapy

This course will provide entry-level radiation therapists with the basic health system and human resource knowledge. Course topics will include characteristics of U.S. Health Care System, insurance, health care access, reimbursement in radiation therapy, and applicable human resource topics. Prerequisite: admission to Radiation Therapy Program. Offered Spring.

RT 390 Cr.3

Medical Imaging

This course will provide radiation therapy students with theory and information regarding medical imaging procedures. Radiation therapists play a crucial role in imaging for treatment planning and treatment field verification. The course will provide instruction on analog and digital imaging, as well as various imaging modalities. Prerequisite: PHY 386; admission to Radiation Therapy Program. Offered Spring.

RT 400 Cr.1

Clinical Internship Seminar

This course will prepare students for the clinical internship portion of the program. Course topics will include: professional development, team building skills, radiation therapy terminology, basic clinical concepts, immobilization device construction, CPR, and radiation therapy equipment basics. Prerequisite: admission to Radiation Therapy Program. Offered Spring.

RT 401 Cr.3

Introduction to Radiation Therapy

This course, the first in the clinical internship, will provide the student with an overview of the profession of radiation therapy and its role in health care delivery and cancer management. Students will be oriented to the academic and administrative format of the internship site as well as safety practices of the hospital and radiation therapy department. The radiation therapy process will be identified and discussed along with critical steps in treatment procedures. Students will be prepared for working with patients by learning about charting and documentation as well as appropriate patient/therapist interactions. Prerequisite: RT 310, RT 350; admission to Radiation Therapy Program; assignment to a clinical internship site. Offered Summer.

RT 411 Cr.4

Principles and Practice of Radiation Therapy I

This course, taught during the clinical internship year, addresses the concepts of cancer treatment, focusing primarily on radiation therapy. Methods of improving therapeutic advantage are investigated. Students learn safe and effective use of equipment and accessories along with the rationale for their clinical application. Technical aspects of treatment simulation and delivery are developed. Treatment related side effects and their management and special patient situations are addressed. Prerequisite: RT 310, RT 350, RT 401, RT 471; admission to Radiation Therapy Program; assignment to clinical internship site. Offered Fall.

RT 412 Cr.4

Principles and Practice of Radiation Therapy II

This course, taught during the clinical internship, advances the student's knowledge of neoplastic disease management. Cancers and some benign conditions of various body sites are discussed in relation to natural history, treatment and prognosis. Technical aspects related to radiation planning and delivery are closely investigated as well as pertinent anatomical considerations, combination therapy, treatment results and the therapist's role in disease management. Lect. 3, Lab 2. Prerequisite: RT 411, RT 421, RT 472; admission to Radiation Therapy Program; assignment to clinical internship site. Offered Spring.

RT 421 Cr.3

Cross Sectional, Topographic and Radiographic Anatomy

This course, taught during the clinical internship, revisits anatomy specifically from an imaging perspective. Students will learn to identify structures and pathology on x-rays, CT and MRI scans and locate topographic landmarks on diagnostic and simulation films. Prerequisite: BIO 313, RT 390, RT 401; admission to Radiation Therapy Program; assignment to clinical internship site. Offered Fall.

RT 431 Cr.3

Radiation Therapy Physics

This course, taught during the clinical internship, expands the student's understanding of physics related to radiation therapy. Topics include the components and operation of linear accelerators and other treatment machines, brachytherapy, specification and modification of beam quality and characteristics, measurement of absorbed dose, treatment machine calibration, beam geometry and treatment with particles. Prerequisite: PHY 386, RT 401; admission to Radiation Therapy Program; assignment to clinical internship site. Offered Fall.

RT 435 Cr.3

Dosimetry and Treatment Planning

This course, taught during the clinical internship, focuses on the characteristics, measurement and manipulation of radiation dose delivery in treatment. This involves advanced concepts of methods of altering dose to optimize the effectiveness of the radiation treatment. Treatment planning for a variety of tumor sites and situations is discussed. Prerequisite: RT 411, RT 421, RT 431; admission to Radiation Therapy Program; assignment to clinical internship site. Offered Spring.

RT 437 Cr.2

Quality Management in Radiation Therapy

This course, taught during the clinical internship, focuses on the purpose and techniques of quality management in a radiation oncology program. The importance of documentation, consistent application of specified protocols and assessment of outcomes are addressed. The responsibilities of the radiation therapist within the radiation oncology team for quality functions are highlighted. Prerequisite: RT 411, RT 431; admission to Radiation Therapy Program; assignment to clinical internship site. Offered Spring.

RT 471 Cr.3

Clinical Practicum I

This course, offered the first summer session of the clinical internship, will orient students to the clinical operation of the internship site. Students will observe staff operations in the radiation therapy clinic, simulation, treatment planning, and treatment delivery areas. Prerequisite: RT 310, RT 350, RT 390; admission to Radiation Therapy Program; assignment to clinical internship site. Offered Summer.

RT 472 Cr.6

Clinical Practicum II

This course, offered fall semester of the clinical internship, will progress students' clinical skills from observation in simulation, treatment planning and treatment delivery to the point of participation and development of basic competencies. Prerequisite: RT 401, RT 471; admission to Radiation Therapy Program; assignment to clinical internship site. Offered Fall.

RT 473 Cr.6

Clinical Practicum III

This course, offered spring semester of the clinical internship, will offer students the opportunity to continue the process of developing competence and confidence in the areas of simulation, treatment planning and treatment delivery. They will demonstrate competence in intermediate and some advanced procedures. Students will also be given opportunity to work in dosimetry. Prerequisite: RT 411, RT 421, RT 431, RT 472; admission to Radiation Therapy Program; assignment to clinical internship site. Offered Spring.

RT 474 Cr.4

Clinical Practicum IV

This course, offered during the final summer session of the clinical internship, will complete the students' clinical education experience. By the end of this course, students will have developed proficiency and confidence in areas of simulation, treatment planning and treatment delivery. They will complete all required competencies. Opportunities to broaden the experience and work with different equipment, techniques and advanced procedures will be offered. Prerequisite: RT 412, RT 435, RT 437, RT 473; admission to Radiation Therapy Program; assignment to clinical internship site. Offered Summer.

RT 481 Cr.3

Seminar in Radiation Therapy

The course, offered during the clinical internship, is a capstone course in which students present patient case information, discuss application of radiation science theory, review and critique journal articles and prepare for the national certification exam. Prerequisite: RT 412, RT 435, RT 437; admission to Radiation Therapy Program ; assignment to clinical internship site. Offered Summer.

RT 499 Cr.1-3

Independent Study in Radiation Therapy

Independent study in radiation therapy may include individual readings and writing, projects, or research under the direction of a radiation therapy instructor. Repeatable for credit - maximum six. Prerequisite: admission by consent of the instructor and the radiation therapy program director. Consent of department. Offered Occasionally.

Radiologic Technology (RAD) - Courses

Courses

RAD 306 Cr.3-5

Imaging Procedures I

This course is a study of human anatomy and physiology geared toward students majoring in the radiologic sciences. The course explores the structure and function of the human body, its components, the integration of systems into one functional unit and the concept of homeostasis. This course covers the theoretical and practical principles of radiographic positioning and procedures of the chest, abdomen and upper extremity. Special attention is paid to assessing radiographs for diagnostic quality and to instill critical thinking skills. Laboratory practice sessions are included. Prerequisite: admission to Radiologic Technology Program. Offered Fall.

RAD 307 Cr.2-5

Seminar in Radiology I - Ethics, Law, and Medical Records

This course provides the student with an introduction to radiography practice. Topics include the ARRT code of ethics, HIPAA laws, ethical and legal issues, and licensure and professional organizations. Emphasis is placed on the student's role in medical imaging. This seminar course will include writing and class presentations about ethical and legal issues in the medical field. Prerequisite: admission to Radiologic Technology Program. Offered Spring.

RAD 308 Cr.2-5

Imaging Procedures II

This course is a study of human anatomy and physiology geared toward students majoring in the radiologic sciences. The course explores the structure and function of the human body, its components, the integration of systems into one functional unit, the concept of homeostasis and the basic mechanism of disease processes. This course also covers the theoretical and practical principles of radiographic procedures of the shoulder, lower extremity, pelvis, and vertebral column. Special attention is paid to patient positioning, assessing radiographs for diagnostic quality, and the development critical thinking skills. Laboratory practice sessions are included. Prerequisite: admission to Radiologic Technology Program. Offered Spring, Summer.

RAD 309 Cr.2-5

Imaging Procedures III

This course is a study of human anatomy and physiology geared toward students majoring in the radiologic sciences. The course explores the structure and function of the human body, its components, the integration of systems into one functional unit, the concept of homeostasis and the basic mechanism of disease processes. This course covers the theoretical and practical principles of patient positioning and procedures in radiography of the bony thorax, skull, paranasal sinuses, and facial bones. Special attention is paid to assessing radiographs for diagnostic quality for the development of critical thinking skills. Laboratory practice sessions are included to aid in the application of procedural methods. Lect. 1, Lab 2. Prerequisite: admission to Radiologic Technology Program. Offered Summer.

RAD 350 Cr.2-4

Introduction to Radiologic Sciences and Health Care

This course provides the student with an introduction to radiography practice. Topics include patient care, patient care equipment, patient assessment, aseptic & non-aseptic techniques, pharmacology. Emphasis is placed on the student's role in medical imaging. Laboratory simulation and skills testing is provided to enhance patient care skills. Prerequisite: admission to Radiologic Technology Program. Offered Fall, Spring.

RAD 351 Cr.1-5

Radiation Protection

This course studies the principles of radiation protection as they apply to exposure from ionizing radiation during medical procedures. It includes radiation health and safety requirements of federal and state regulatory agencies, accreditation agencies, and healthcare organizations. It focuses on the responsibilities of the radiographer in assuring correct radiation protection practices are followed for patients, personnel, and the public. Prerequisite: admission to Radiologic Technology Program. Offered Fall, Spring.

RAD 353 Cr.2-5

Principles of Imaging I

This course introduces the technical aspects of radiographic image production. Topics covered include production of the x-ray beam, image formation, image quality, scatter control exposure factor selection, automatic exposure control, and technique charts. Prerequisite: admission to Radiologic Technology Program. Offered Fall, Spring.

RAD 355 Cr.2-5

Radiography Clinical Education I

Students will participate in radiographic procedures at various clinical education centers and work toward achieving competency in radiographic practice. The first seven weeks is spent in providing the student with orientation to the clinical environment. Students will begin by observing in the clinical areas with participation increasing as the comfort level and procedural skill levels develop. Performance objectives and cognitive goals apply during the remaining weeks of the semester focusing on basic skill levels in radiography. A minimum of five successful competency tests must be completed by the end of this course. Prerequisite: admission to Radiologic Technology Program. Offered Fall.

RAD 360 Cr.1-5

Radiation Biology

This course teaches the principles of radiation biology. Topics covered include the various ways ionizing radiation interacts with matter from the atomic to the systemic levels of biologic organization including biologic effects of radiation exposure, early effects, late effects, somatic effects, and genetic effects. The concepts of stochastic and deterministic effects, risk models, and dose-response curves are also covered. Prerequisite: admission to Radiologic Technology Program. Offered Fall, Spring.

RAD 362 Cr.2-5

Principles of Imaging II

This course covers the technical aspects of radiographic image production. Topics covered include image acquisition, image receptors, processing, sensitometry, digital imaging, and fluoroscopy. Prerequisite: admission to Radiologic Technology Program. Offered Spring.

RAD 364 Cr.1-5

Radiography Clinical Education II

Students will participate in radiographic procedures at various clinical education centers and work toward achieving competency in radiographic practice. Students will rotate through various clinical areas with participation increasing as the comfort level and procedural skill levels develop. Performance objectives and cognitive goals apply during the remaining weeks of the semester focusing on basic skill levels in radiography. A minimum of 15 successful competency tests must be completed by the end of this course. Prerequisite: admission to Radiologic Technology Program. Offered Spring.

RAD 372 Cr.1-5

Radiography Clinical Education III

Students will participate in radiographic procedures at various clinical education centers and work toward achieving competency in radiographic practice. Students will rotate through various clinical areas with participation increasing as the comfort level and procedural skill levels develop. Performance objectives and cognitive goals apply during the remaining weeks of the semester focusing on basic skill levels in radiography. A minimum of 25 successful competency tests must be completed by the end of this course. Of the 25 successful competency tests, 10 must be completed with a clinical instructor. Prerequisite: admission to Radiologic Technology Program. Offered Summer.

RAD 401 Cr.2-5

Seminar in Radiography II - Research in the Radiologic Sciences

Topics will be geared toward research in the radiologic sciences. Students will gain experience working in groups and independently. Students will have the opportunity to read and critique professional journal articles and prepare an independent study project. The project can be completed as a scientific paper, scientific exhibit, or video exhibit. Topics must be pertinent to medical imaging and students must follow the essay and exhibit guidelines as published by the Wisconsin Association of Educators in Radiologic Technology (WAERT). Qualified projects will be submitted to the WAERT Student Symposium Essay and Exhibit Competition. Prerequisite: admission to Radiologic Technology Program. Offered Fall, Spring.

RAD 470 Cr.2-4

Radiologic Physics I

This course studies the principles of physics as they apply to radiologic science. It encompasses comprehensive coverage of the design and function of the x-ray imaging system components, x-ray production, the x-ray emission spectrum, and x-ray interactions with matter. Prerequisite: admission to Radiologic Technology Program. Offered Fall, Spring.

RAD 473 Cr.2-5

Imaging Procedures IV

This course covers advanced imaging procedures of the skeletal, CNS, and circulatory systems. The course includes guidelines for trauma and surgical radiography, pediatrics, bone densitometry, and the use of contrast agents in advanced radiologic procedures. It also covers advanced modalities including mammography, radiation therapy, nuclear medicine, and ultrasound. Prerequisite: admission to Radiologic Technology Program. Offered Fall.

RAD 474 Cr.2-5

Radiography Clinical Education IV

Students will participate in radiographic procedures at various clinical education centers and demonstrate competency in radiographic practice. Performance objectives and cognitive goals reinforce basic skills and focus on the achievement of advanced skills required of the practicing radiographer. Seventy mandatory competencies are required prior to program completion. A minimum of 40 successful competency tests must be completed by the end of this course. In addition, two of these successful competency tests must be completed with a clinical instructor, and two must be completed as impromptu competency tests to demonstrate continued proficiency. Prerequisite: admission to Radiologic Technology Program. Offered Fall.

RAD 475 Cr.2-5

Seminar in Radiography III - Physics II

This course studies the principles and equipment associated with advanced x-ray imaging and quality control. Topics cover mammography, fluoroscopy, interventional radiography, quality assurance programs, quality control testing, computed tomography, and magnetic resonance imaging. Prerequisite: admission to Radiologic Technology Program. Offered Fall, Spring.

RAD 477 Cr.1-5

Cross-Sectional Anatomy

This course is a study of human anatomy from a cross-sectional perspective. Special consideration is given to its application in the imaging modalities of CT and MRI. Prerequisite: admission to Radiologic Technology Program. Offered Fall, Spring.

RAD 478 Cr.2-4

Radiographic Pathology

This course is a study of disease processes and their radiographic appearance. Emphasis is on the detection of disorders and injuries relative to each body system and the diagnosis of pathological processes as aided by medical imaging. Prerequisite: admission to Radiologic Technology Program. Offered Fall, Spring.

RAD 479 Cr.2-5

Radiography Clinical Education V

Students will participate in radiographic procedures at various clinical education centers and demonstrate competency in radiographic practice. Performance objectives and cognitive goals reinforce basic skills and focus on the achievement of advanced skills required of the practicing radiographer. Seventy mandatory competencies are required prior to program completion. A minimum of 55 successful competency tests must be completed by the end of this course. In addition, two of these successful competency tests must be completed with a clinical instructor, and two must be completed as impromptu competency tests to demonstrate continued proficiency. Prerequisite: admission to Radiologic Technology Program. Offered Spring, Summer.

RAD 480 Cr.1-5

Seminar in Radiography IV - Image Analysis

This course covers the principles and practices associated with quality analysis and critique of the radiographic image. Emphasis is on the practical and empirical application of image analysis methods and techniques. Prerequisite: admission to Radiologic Technology Program. Offered Spring, Summer.

RAD 485 Cr.1-5

Professional Development in Radiography

This course is a comprehensive review of subjects deemed critical for the ARRT certification examination in radiography. Topics are in accordance with the content specifications of the ARRT certification examination for radiography. Activities include simulated certification examinations, discussions, and professional development seminars. Prerequisite: admission to Radiologic Technology Program. Offered Spring, Summer.

RAD 486 Cr.2-5

Radiography Clinical Education VI

Students will participate in radiographic procedures at various clinical education centers and demonstrate competency in radiographic practice. Performance objectives and cognitive goals reinforce basic skills and focus on the achievement of advanced skills required of the practicing radiographer. A minimum of 70 successful competency tests must be completed by the end of this course. In addition, one of these successful competency tests must be completed with a clinical instructor, and one must be completed as impromptu competency tests to demonstrate continued proficiency. Seventy mandatory competencies are required prior to program completion. Prerequisite: admission to Radiologic Technology Program. Offered Spring, Summer.

Reading (RDG) - Courses

Courses

RDG 475 Cr.1-3

Special Topics Seminar in Reading Education

Special topics in reading not covered by current reading courses. The particular topic selected to be determined by current need and interest. Repeatable for credit - maximum six. Prerequisite: junior standing. Offered Occasionally.

Recreation Management (REC) - Courses

Courses

+REC 150 Cr.3

Leisure, Quality of Life, and Well Being

This course will focus on the knowledge and skills necessary for integrating the major elements of well-being (physical, emotional, spiritual, environmental, intellectual, social, and occupational) through the lens of a leisure perspective into a balanced and fulfilling lifestyle throughout one's lifespan. Course content will include theories and methods related to leisure as the foundation for enhancing overall wellness, building coping strategies, and negotiating a balanced, fulfilling life. Additionally, this course will explore philosophical and historical aspects of leisure and recreation. Offered Fall, Spring, Summer.

REC 151 Cr.1

Introduction to Recreation Management

This course serves as an introduction to the field of recreation management focusing on the exploration of career areas in the profession and the service delivery systems which define recreation management. Offered Fall, Spring.

REC 201 Cr.3

Introduction to Outdoor Leadership

In this course, students will gain knowledge about the history and philosophy of outdoor leadership. The foundational elements related to outdoor recreation leadership will be explored through learning technical skills facilitation techniques. Students will also learn about the interrelationship between leisure behavior and the natural environment; administrative functions such as staffing, risk management, and transportation; and trip planning for outdoor settings. Offered Fall - Even Numbered Years.

REC 204 Cr.3

Introduction to Outdoor Education

This course introduces students to the regional ecology and engages them with specific ecological niches, e.g. wetland, forest, prairie and riverine, which frequently serve as outdoor recreation contexts. Students will learn about regional native and non-native plants, fauna and associated natural history while developing ecological observational and recording skills for the purpose of applying this information to outdoor recreation and education programming. Offered Fall - Odd Numbered Years.

REC 215 Cr.3

Introduction to Community Recreation

This course provides an overview of community-based recreation including municipal and non-profit recreation agencies. The course will focus on the histories, functions, and unique roles recreation holds for diverse communities. Offered Spring.

REC 301 Cr.3

Leadership and Programming in Recreation

This course provides practical knowledge and experiences on the essential elements and design concepts of program planning. Emphasis is placed on student involvement in planning, directing, and evaluating programs that enhance well-being for diverse populations in a variety of physical settings. Prerequisite: REC 150; REC major/minor. Offered Fall, Spring.

REC 304 Cr.3

Maintenance of Recreation Facilities

An introduction to the maintenance of recreation facilities, parks, and outdoor recreation areas. Prerequisite: junior standing. Offered Fall - Even Numbered Years.

REC 305 Cr.2

Operation and Management of Swimming Pools and Spas

This course explores the efficient operation and management of swimming pools, spas, and other aquatic facilities, including the promotion of attractive aquatic programs. Prerequisite: junior standing; REC major/minor or ESS-sport management major. Offered Fall - Odd Numbered Years.

REC 306 Cr.3

Environmental Ethics, Outdoor Recreation and Natural Resources

This course provides an overview of the natural resources used for outdoor recreational pursuits, an analysis of leisure activities dependent upon natural resources, a presentation of the issues associated with recreational land use and an introduction to environmental awareness and outdoor ethics. Recreation and natural resources at the national, state, local and private levels will be addressed with emphasis on the understanding of how outdoor recreation affects and is affected by natural resources. Offered Fall, Spring.

REC 310 Cr.3

Youth Development in the Recreation Profession

This course provides an overview of the theories and processes that form the foundation for youth services in the field of recreation in the United States. The course will explore the history of youth development with an acute focus on the theories and practices necessary for implementing strategic and effective youth development recreation programs. Offered Spring - Odd Numbered Years.

REC 315 Cr.3

Engaged Leisure

This course introduces students to contemplative techniques and strategies and a framework for enhancing leisure. Students will explore a contemporary service delivery model designed to improve the quality of leisure experiences and positively impact participant well-being. Prerequisite: REC 301; concurrent enrollment in REC 316; REC major/minor. Offered Fall, Spring.

REC 316 Cr.1

Engaged Leisure Experiences Lab

This lab will provide students with an overview of techniques necessary for effective facilitation of recreation and leisure experiences. Students will learn and apply techniques related to program leadership, understanding and managing group dynamics, and processing and debriefing experiences. Lab 2. Prerequisite: concurrent enrollment in REC 315. Offered Fall, Spring.

REC 317 Cr.3

Experiential Facilitation in Recreation

This course provides students with an overview of techniques necessary for effective facilitation of recreation and leisure experiences. Students learn and apply techniques related to program leadership, understanding and managing group dynamics, and processing and debriefing experiences. Prerequisite: REC 301 or concurrent enrollment. Offered Fall, Spring.

REC 320 Cr.3

Introduction to Tourism

An introduction to the nature and scope of tourism that is intimately related to recreation. This course provides a basic understanding of tourism from the tourism system perspective. The topics include tourist behavior, special-interest tourism, destination marketing, economic, social-cultural, and environmental impacts of tourism on a destination, and sustainable tourism development. In addition to the business and economic benefits of tourism, it also examines the social aspects of tourism. Offered Spring.

REC 325 Cr.3

Leisure in a Diverse Society

This course explores the increasingly diversified nature of society and its impact on individuals' experiences of leisure. A focus will be placed on the experiences of members of minority populations including issues related to race, gender, sexual orientation, gender identity, religion, social status, age, and disability. Students will be introduced to factors that influence the experience of leisure and leisure service delivery. Prerequisite: REC major/minor, inclusive recreation minor, or social justice minor. Offered Spring.

REC 330 Cr.3

Recreation Resource Management

Students will explore the interactions between natural resources and users to produce outdoor recreation. Students will learn to assess natural resources through carrying capacity, limits of acceptable change, competition, and complementarity among and between recreation uses and other resource uses. Methods for monitoring recreational impacts and approaches to managing resource quality and recreational opportunities will be addressed. Prerequisite: REC 150. Offered Spring - Even Numbered Years.

REC 335 Cr.3

Environmental Education

Based on experiential education and interpretive principles, students will learn methods and materials for effectively teaching environmental concepts in schools, communities, nature centers, camps, and parks. Students will also explore history, theory, philosophy and goals of environmental education programs. Prerequisite: REC 150. Offered Spring - Odd Numbered Years.

REC 340 Cr.3

Evaluation Methods and Practices

This course is designed to familiarize the student with basic measurement and evaluation methods used in recreation and leisure service field. In addition, the course shows students how to interpret current and future research findings in leisure and recreation journals, use basic quantitative and qualitative survey methods, interpret findings from commonly used research and statistical methods, and form conclusions and recommendations from survey findings. Prerequisite: STAT 145; ENG 307; REC major/minor. Offered Fall, Spring.

REC 345 Cr.3

Ecotourism

Students will examine theories, policies and practices specific to nature-based tourism. We will consider both the tourist and host community perspectives as we explore opportunities and constraints related to ecotourism development including social, environmental and economic outcomes. Offered Occasionally.

REC 351 Cr.3

Civic Engagement in the Recreation Profession

Recreation professionals need to be leaders in their communities and advocates for quality recreation and leisure. This course explores the recreation profession's role in civic engagement and identifies ways the general citizenry can be brought into public discussion on issues about recreation programs and facilities. Prerequisite: REC 340; REC major/minor; junior standing. Offered Spring.

REC 375 Cr.1-3

Workshop in Recreation Management

This is a group study of various recreation, leisure, or tourism topics. University professors and/or visiting lecturers will conduct the workshops. Repeatable for credit under different subtitles. Repeatable for credit - maximum 6. May require field trip. Prerequisite: REC or RTH major/minor. No student may earn more than six credits in REC 375, RTH 490, REC 491, and RTH 491. Offered Occasionally.

REC 390 Cr.3

Principles of Management in Recreation

Study of theories and techniques in leadership, group dynamics, and personnel management as they relate to programming and staff supervision in recreation agencies. Emphasis on personnel management techniques, including job analysis, recruitment, selection training, motivation, career development, and evaluation of paid staff and volunteers. Course includes issues common to full-time entry-level professional positions in recreation. Prerequisite: junior standing; REC major/minor. Offered Fall.

REC 400/500 Cr.3

Planning for Park and Recreation Facilities

Designed to equip the student with the basic knowledge necessary to understand and implement the planning process in the development of park and recreation facilities. This course is also designed to familiarize the student with federal, state and local statutes, and other related documents (U.S. Census, Wisconsin Administrative Codes, county and municipal ordinances). This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: REC 301 or RTH 456; REC major/minor; junior standing. Offered Fall.

REC 402/502 Cr.3

Risk Management in Leisure Service Organizations

This course will identify the primary components of risk management and detail legal aspects of tort liability, waivers, and indemnification agreements in leisure service organizations. The course will equip students with basic knowledge and skills necessary to appropriately manage legal liability and risk exposure associated within various professional leisure and recreation contexts. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: REC 390 or concurrent enrollment; REC major/minor; junior standing. Offered Fall, Spring.

REC 404/504 Cr.3

Budgeting in the Recreation Enterprise

Emphasis is placed on budget development, implementation and management decision-making within the recreation and park enterprise. This course introduces students to various contextual operational budgets within governmental and non-profit enterprises. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: ECO 110; REC 390 or concurrent enrollment; REC major/minor; junior standing. Offered Fall.

REC 405/505 Cr.3

Sustainable Tourism Development

This course will examine sustainable theories, policies, and practices in tourism. Students will learn about tourism planning and development from a sustainable tourism perspective. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: junior standing. Offered Spring.

REC 415/515 Cr.3

Camp Administration

This course provides an overview of the history of the camping movement and its evolution over time. In addition, the course will provide foundational knowledge necessary to successfully operate a camp facility including administration, day-to-day operations, staffing, camp counseling, and program activities. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: REC 150; junior standing. Offered Spring - Even Numbered Years.

REC 420/520 Cr.3

Revenue Management in Leisure Enterprises

This course covers prices and pricing from both managerial and behavioral perspectives in recreation, parks, tourism and event settings. While the managerial aspects of pricing include pricing policy/strategy and revenue management (defined as selling perishable service products to the right customer at the right time for the right price), the behavioral aspects include psychology of pricing, price fairness, price perceptions, and willingness-to-pay for non-market goods. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: junior standing. Offered Fall.

REC 440 Cr.1

Professional Wellness in Contemporary Leisure Services

A reflective practice and an ethic of care toward self and others is essential for recreation professionals to meet the diverse demands of contemporary leisure services effectively and successfully. This course allows students to explore personal and professional well-being, self-care, and reflective practice as they prepare to complete their program of study and begin their professional career. The course focuses on well-being and self-care from a variety of perspectives, and activities and practices in which students can develop reflective skills necessary for meaningful engagement with contemporary professional concerns while reducing stress and enhancing both short- and long-term well-being. Prerequisite: recreation management major; senior standing. Offered Fall, Spring.

REC 445/545 Cr.3

Meetings, Conventions, and Event Planning

This course will advance students' understanding of the event management profession. The course is intended to expose students to planning and management aspects in the areas of meetings, conventions, and other special events, while gaining an understanding of how special events impact tourism. Students will learn the professional skills necessary to plan, manage, and evaluate the success of a meeting, convention, or large-scale special event. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: REC 301 or RTH 456; junior standing. Offered Fall.

REC 449 Cr.1

Internship/Professional Preparation

In-depth coverage of the requirements for REC 450 internship and preparation of students for a smooth transition to the recreation management profession. Prerequisite: REC major; senior standing; completion of a minimum of two 50 hour experiences in recreation or parks; a minimum GPA of 2.50; and completion or concurrent enrollment in all remaining 300 and 400 level REC required courses except for REC 450. Offered Fall, Spring.

REC 450 Cr.12-16

Internship

Internship with a university approved recreation business or agency. An on-site practitioner and university faculty supervisor closely supervise the student's progress. The student experiences a smooth transition from university academics to the recreation management profession. Approved sites include public sector (e.g., parks and recreation agencies, public schools and universities); non-profit/private sector (e.g., voluntary and youth agencies, church organizations); and for-profit sector (e.g., fitness/sport centers, hospitality, tourism, and retail businesses). Prerequisite: REC 449; REC major; senior standing; 2.50 cum UWL GPA; all required REC courses completed. Offered Fall, Spring, Summer.

REC 481 Cr.1-3

Outdoor Pursuits

This course provides skill development and leadership techniques in outdoor recreation activities commonly associated with wilderness and roadless areas. Emphasis on backcountry ethics and safety will be stressed. A field trip will be required. Examples: backpacking, canoeing, bicycling, rock climbing, fishing, camping, and/or cross country skiing. Repeatable for credit - maximum six. Prerequisite: junior standing. Offered Occasionally.

REC 491/591 Cr.1-3

Workshops in Recreation and Parks

Group study of varying recreation and parks topics. University professors as well as visiting lecturers will be invited to address the students and conduct specialized phases of the workshops. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit under different topics. Prerequisite: junior standing; REC or RTH major/minor. No student may earn more than six credits in REC 375, RTH 490, REC 491, and RTH 491. Offered Occasionally.

REC 495 Cr.1-3

Independent Study in Recreation

Individualized study of areas not available in existing courses. Repeatable for credit - maximum six. Prerequisite: junior standing; REC or RTH major/minor. Consent of instructor. Offered Fall, Spring.

REC 497 Cr.1-3

Special Projects in Recreation Management

Individualized study of areas not available in existing courses or independent study. Program Project: planning, implementation and evaluation of a project. These projects will be completed under the supervision and direction of a staff member with permission from the student's advisor within the department. Examples include Camp Placement Day, Riverfest, and Oktoberfest events. Repeatable for credit - maximum six. Prerequisite: RTH 493; junior standing; REC or RTH major/minor. Consent of student's advisor. Consent of department. Offered Fall, Spring.

REC 499 Cr.1-3

Seminar in Recreation

Intensive study of some specific area of interest in recreation. Repeatable for credit - maximum 3. Prerequisite: minimum 2.75 GPA; senior standing; REC or RTH major/minor. Offered Occasionally.

Russian (RUS) - Courses

Courses

RUS 101 Cr.4

Russian in a Global Society I

The first of two introductory courses, this course is for students who have no prior knowledge of Russian. It develops basic communicative competence in the four skills of listening, speaking, reading, and writing. It also develops students' cross-cultural awareness while building their communicative strategies. Offered Fall.

+RUS 102 Cr.4

Russian in a Global Society II

The second of two introductory courses, this course further develops basic communicative competence in the four skills of listening, speaking, reading, and writing. It also develops students' cross-cultural awareness while building their communicative strategies. Prerequisite: RUS 101 or placement. Offered Spring.

+RUS 201 Cr.4

Russian Language and Cultures in Action I

The first of two intermediate-level Russian courses, this course continues to develop students' communicative competence in the four skills of listening, speaking, reading, and writing. It also develops students' cross-cultural awareness and competence while building their communicative strategies. Prerequisite: RUS 102 or placement. Offered Fall.

+RUS 202 Cr.4

Russian Language and Cultures in Action II

The second of two intermediate-level Russian courses, this course continues to develop students' communicative competence in the four skills of listening, speaking, reading, and writing. It also develops students' cross-cultural awareness and competence while building their communicative strategies. Prerequisite: RUS 201 or placement. Offered Spring.

+RUS 305 Cr.3

Golden Age Russian Literature and Culture

A course designed to introduce students to the great Russian writers of the 19th century, a period referred to as the Golden Age of Russian literature. Literary works will be discussed in their social, cultural, and historical context. The course will center on works by such writers as Pushkin, Lermontov, Gogol, Turgenev, Dostoevsky, Tolstoy, and Chekhov. Taught in English. Offered Spring - Even Numbered Years.

RUS 320 Cr.3

The Russian Mindset: Cultural Perspectives

A topical approach to Russian culture and civilization, this course is designed to provide an examination of Russian socio-political and cultural history, art themes, geographical composition, and human settlement. The role and effects of leaders and personas in Russian history (Ivan the Terrible, Peter the Great, Stalin) will also be analyzed. Students will further develop language skills by practicing grammatical structures and lexical items required to describe and analyze cultural products, practices, and perspectives. Prerequisite: RUS 202 or equivalent. Offered Spring.

RUS 351 Cr.3

Russian Identity through Film

This course is an intermediate-language course exploring the topic of Russian identity through contemporary Russian films. Adhering to the World Readiness Standards for Learning Languages (produced by ACTFL), the course will allow students to develop cultural competences and make connections with other disciplines such as political science and history. Students will further develop language skills by practicing grammatical structures and lexical items required to narrate plots, summarize films, describe characters, and analyze film themes. Prerequisite: RUS 202 or equivalent. Offered Fall.

RUS 398 Cr.1-3

Directed Studies

Individual reading and investigations in advanced Russian study. Course materials will vary according to the needs and interests of students. Repeatable for credit - maximum six. Prerequisite: RUS 202 or equivalent. Offered Occasionally.

School Health Education (SHE) - Courses

Courses

SHE 492 Cr.1

Student Teaching Seminar in School Health Education

This seminar course provides an opportunity to discuss and further develop teacher candidates' critical thinking regarding issues of the field and practice of educating school-age individuals. As a result of this course, teacher candidates will be able to discuss current issues experienced within their student teaching experiences as well as issues around the areas of professionalism, conflict resolution, and classroom management. Prerequisite: concurrent enrollment with SHE 494 or SHE 495; admitted to EC-MC or MC-EA certification program; passing content competency benchmarks. Consent of department. Pass/Fail grading. Offered Fall, Spring.

SHE 494 Cr.5-11

Student Teaching in School Health Education: Early Childhood-Adolescence

Student teaching is a full day, full school semester (~18 week), professional experience in a selected elementary, middle, or secondary school with qualified, approved cooperating teachers. Orientation, seminars and classroom projects required. May be repeated for credit in a subsequent semester for each additional licensure. Prerequisite: completion of all requirements in education, including special methods courses; recommendation by the appropriate education program faculty; 2.75 cumulative GPA and a 2.75 GPA in the major, minor, concentration. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

SHE 495 Cr.3-15

Teaching Internship

Teaching internship is a full day, full school semester, professional experience in selected PK-12 schools with qualified, approved cooperating teachers. Orientation, seminars and classroom projects required. Must apply and be selected for an approved internship opportunity through the Office of Field Experience. Wisconsin Internship Program placement and a State Intern License. Must be licensed as an intern according to PI 34.028 of Wisconsin State code for educator licenses. Registration occurs through the Office of Field Experience only. Prerequisite: completion of requirements in education, including special methods courses; recommendation by the appropriate education program faculty; 3.0 cum GPA; passing content competency benchmarks; acceptance into internship opportunity by Office of Field Experience. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

Sociology (SOC) - Courses

Courses

SOC/RGS 105 Cr.3

Introduction to LGBT Studies

This course will examine the cultural, legal, and political dimensions of LGBT life in the U.S. It will begin by exploring the social invention of heterosexuality and how personal and institutional interpretations of sexuality have historically informed the lives of LGBT people. The course also addresses class, racial and gender biases that especially confront queer communities of color in the U.S. Finally, the course looks at continued instances of hate crimes and homophobia against the backdrop of rights-based activism and the role that art and politics play in this interplay. (Cross-listed with RGS/SOC; may only earn credit in one department.) Offered Annually.

+SOC 110 Cr.3

Introduction to Sociology

An analysis of the complex relationship between society, the individual and the physical environment. It examines such questions as: how social patterns develop and persist over time; how the individual is shaped by social, cultural and environmental factors; why societies are constantly changing; and how individuals, through social interaction, shape their social world. Cross-cultural comparisons will be emphasized, showing how society and the physical environment affect the life choices of individuals. Offered Annually.

+SOC 120 Cr.3

Social Problems

Social analysis, critical thinking, and problem solving are introduced as basic social science skills. These skills are applied to major contemporary social problems related to deviant behavior, social inequality, social change, and problems associated with major societal institutions. A variety of individual and collective responses and social policy strategies at local, national, and international levels are examined. Offered Fall, Spring.

+SOC/RGS 150 Cr.3

Introduction to Social Justice

Students in this course will examine the concept of social justice through an intersectional and multidisciplinary lens. Students will begin with a critical investigation of the connections between the individual, the local, and the structural as they relate to justice and inequality in society. Social justice strategies are then evaluated, in case study fashion, through the lenses of gender, race, and class structures. (Cross-listed with RGS/SOC; may only earn credit in one department.) Offered Annually.

SOC 200 Cr.3

Foundations of Sociological Analysis

Designed for sociology majors, this course focuses on: (1) learning to think sociologically, including deeper comprehension of core sociological perspectives and concepts; (2) understanding the scientific methods in sociology; (3) the formulation of sociological research questions; (4) the resources and skills needed to effectively write a critical literature review; and (5) professionalization including how to build a curriculum vitae/resume, careers in sociology, presenting at professional conferences, and applying to graduate school. Sociology majors should take this course as soon as possible after completing SOC 110, as the skills taught in this course will benefit students in their upper division sociology courses. Prerequisite: SOC 110; sociology major. Offered Annually.

SOC 201 Cr.1

Careers in Sociology

The types of jobs in which sociology majors can work and the marketable skills to get them will be explored. Students will be required to research careers of interest to them in terms of job descriptions, growth and income outlooks, and the skills required. Internships and current job opportunities will be investigated and resumes, cover letters and job applications will be developed. Prerequisite: SOC 110 or SOC 120 or SOC 202 or SOC 212 or SOC 225. Pass/Fail grading. Offered Annually.

+SOC 202 Cr.3

Contemporary Global Issues

This course will offer a contemporary multi-disciplinary perspective regarding the major issues and trends confronting the global society as it enters the 21st century. Emphasis will be given to a critical review and assessment of the origin and present condition of the plethora of situations and problems affecting modern global society. The student will also learn to critically evaluate current and future events. The course will incorporate the views and approaches of the following disciplines: anthropology, economics, geography, history, political science, and sociology. Students may only earn credit in one of the following: ANT 202, GEO 202, HIS 202, POL 202, SOC 202. Offered Annually.

SOC 212 Cr.3

Marriage and Family

The major focus of this course is on understanding the contemporary institutions of marriage and family, and the changes that these institutions have experienced. The influences that gender, race/ethnicity, sexuality, socioeconomic class and age have on marriage and family experiences will be included in the investigation. Offered Spring.

SOC 216 Cr.3

Society and Schools

A social analysis and review of research on the school as a learning environment, a social organization and a societal institution. Specific topics include classroom interaction, school social climate, social inequalities in the schools, and selected educational controversies. Offered Occasionally.

+SOC 225 Cr.3

Sociology of Race and Ethnicity

This course offers a critical examination of the social dynamics shaping race and ethnicity in the United States. Students will examine both historic and contemporary issues related to race and ethnicity including the social construction of race, sources of prejudice, institutional and individual-level discrimination, power relations and stratification, and strategies for addressing racial and ethnic inequality. Emphasis is placed on the use of empirical evidence to evaluate popular beliefs about race and ethnicity in the United States. Offered Annually.

SOC 240 Cr.3

The Sociology of Sport and Leisure

An investigation of the interrelationship between sports/leisure time activities and society's social structure; its institutions and culture. Special emphasis is on the role social structure plays in the formation of values and attitudes related to sports and leisure time activities. Offered Occasionally.

SOC 250 Cr.3

Methods of Social Research I

This course introduces students to principles and procedures for the quantitative measurement of social phenomena. It emphasizes interpretation and uses of quantitative techniques in sociological data analysis. The primary goal is to provide students with skills and practical application of techniques used to understand how sociologists measure, evaluate and use individual and social indicators such as socioeconomic status, residential segregation, and crime statistics. The department strongly encourages students to take SOC 200 and SOC 250 concurrently. Prerequisite: SOC 110; sociology major. Offered Annually.

SOC 303 Cr.3

Generations and Age in the Social World

This course focuses on the many ways that society and age interrelate, and emphasizes gerontology. It examines sociological perspectives on the life course, particularly how historical context, timing, linked lives, and agency shape socialization and life chances, from youth to old age, through birth cohorts (e.g., Millennials; Baby Boomers). Specific social factors we will examine include: the social meanings of age; socialization into an age group; age discrimination and stereotypes; media representations of age; macro-level demographic changes; and social issues, policies, and controversies relevant to age. Prerequisite: SOC 110 or SOC 120 or SOC 202 or PSY 100 or ANT 101. Offered Alternate Years.

SOC 308 Cr.3

Disability and Society

This course is intended to introduce students to the sociological study of disability. In this course, students will study sociological understandings of disability and explore the experiences of people with bodily and mental differences. The sociological study of disability examines the commonalities of social life that exist and persist, despite the presence of biological differences. Additionally, it encourages critical evaluation of the influence of social systems, institutions, professional understandings of disability, and our own assumptions about the disability experience on the well being of people with disabilities and members of their families. Students will examine disability through understandings of identity (personal and collective), inequalities, social movements, social experience, sexualities, gender, race, class, intersectionalities, and physical and mental variation. We will examine the ways in which people with bodily and mental differences construct personal and collective identities and develop, support, and maintain communities; the effects of stigma on experiences of disability; and how disability is constructed by the cultural and structural demands of global capitalist societies. We will also explore the ways in which the experience of disability and disability studies can be used to further sociological understandings and to reexamine and reconceptualize taken-for-granted ideas about social life and experience, the social structure, and sociological theories and methodology. Prerequisite: one of the following: SOC 110, SOC 120, SOC 202, SOC 212, SOC 225, RGS/SOC 150, ANT 101, ANT 102, PSY 100, or PSY 200. Offered Annually.

SOC 310 Cr.3

Social Stratification

The nature, study, theories and types of social stratification systems are examined along with the forces contributing to their maintenance and disruption. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Alternate Years.

SOC 311 Cr.3

Rural and Urban Communities

Basic sociological concepts and principles are applied to understand social life within rural and urban communities. Focus will be on the political economy, the culture, and social problems of people as they live in different types of communities. Prerequisite: SOC 110 or SOC 120 or SOC 202. Offered Every Third Semester.

SOC 313 Cr.3

Law and Society

This course examines the law as a social construction. This involves exploring the notion that the civil and criminal law, deviance and criminal behavior, and various actors in the legal and criminal justice arenas are not to be taken for granted as natural, inevitable, and objective but rather, as rooted in social and political forces. Thus, this course explores the historical development of the law, social change, inequalities in the application of the law, why we obey or fail to obey the law, and heavily debated contemporary US laws. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Annually.

SOC 315 Cr.3

Religion and Society

Explores the social and cultural context in which religion functions; the effects of religion upon behavior and attitudes; the social organization of denominations, sects, cults and movements; the relationships between religion and other social institutions; religion and social inequality; social change and the future of religion. Special attention is given to world religions and ethical and public policy issues concerning religion, society, and the individual. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Alternate Years.

SOC/RGS 316 Cr.3

Gender, Sexuality, and Social Change in Religion

This course examines the various gender roles, norms, mobility, restrictions and empowerment that people experience within religious traditions, for example: Christianity, Judaism, Islam, Hinduism and Buddhism. Global case studies and engaging narratives focused on the intersections of gender, sexuality, race, and religion will be considered. Special attention will be paid to feminist laypersons and religious leaders who are reformulating traditional understandings and practices, and in turn, negotiating their agency within secular and spiritual spaces. Prerequisite: one of the following: ERS 100, RGS 100, RGS 150, WGS 100, WGS 130, WGS 150, SOC 110, SOC 120, EDS 206. (Cross-listed with RGS/SOC; may only earn credit in one department.) Offered Occasionally.

SOC 317 Cr.3

Sociology of Media

This course will critically examine the relationship between media, culture and society. In this course, we examine the impact of media in society across multiple areas including the history and structure of media organizations, media economics, methods used in media research, the relationship between political power and the media, and the distinction between news and entertainment. We will give special attention to theoretical approaches used to examine media in each of these substantive areas. Multiple forms of media will be examined including printed presses, radio, television, electronic news, virtual and online communities, film and social networking platforms. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Occasionally.

SOC 318 Cr.3

Surveillance and Society

Surveillance is now a prominent feature in the contemporary, post-9/11 world. In this class we will explore the concept of surveillance, its development, and the various ways that surveillance exists within the social world. This will include an examination of how surveillance intersects with, and is used by, the government and law enforcement, corporations, institutions such as the economy and schools, and you. A major organizing question of the course is this: How is the practice of surveillance changing our social life and our notions of public and private spheres? Prerequisite: SOC 110 or SOC 120 or SOC 202. Offered Spring - Odd Numbered Years.

SOC 319 Cr.3

Sociology of City Life

This course explores the political, social, cultural, economic, and religious aspects of city life. The metropolis offers unique insight into highly fascinating and unusual social worlds where urban inhabitants explore their identities and push the boundaries of self exploration, transcendence, and identity formation. The city is the site of human creativity and struggle, lust and love, risk and adventure, fear and uncertainty, resistance and subversion, joy and triumph, and the endless possibility of self realization. Yet, the city has changed in crucial ways with an accelerated gentrification process, sharp increases in poverty and inequality, shocking violence, increased hyper segregation, rapid immigration, growing unemployment and heightened distrust in public officials. This class goes deep into the depths of city life to explore its many wonders. Prerequisite: SOC 110 or SOC 120 or SOC 202. Offered Every Third Semester.

SOC 320 Cr.3

Demography

This course is designed as a basic survey of the field of demography. Sources of population data will be explored along with causes and consequences of population growth, composition and distribution. This course will focus on the concepts, measurements, trends and theories of the major demographic processes of fertility, mortality and migration. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Alternate Years.

SOC 321 Cr.3

Delinquency

This course is an overview of the sociological study of delinquency, with special emphasis on competing theoretical perspectives. In the process of learning about theoretical perspectives aimed at explaining delinquency, this course will pay special attention to gender delinquency, gangs, current events regarding delinquency and the U.S. juvenile justice system. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Spring.

SOC 322 Cr.3

Criminology

This course provides an overview of the sociological study of crime in the United States, with a special emphasis on patterns of criminality, competing theoretical explanations of crime, and societal responses to crime. As part of the examination of crime in the U.S., the course explores the definitions, measurement, and patterns of various types of criminal behavior; theory and research on crime; the roles of the victim and offender and the implications of public policy. Specific crimes covered include homicide, hate/bias crime, assault, and white-collar crime. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Fall.

SOC 323 Cr.3

Corrections and Penology

This course provides an interdisciplinary review of criminal punishment and correctional systems in the U.S. This course examines dominant punishment philosophies such as deterrence, incapacitation, retribution and rehabilitation. Both institutional and community-based approaches to corrections are covered and particular attention is devoted to understanding the social context of current practices, the nature of correctional populations, and the management of correctional systems. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Spring.

SOC 324 Cr.3

Criminal Justice

This course provides an overview of the United States criminal justice system. Issues relating to various segments of the criminal justice system, such as the administration of justice, the police, courts, and correctional systems are explored. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Fall, Spring.

SOC 325 Cr.3

Sociology of Mental Illness

An examination of mental health and illness, and mental health care systems in the U.S. and other industrialized and non-industrialized societies, including: the processes involved in identifying and recruiting patients into the mental health care system; a social analysis of psychotherapy, including talk therapies, medications, electro-convulsive treatment and psychosurgery; and social organization of mental hospitals and of community mental health centers; socio-legal issues related to mental illness; and a review and synthesis of social psychological and sociological theories relevant to understanding mental health and illness. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101 or PSY 100. Offered Fall.

SOC 326 Cr.3

Sociopharmacology

The study of the social structural factors related to drug use with emphasis on change at the societal level in dealing with the drug problem. This course examines the current and historical patterns of drug use in society. The emphasis will be on understanding the sequence of initiation, use, and misuse of psychoactive drugs. This course will focus on the social problems and social policy aspects of drugs. Question addressed include: How does society choose which drugs to treat as social problems? What are the potential versus real life effects of current laws and policies intended to curb drug use? What are the treatment and prevention strategies used today? What kinds of programs are successful and why? Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Spring.

SOC 327 Cr.3

Victimology

This course provides an overview of the field of victimology. It covers the historical development of the study of crime victims, the causes and consequences of being victimized, as well as responses by the criminal justice system and social service agencies to crime victims. Specific types of victims and victimization are discussed within this context, including victims of sexual assault, domestic/intimate partner violence, child abuse, and property crime. Prerequisite: one of the following: SOC 110, SOC 120, RGS/SOC 150, SOC 225, PSY 100, or RGS 100. Offered Annually.

SOC 328 Cr.3

Environmental Sociology

This course provides a framework for understanding the relationship between human societies and their physical environment. This course will focus on how environmental sociologists explain the social origins of environmental degradation, how environmental harms are unequally distributed among different communities and nations, and the role of environmental movements in protecting the physical environment. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ENV 201. Offered Spring.

SOC 330 Cr.3

Social Psychology

Social psychology from a sociological perspective. Primary attention is given to social behavior and communication patterns in terms of their genesis and change in the context of social groups and social relationships. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101 or PSY 100. Students may only earn credit in SOC 330 or PSY 241. Offered Alternate Years.

SOC 331 Cr.3

Restorative Justice

This course explores the fundamental principles and practices of restorative justice along with its theoretical and historical underpinnings. This course explores the needs and roles of key stakeholders in the criminal justice system (victims, offenders, communities, and justice systems), along with the strengths and weaknesses of restorative justice techniques in addressing those needs. Centered on secular, western understandings of justice, crime, and harm, this course teaches a practical, applied approach to conflict resolution, emphasizing strategies such as collaborative resolutions, mediations, and arbitration. Prerequisite: one of the following: SOC 110, SOC 120, RGS/SOC 150, SOC 225, PSY 100, or RGS 100. Offered Annually.

SOC 332 Cr.3

Environmental Justice

Environmental Justice has two distinct meanings. The first refers to the study of how and why environmental problems are experienced differently according to race, gender, class, and nationality. The second describes a social movement that works to fight unequal access to clean, healthy environments and the services that they provide. This course will focus on both aspects of environmental justice, examining the social dynamics that lead to environmental harms being distributed unequally among different communities and nations as well as the role of the environmental justice movement in fighting environment inequalities and injustices. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ENV 201. Offered Annually.

SOC 333 Cr.3

Human Rights Policing

This course focuses on how to apply human rights to the field of criminal justice, in particular, policing. The concept of human rights and its various meanings throughout time and place is analyzed. The course reviews the roles and functions of policing throughout human history, including its more sinister beginnings in the United States. This class challenges mainstream thought, orthodoxy, and voices of the powerful that dominate the fields of criminal justice. Students will move beyond the dominant discourse to better challenge structures of power, question the function of police in society, and scrutinize the age of mass incarceration. While the class offers a critical analysis of policing in society, it also explores alternative and creative solutions to the problems of policing in an increasingly precarious, but exciting, post-modern age. Students will have the opportunity to analyze and evaluate first-hand accounts of police officers applying human rights while in the line of duty. In the end, budding criminal justice professionals, including future police officers, will learn to apply human rights to their careers. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Spring - Even Numbered Years.

SOC 335 Cr.3

Collective Behavior

A systematic study of social processes which emerge in unstructured social situations; principles of behavior as expressed in crowds, mobs, panics, fads, fashions, social movements, personal organization and behavior in unstructured social situations. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Alternate Years.

SOC/RGS 337 Cr.3

Globalization, Women, and Work

This course examines the global and often exploitative experiences of women, migrating from one part of the world to another for work. As women leave their countries of origin, many find themselves working as nannies, sex workers, house cleaners and modern-day slaves in sweatshops. These work environments often create vulnerability, discrimination, and abuse of women within the private and public institutions of their host countries. The course will also use in-depth personal narratives and a focus on grassroots social movements to witness how women resist workplace policies and domestic laws to campaign for their rights, despite cultural and political constraints. Prerequisite: one of the following: ERS 100, RGS 100, RGS 150, WGS 100, WGS 130, WGS 150, EDS 206. (Cross-listed with RGS/SOC; may only earn credit in one department.) Offered Alternate Years.

SOC 338 Cr.3

Sociological Aspects of Work and Life

This course will explore the sociological impact of work and life demands in contemporary American society. Special emphasis will be given to how gender, sexual orientation, social class, race and ethnicity, and family structure affect individuals' ability to balance the demands of work and life. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Occasionally.

SOC 345 Cr.3

Race, Gender, and Crime

This course provides an examination of race and gender and the roles they play in victimization, offending, and the profession of criminal justice. This course will explore contemporary criminal justice issues, criminological theory, and criminal justice policy, particularly as they relate to racial and ethnic minorities, women, and LGBTQ+ people. Additionally, this course will explore the intersections of these social statuses as they relate to key issues in the criminal justice system. Prerequisite: one of the following: SOC 110, SOC 120, RGS/SOC 150, SOC 225, PSY 100, or RGS 100. Offered Fall.

SOC 350 Cr.3

Methods of Social Research II

An overview of the issues and methods involved in the process of scientific investigation of social phenomena. The limitations of, and ethical issues involved in, social research are examined. Data collection methods, both quantitative and qualitative, including surveys, observation, and secondary data analysis are investigated. Students propose and complete a research project, applying material learned in Sociological Research Methods I, including student application of various research techniques and computer-assisted data analysis. Prerequisite: SOC 200, SOC 250. Offered Fall, Spring.

SOC/RGS 363 Cr.3

Indigenous Peoples and the Environment

This course introduces students to Indigenous environmental issues. Topics include Western versus Indigenous perspectives on the environment, global distribution of environmental harms and hazards, Indigenous-led movements for environmental justice, toxic and nuclear waste disposal on Indigenous lands, mining and hydroelectric dams, public lands management systems, and sacred sites. Special attention is given to similarities and differences between Indigenous environmental issues globally versus in North America. (Cross-listed with RGS/SOC; may only earn credit in one department.) Offered Occasionally.

SOC 369 Cr.3

Sociology of Sexualities

This course uses a sociological perspective to examine human sexuality. Although biological explanations are often used to understand sexuality, this course will focus on how sexual attitudes and behaviors are shaped by society. We will focus on the methodological and theoretical approaches that are used in sociological studies of sexuality. This will include a brief overview of historical perspectives on sexuality; as well as contemporary debates about sexual identity; sexual practices and behavior; and how sexuality relates to issues of power and politics, of morality and social control. Prerequisite: SOC 110 or SOC 120 or SOC 202 or RGS 100 or ANT 101. Offered Alternate Years.

SOC 370 Cr.3

Sociology of Gender

This course explores the social construction, variation and consequences of gender categories across time and space. It also examines how gender identities are developed and how gender structures our experiences in education, work, families, the media and other institutions. Prerequisite: one of the following: SOC 110, SOC 120, SOC 202, SOC 212, SOC 225, RGS 100, RGS/SOC 105, or RGS/SOC 150. Offered Alternate Years.

SOC 380 Cr.3

Fat Studies and Body Politics

The purpose of this course is to explore the social construction, medicalization, and pathologization of fat in the United States. Fat will be examined as a social justice issue that intersects with race, class, gender, sexuality, and ability status. This course will explore the body politics behind attempts to redefine fat identity, including body positive and fat positive movements. This course will also examine fat activism as a means of addressing fatphobia and size discrimination. Emphasis will be placed on the use of historical and empirical evidence to evaluate common myths about fat bodies. Prerequisite: one of the following: RGS/SOC 105, SOC 110, SOC 120, RGS/SOC 150, SOC 202, ANT 195, ANT 202, ANT 212, ERS 100, PSY 100, or RGS 100. Offered Annually.

SOC 390 Cr.3

Sociological Theory

Sociological theory is a lens that is constructed based on detailed examinations of the world around us, and then used for viewing, studying, and understanding the social world in which we live. Beginning with early attempts to explain society, this course provides a critical survey of social theory and theorists over time, and traces the themes of sociological inquiry into the modern era. Theories covering society, groups, interactions and the human self will be summarized, explored, compared, contrasted, and, most important, applied to help better understand contemporary social conditions and life in modern societies. Prerequisite: SOC 200. Offered Fall, Spring.

SOC 399 Cr.3

Special Topics in Sociology

Investigation of areas and topics of current sociological interest not covered in the regular curriculum ranging from local to transnational issues. Repeatable for credit - maximum 12. Offered Occasionally.

SOC 404 Cr.3

Global Inequality

This course explores explanations for inequality between countries. Macro-sociological theories and comparative methods are used to analyze cross-cultural and cross-national differences and similarities in basic institutions, including family, education, and political economy. The main course objective is that students develop an understanding of the consequences of living in a world of global inequality. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101 or ANT 202. Offered Every Third Semester.

SOC 405 Cr.3

Quantitative Social Research Seminar

This course guides students through the completion of an independent quantitative sociological research project. Students conduct research on a topic related to their own interest within the field of sociology using standard quantitative methods such as survey research, evaluation research, or secondary data analysis. Each student formulates a sociologically relevant research hypothesis, designs the appropriate research methodology, reviews relevant theoretical and empirical literature, and gathers and analyzes data in a step-by-step process. The results of the research process are presented in a formal research paper. Prerequisite: SOC 350; SOC 390. Offered Annually.

SOC/ECO/GEO/HIS/POL/PSY 408 Cr.4

Teaching and Learning History and Social Studies in the Secondary School

This course will be integrated with a field experience. In the context of a real classroom, teacher candidates will learn how to plan for and assess student learning in history and social sciences. With a focus on content knowledge, teacher candidates will plan a variety of meaningful learning experiences, assess student learning, and monitor and modify instruction to best support the individual learners in the classroom. The teacher candidate will design, enact, and assess activities that advance student understanding to more complex levels. Teacher candidates will gain experience in monitoring the obstacles and barriers that some students or groups of students face in school and learn how to design learning experiences to support all learners. A multi-day, consistent schedule in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: EDS 351. (Cross-listed with ECO/GEO/HIS/POL/PSY/SOC; may only earn credit in one department.) Offered Fall, Spring.

SOC 409 Cr.1-3

Readings and Research in Sociology

Directed readings or research under the supervision of an instructor. Repeatable for credit - maximum six. Prerequisite: junior standing. Consent of instructor. Offered Fall, Spring.

SOC 410 Cr.3

Sociology Honors Project

The development and completion of an honors research project under the supervision of a faculty member. Prerequisite: acceptance into the Sociology Honors Program. Consent of department. Offered Annually.

SOC 414 Cr.3

Policy and Society

This course offers a critical analysis of social policy development and impacts in the United States today. Students will apply sociological theories to explain how demographic changes, collective behavior and other social changes converged to allow specific social policies to be designed, proposed and implemented. Students will also examine the impacts of such policies on the various social groups directly and indirectly affected and compare policies in the U.S. to similar policies in other countries. Social policies such as welfare reform, Social Security and federal agricultural policies are among the topics prospectively covered in this course. Prerequisite: SOC 110 or SOC 120 or ANT 101 or ANT/SOC 202; junior standing recommended. Offered Every Third Semester.

SOC 416 Cr.3

Qualitative Explorations

This course is designed to familiarize students with the major techniques of qualitative data collection and analysis used by sociologists and other social scientists. These include feminist methods, participant observation, in-depth interviewing, biographical methods, content analysis, archival research, and a variety of nonreactive techniques. This course will also address the links among theory, data, and methods and provide an appreciation for the qualitative tradition in social sciences. Students will learn how to conduct field research. The course will follow a seminar format emphasizing reading, group discussion, in- and out- of class exercises, oral presentations, original research and writing. Prerequisite: SOC 350; SOC 390. Offered Annually.

SOC 420 Cr.3

Health Care and Illness

This course introduces students to the social, political, and economic context of health and illness in society. The course is divided into four parts. First, we focus on social factors of illness, with a particular focus on the role of inequality in shaping health risks. We will discuss how we measure and quantify mortality and morbidity and the effect of social context. In the second part of the semester we focus on the meaning and experience of illness, with a particular focus on how different kinds of social deviance become categorized as medical, criminal, or personal issues in different societies and at different times. Next the course will focus on health systems and technologies, especially the political and economic configurations of health care provision in different countries. Finally, the course will consider the role of health professionals and issues of bioethics. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Fall.

SOC 421 Cr.3

Sociology of Intersectionality and Queer Studies

The term "intersectionality" has become prominently used on social media, in activists spaces, in academic works, and recently as buzzword in corporate America. In this course we will investigate intersectionality as an analytic tool and theoretical framework to examine the complex manner in which privilege and oppressive forms are interconnected. This course explores the intersections of social and political identities related to gender, sexuality, race, class, ethnicity, indigeneity, age, ability, culture, nation, and other forms of difference. Furthermore, we will explore new considerations for sociology along side intersectionality, such as Queer Theory, Quare Studies, Trans Studies, and Crip Theory. This is an interdisciplinary sociology course in which we will contend with contemporary contributions made by scholars across the social sciences, humanities, and natural sciences. This course will explore the following questions: How are marginalized identities constructed in the social world and within the context of institutions such as schools, hospitals, and prisons? How are individual identities intersectionally informed, specifically as it pertains to the experiences of people of color, LGBTQ+ people, women, and disabled people? What does intersectionality mean in an increasingly globalized world? What does it mean in the context of one's career trajectory? How do social movements and activists take up intersectionality? And where and how do intersectionality, critical race, and queer theory converge and diverge? Prerequisite: one of the following: SOC 110, SOC 120, SOC 225, RGS 100, RGS/SOC 105, or RGS/SOC 150. Offered Alternate Years.

SOC/PSY 422 Cr.3

Death, Grief, and Bereavement

A study of the interaction of individuals and families coping with dying and death in various social settings including hospitals, care facilities, and hospices. Topics include psychosocial aspects of grief and mourning, sociological dimensions of bereavement, and various rituals of funeralization in the U.S. and other societies. Special attention is given to case studies and medical/ethical decision-making at the end of life, as well as other aspects of the social organization of death, dying, and bereavement. Prerequisite: PSY 100 or SOC 110 or SOC 120 or ANT 101 or gerontology emphasis; junior standing. (Cross-listed with PSY/SOC; may only earn credit in one department.) Offered Annually.

SOC 429 Cr.3

Sociology of Deviance

This course provides an overview of the sociological study of deviance. Various definitions of deviance are examined within the context of individuals, behaviors, and groups who are considered deviants as well as those who apply the deviant labels. The course explores a variety of theoretical perspectives of deviance and social construction of deviance, the enforcement of social norms, and the social control systems that are established to respond to deviance. A variety of forms of deviance are covered, including: mental illness, drug and alcohol use, sexual deviance, and suicide. Prerequisite: SOC 110 or SOC 120 or SOC 202 or ANT 101. Offered Spring.

SOC 450 Cr.1-15

Internship in Sociology

An academically relevant field experience for majors and minors in sociology. The field experience will be supervised by the sociology staff. No more than six credits may be applied to a major in sociology and no more than three credits toward sociology minor. Repeatable for credit - maximum 15. Prerequisite: SOC 110; junior standing: cumulative GPA of at least 2.50. Consent of instructor. Pass/Fail grading. Offered Annually.

SOC 451 Cr.1-15

Internship in Criminal Justice

An academically relevant field experience for minors in criminal justice. Repeatable for credit - maximum 15. Prerequisite: SOC 324; junior standing; criminal justice minor. Pass/Fail grading. Offered Annually.

SOC 485 Cr.1-2

Research Apprenticeship in Sociology

The student will assist a faculty member in any phase of the research process including literature searches, research design, data gathering and data analysis. Repeatable for credit - maximum four. Prerequisite: SOC 200, SOC 250. Consent of instructor. Pass/Fail grading. Offered Fall, Spring.

SOC 486 Cr.1-2

Teaching Apprenticeship in Sociology

This course provides preparation and experience in a variety of instructional practices, strategies, and techniques. Students study theory and research on teaching and practice teaching skills under the guidance of faculty members. Repeatable for credit - maximum four. Prerequisite: SOC 200, SOC 250; junior standing; minimum 3.25 GPA. Consent of instructor. Pass/Fail grading. Offered Fall, Spring.

SOC 499 Cr.3

Seminar in Sociology

Intensive study of some specific area or problem of sociology. Repeatable for credit - maximum six. Prerequisite: SOC 350 or SOC 390. Consent of instructor. Offered Occasionally.

Spanish (SPA) - Courses

Courses

SPA 101 Cr.4

Spanish in a Global Society I

This course is the first of two introductory courses in Spanish. The five language skills are introduced: listening, speaking, writing, reading and culture. (Not open to students with more than two years of high school Spanish.) Offered Occasionally.

+SPA 102 Cr.4

Spanish in a Global Society II

This is the second introductory course in Spanish comprehension, speaking, writing, reading, and culture. Prerequisite: SPA 101 or placement based on UW System Spanish Placement Test score. Offered Occasionally.

+SPA 103 Cr.4

Spanish in a Global Society I & II

This is an introductory course that covers in one semester the essential content of first-year Spanish. It is designed for students with two or more years of high school Spanish or with previous experience learning a foreign language. Special emphasis is placed on facilitating the development of oral communication. Prerequisites: students with no evidence of prior study of Spanish are required to begin at SPA 103. Not open to students with credit in SPA 101 or SPA 102 (or equivalent). Offered Fall, Spring.

+SPA 201 Cr.4

Spanish Language and Cultures in Action I

This course is the first of two intermediate-level Spanish courses. Students continue to develop all language skills with special emphasis placed on refining speaking and listening comprehension. Prerequisite: SPA 102 or SPA 103 or placement based on UW System Placement Test scores. Offered Fall, Spring.

+SPA 202 Cr.4

Spanish Language and Cultures in Action II

This course is the second of two intermediate-level Spanish courses, designed specifically to transition students to upper-level content courses. Students continue to develop all language skills with special emphasis placed on refining reading and writing in Spanish. Topics in Spanish culture history and contemporary Spanish speaker countries society are explored while obtaining a grasp of more complex grammatical structure. Prerequisite: SPA 201 or placement based on UW System Placement Test scores. Not open to students with credit in SPA 221. Offered Fall, Spring.

+SPA 221 Cr.4

Introduction to Spanish for the Health Professions

In this course, students will strengthen their linguistic skills through the lens of the world of healthcare. More specifically, students will continue to work on the grammatical foundations of Spanish while acquiring vocabulary they can use in basic interactions with their patients. Particular attention will be paid to the experiences of patients and healthcare providers through cultural readings and stories. Class activities and assignments will be designed to allow students to understand and define cultural exchanges between Spanish-speaking patients and healthcare providers, and compare them with the products, practices and perspectives of their own cultural experiences. Prerequisite: SPA 201 or placement based on UW System Placement Test scores. Not open to students with credit in SPA 202. Offered Annually.

SPA 302 Cr.3

Faces of Spain: Conversation and Culture

This course is an introduction to the concepts of diversity and social responsibility through the study of the construction of national identity in Spain. A main focus will be on describing these themes in their social and cultural contexts, especially through the analysis of films in Spanish. This course explores issues related to origins of Spanish identity, diversity in communities, changing social structures, and independence movements. Students will also develop all four language skills, with an emphasis on oral proficiency (focusing on listening and speaking), along with critical thinking. Prerequisite: SPA 202 or SPA 221 or placement based on UW System Placement Test scores. Offered Occasionally.

SPA 305 Cr.3

Introduction to Hispanic Literature

An introductory literature course designed both for students desiring to develop an appreciation of Hispanic literature and those planning to pursue more advanced courses requiring a critical background. The course may include works from the following genres: narrative, poetry, drama and essay. Prerequisite: SPA 300 or (SPA 303 and SPA 304). Offered Fall, Spring, Summer.

SPA 307 Cr.3

Latin American Texts: Reading Between the Lines

In this course we will focus our attention on Latin American texts, reading for both their literal and figurative meanings so as to discover underlying messages of social justice. Because texts represent the communities in which they are created, students will learn how the text, as a cultural product, responds to the socio-historical contexts in which they are created. Along with reading and writing skills, students will build their vocabulary, expand their knowledge of grammar, and create their own short narratives. Prerequisite: SPA 202 or SPA 221 or placement based on UW System Placement Test scores. Offered Occasionally.

SPA 309 Cr.3

Spanish Culture Through Art

This course explores concepts of diversity and social responsibility in Spanish culture through the study of its artistic production. A main focus will be on exploring how artists represent and reflect on the most relevant social and cultural processes of the Spanish civilization through their art. This course also examines the impact other cultures have left in Spain throughout its history of migrations, focusing on cultural diversity. Students will investigate and reflect on the role of art as an agent to promote a sense of identity, awareness, and social responsibility in Spanish society. As students develop critical thinking and language skills - with an emphasis on written proficiency - they will explore architecture, painting, sculpture, music, performance, film, and mass-media in their social and cultural contexts from the origins of Spanish culture to the twenty-first century. Prerequisite: SPA 202 or SPA 221 or placement based on UW System Placement Test scores. Offered Occasionally.

SPA 310 Cr.3

Communities of Resistance in the Spanish-Speaking World

For Spanish majors and minors, this course will continue the process of developing global competency by refining oral proficiency skills and learning to engage with some of the cultural products and practices of different communities in the Spanish speaking world. Students will learn to use their language skills as a tool to discover themes related to social justice that inform each community under study. Such themes may include religion; violence; social, political, economic and criminal justice; oppression; power; ideology; corruption; environmental degradation; racism; sexism; homophobia; and the role of social change movements. The goal is to have the ability to better understand cultural perspectives of Spanish speaking communities, and students will learn how to independently identify and engage with the cultural perspectives of any community. Prerequisite: SPA 202 or SPA 221 or placement based on UW System Placement Test scores. Offered Occasionally.

SPA 312 Cr.3

Cinema and Social Justice in the Spanish-Speaking World

This course will develop oral expression skills in Spanish by focusing on the relationship between cinema, culture, and society in communities around the world where Spanish is spoken. Emphasis will be placed on the development of critical and analytical skills, as students will learn to interpret and compare film aesthetics, visual narratives, sound, and other aspects of cinema production in Spain, Latin America, the Caribbean, and Latino and migrant communities in the U.S. Students will engage with issues of diversity and social justice by understanding the relationship between the creation of meaning in cinema and the specific historic and socioeconomic processes of the communities and regions studied. General topics may include migration, gender and race disparities, trauma and memory, colonization and neoliberalism, among others. Film selection will vary according to the instructor of the course. Prerequisite: SPA 202 or SPA 221 or placement based on UW System Placement Test scores. Offered Occasionally.

SPA 320 Cr.3

Spanish Civilization

A study of the civilization of Spain, from pre-historic times to the present; this includes such topics as political developments, geography, literature, art, music, and the current situation. Prerequisite: SPA 300 or (SPA 303 and SPA 304). Offered Fall, Spring.

SPA 321 Cr.3

Spanish American Civilization

A study of the political, social, intellectual, artistic and literary development of Spanish America. Prerequisite: SPA 300 or (SPA 303 and SPA 304). Offered Fall, Spring.

SPA 322 Cr.3

Spanish for Mental Health Professionals

This intermediate-level Spanish course is specifically designed to prepare students to work with Latinx populations in the United States and abroad. Hispanics in the United States are expected to comprise nearly a quarter of the future workforce, and they are affected by mental health morbidity e.g., anxiety, depression, PTSD, alcohol and drug abuse, and family conflict, to cite a few, in part due to the lack of linguistically and culturally accessible services. In this oral proficiency course, to be conducted primarily in Spanish, students will not only learn the appropriate vocabulary and jargon associated with the discipline, they will also develop awareness of the strengths, resilience, and protective factors that emanate from Latina/o culture through a selection of adapted videos and readings, grammar exercises, in-class simulations, and a mock video consultation. At the end of the course students will be better positioned to deliver more linguistically and culturally congruent interventions. Prerequisite: SPA 202 or SPA 221 or placement based on UW System Placement Test scores. Offered Occasionally.

SPA 323 Cr.3

Spanish for Heritage Speakers

This course celebrates students' multilingual and multicultural skills while supporting their competency in reading, writing, and grammar in Spanish. Students achieve these goals by understanding linguistic diversity and social responsibility through the lens of language awareness. The course focuses on the many varieties of Spanish that exist, how these varieties are accepted or stigmatized in the context of the United States, and what this means for the speakers of these varieties. This course has a writing focus. Consent of department. Offered Annually.

SPA 325 Cr.3

Spanish for Professional Communication

This course will enhance a student's ability to function effectively in an increasingly important commercial language locally, in the United States, and abroad. A variety of adapted readings and videos will provide a solid foundation in the vocabulary and written discourse used in Spanish in a variety of professions such as business and marketing, sports sciences, psychology, and human resources, among others. This course will also develop a cultural understanding of the Spanish-speaking world, which is key to being able to successfully conduct formal conversations with native professionals. The course, to be conducted primarily in Spanish, includes various activities, grammar topics, and assignments that will provide preparation for the final task: writing a cover letter in Spanish for a job in the student's knowledge area where knowledge and/or proficiency of Spanish is required. This intermediate-level course has a strong written-proficiency focus. Prerequisite: SPA 202 or SPA 221 or placement based on UW System Placement Test scores. Offered Fall, Spring, Summer.

SPA 326 Cr.1

Current Events

A weekly discussion of current events in the Spanish-speaking world, based on readings, web-based news sources and television broadcasts in the target language. Students may take as many times as desired, but only three credits will count towards major/minor. Prerequisite: SPA 300 or (SPA 303 and SPA 304). Offered Fall, Spring.

SPA 330 Cr.3

Advanced Grammar and Syntax

A comprehensive survey of grammatical principles with an examination of the main syntactical elements of the Spanish language. Prerequisite: SPA 300 or (SPA 303 and SPA 304). Offered Fall, Spring.

SPA 331 Cr.3

Spanish Phonetics

Comparison of English and Spanish sounds. Systematic study of the production of Spanish sounds. Individual work with native tapes and recording of student's pronunciation and intonation. Prerequisite: SPA 300 or SPA 303. Offered Fall, Spring.

SPA 332 Cr.3

Spanish Speakers in the U.S.: Language, Community, (In)justice

In this course students develop and refine their listening comprehension and speaking skills by listening to and discussing the experiences of Spanish-speaking communities in the United States. Students will learn about language and identity by exploring Spanish across the generations and Spanish dialects in context; language ideology by reflecting on Mock Spanish and Spanglish; and language in society by understanding language access in places like schools, healthcare, and other public services. Prerequisite: SPA 202 or SPA 221 or placement based on UW System Placement Test scores. Offered Occasionally.

SPA 333 Cr.3

Spanish Beyond the Classroom: Navigating the Personal and Professional World

Throughout this course, students will explore diverse Spanish-speaking communities through the lens of both the professional world and the personal world. To do so, students will analyze the societal impacts of work and play in different cultural contexts while also reviewing and mastering important grammatical concepts in Spanish. Students will have opportunities to apply their knowledge regularly in real-world tasks related to the three modes of communication: interpretive, interpersonal, and presentational. Content and grammar instruction and practice will be presented in relevant cultural contexts, paying special attention to the ways in which different forms can be used to make meaning and do things with the language in different spheres of society. Students will build upon their previous language experience to achieve a greater level of proficiency for reading and writing in Spanish while also gaining a deeper understanding of diversity and social responsibility in both the professional and personal sectors. Prerequisite: SPA 202 or SPA 221 or placement based on UW System Placement Test scores. Offered Occasionally.

SPA 335 Cr.3

Writing to Effect Change: Global and Responsible Citizenship

In this writing-focused course, students will examine concepts of social responsibility and advocacy, paying specific attention to the power of language to effect change. In particular, students will analyze social justice movements, such as the plight of various indigenous groups, protests in Latin America, and other current events occurring in the Spanish-speaking world. Learners will analyze how language is used in these movements to advocate for change and will hone their skills of critical and creative expression through the completion of different written advocacy-related tasks. Such tasks seek to challenge stereotypes and confront biases, focusing specifically on perspectives of diverse communities in the Spanish-speaking world. Prerequisite: SPA 202 or SPA 221 or placement based on UW System Placement Test scores. Offered Occasionally.

SPA 352 Cr.3

Latin American Voices of Revolution

Revolutions inform the way nations identify themselves as individuals and as a community in the post-war era. These identities continue to inform the nation's culture long after the conflict ends. This course explores the way in which the social and historic aspects of the revolution form and inform the cultural output during and after the conflict. Students will examine and reflect on the formation of national identity, and through cultural texts such as narratives, film, art, and song they will interpret and engage with the many perspectives, or faces of revolution. Prerequisite: three courses from the following: SPA 302, SPA 307, SPA 309, SPA 310, SPA 312, SPA 322, SPA 323, SPA 325, SPA 332, SPA 333, SPA 335. Offered Occasionally.

SPA 353 Cr.3

Perspectives on Contemporary Spain: Culture and Society

Spain has gone through deep transformations during the last few decades that have affected the concept of its national and cultural identity. In the light of these changes, this course analyzes aspects of contemporary Spain related to its economy, politics, culture, and social structures. It investigates trends on immigration and emigration, nationalisms, role of the European Union, environmental concerns, and popular culture. This social and cultural context will also be analyzed through its practices and cultural products, especially through contemporary Spanish film. Prerequisite: three courses from the following: SPA 302, SPA 307, SPA 309, SPA 310, SPA 312, SPA 322, SPA 323, SPA 325, SPA 332, SPA 333, SPA 335. Offered Occasionally.

SPA 354 Cr.3

Artistic Expression and Society in the Spanish-Speaking World

This interdisciplinary course introduces students to the literary and artistic production of the Spanish-speaking world in its social and cultural contexts. Students will study the visual arts, short films and narratives, and poetry. A main focus will be on identities and cultural perspectives, as well as the development of intercultural competence. In addition, students will review language functions specific to the genres studied. Prerequisite: three courses from the following: SPA 302, SPA 307, SPA 309, SPA 310, SPA 312, SPA 322, SPA 323, SPA 325, SPA 332, SPA 333, SPA 335. Offered Occasionally.

SPA 355 Cr.3

Latinx in the U.S.: Culture and Society

This course is an introduction to the historic, social and cultural contexts of Latinx culture in the United States. Using an interdisciplinary approach, students analyze literature, art, music, media, film, performance, and social activism which reflect the main events and social movements in the trajectory of Latinx culture in the U.S. The course focuses on the impact of U.S. colonialism and imperialism on Latinx social systems in the U.S., as well as Latin American migrations and their impact on modern-day Latinx identities. The course also explores issues of statehood, racism, gender inequalities, cultural hybridization, and immigration. Conducted in Spanish with some materials in Spanglish. Prerequisite: three courses from the following: SPA 302, SPA 307, SPA 309, SPA 310, SPA 312, SPA 322, SPA 323, SPA 325, SPA 332, SPA 333, SPA 335. Offered Occasionally.

SPA 369 Cr.3

Topics in Hispanic Cultures

This course is designed to investigate areas of current social and cultural interest in Hispanic/Latin American culture. Topics will vary. Repeatable for credit - maximum six. Prerequisite: three courses from the following: SPA 302, SPA 307, SPA 309, SPA 310, SPA 312, SPA 322, SPA 323, SPA 325, SPA 332, SPA 333, SPA 335. Offered Occasionally.

SPA 370 Cr.3

Spanish for the Health Professions

In this course students will develop linguistic, professional, and cultural skills necessary to work with and advocate for Spanish-speaking patients in the healthcare professions. To do this, students will learn how Limited English Proficient patients experience the United States healthcare system and reflect on their own role as cultural brokers in this setting. Class activities and assignments are designed to allow the student to engage with and interpret the healthcare system from the perspective of Spanish-speaking patients. Prerequisite: three courses from the following: SPA 302, SPA 307, SPA 309, SPA 310, SPA 312, SPA 322, SPA 323, SPA 325, SPA 332, SPA 333, SPA 335. Offered Fall, Spring.

SPA 371 Cr.3

Business Spanish

This course enhances students' ability to function effectively in an increasingly important commercial language locally, in the United States, and abroad. This course is designed to introduce students to essential business terminology and language situations in common business contexts, reinforcing strategies for understanding, interpreting, and responding to new information. Students learn the importance of cultural awareness in doing business in Spanish-speaking countries or with Spanish speakers in the United States in general. The course, to be conducted primarily in Spanish, includes some translating and interpreting activities of special importance for managers and leaders. The course also develops students' geographic literacy and cultural understanding of the Spanish-speaking world, as these are central to conducting business successfully in Spanish. Prerequisite: three courses from the following: SPA 302, SPA 307, SPA 309, SPA 310, SPA 312, SPA 322, SPA 323, SPA 325, SPA 332, SPA 333, SPA 335. Offered Annually.

SPA 380 Cr.3

Spanish Language in Contexts

This course focuses on developing students' pragmatic competence in Spanish, or knowledge of how to use the language appropriately in different social contexts. Even with advanced linguistic proficiency, we can experience breakdowns in communication or even offend others if we are unaware of the cultural norms and perspectives that govern how to use linguistic forms appropriately in different situations. Thus, the objective of this course is to equip students with the linguistic and cultural knowledge they need to use Spanish appropriately in real and meaningful contexts. To do so, students will analyze how culturally-confined politeness norms, contextual elements, and speakers' identities impact how language is used to carry out different speech acts such as requests, invitations, and apologies, among others. Furthermore, students will compare variation in pragmatic norms among different Spanish and American English-speaking communities and reflect upon how cultural perspectives and identities influence how we do things with words. Prerequisite: three courses from the following: SPA 302, SPA 307, SPA 309, SPA 310, SPA 312, SPA 322, SPA 323, SPA 325, SPA 332, SPA 333, SPA 335. Offered Fall.

SPA 381 Cr.3

The Sounds of Spanish

Through a cross-linguistic approach, students reflect on the major phonetic and phonological differences between Spanish and American English in order to promote awareness and thus development of their second language pronunciation. Students will also analyze authentic and meaningful audiovisual materials, which will expose them to major geographical, social and contextual varieties of Spanish-speaking communities. Finally, following a sociolinguistic approach, students reflect on the relationship between phonetic/phonological variation and the formation, development and perception of social and cultural identities; as well as on the development of their own identity as adult speakers of a second language. Prerequisite: three courses from the following: SPA 302, SPA 307, SPA 309, SPA 310, SPA 312, SPA 322, SPA 323, SPA 325, SPA 332, SPA 333, SPA 335. Offered Annually.

SPA 382 Cr.3

Spanish Storytelling

This course focuses on developing learners' linguistic and cultural competence in Spanish at the ACTFL intermediate-mid level through the process of storytelling. Adopting a multiliteracies approach to learning, students will analyze and evaluate various types of stories and/or texts in Spanish and discuss the different visual, cultural, and/or linguistic elements. Content in this course might include, but is not limited to, TED Talks, podcasts, personal narratives, written histories, and short films. Through the analysis of the content in this course, students will then create a culminating story of their own, one in which they will share about diverse perspectives and identities that are present in the Spanish-speaking world. Prerequisite: three courses from the following: SPA 302, SPA 307, SPA 309, SPA 310, SPA 312, SPA 322, SPA 323, SPA 325, SPA 332, SPA 333, SPA 335. Offered Fall, Spring.

SPA 403 Cr.3

Studies in Hispanic Literature

This course is designed to allow flexibility in the study of current topics of interest in Spanish or Latin American literature. Prerequisite: two courses from the following: SPA 352, SPA 353, SPA 354, SPA 355, SPA 369, SPA 370, SPA 380, SPA 381, SPA 382. Offered Annually.

SPA 443 Cr.3

Studies in Hispanic Linguistics

This course introduces students to the discipline of linguistics through a focus on Spanish-speaking communities and the linguistic diversity amongst them. Students will learn key theoretical concepts in linguistics by addressing areas of study such as phonetics, phonology, morphology, syntax, semantics, pragmatics, acquisition of a language, variation, and linguistic change. Students will reflect on diversity and on their identity as speakers of multiple languages in order to develop their role as multilingual agents for social responsibility. Prerequisite: two courses from the following: SPA 352, SPA 353, SPA 354, SPA 355, SPA 369, SPA 370, SPA 380, SPA 381, SPA 382. Offered Annually.

SPA 450 Cr.1-4

National/International Intern Program

A course in Spanish individually tailored to fit career needs: cultural awareness, technical vocabulary in Spanish to prepare students who elect internship credits in other departments. Spanish majors or minors, or other students having the equivalency of SPA 202 may elect to take these credits off campus. Repeatable for credit - maximum four. Consent of department. Offered Occasionally.

SPA 498 Cr.1-3

Independent Study

Fieldwork, research and individual projects in a specific area of Spanish language, civilization or literature. Registration with the consent of instructor and the department chair. Repeatable for credit - maximum six. Prerequisite: two advanced courses and junior standing. Consent of department. Offered Occasionally.

SPA 499 Cr.1-3

Independent Study

Fieldwork, research, individual projects in a specific area of Spanish language, civilization or literature. Registration with the consent of instructor and the department chairperson. Repeatable for credit - maximum six. Prerequisite: two advanced courses and junior standing. Consent of department. Offered Occasionally.

Special Education (SPE) - Courses

Courses

SPE 200 Cr.3

Foundations of Special Education

This course will introduce teacher education majors to special education practices from historical, legislative, and people-centered recommended practices. General education and special education teachers have a shared responsibility to meet the needs of all students in learning environments that address individual needs and strengths. Teacher candidates will gain foundational understanding of exceptionalities from people, concepts, and historical perspective; policies, practices, and programs in special education; characteristics, prevalence, and supports and services for individuals with exceptionalities (as defined in current federal regulations); collaborative roles of general and special educators; and partnerships with families. Prerequisite: EDS 206 or EDS 308 or concurrent enrollment; sophomore status. Students cannot earn credit in both SPE 401 and SPE 200. Offered Fall, Winter, Spring, Summer.

SPE 207 Cr.3

American Sign Language and Deaf Culture I

Students will use American Sign Language to learn about communicating with individuals with a hearing loss in the elementary school setting. Students will explore deaf culture, intricacies of working with individuals with a hearing loss, including appropriate accommodations, modifications, and assistive technology. Offered Fall, Spring.

SPE 214 Cr.3

American Sign Language and Deaf Culture II

Students will extend the use of American Sign Language to learn about communicating with individuals who have a hearing loss. Students will further explore deaf culture, intricacies of working with individuals who have a hearing loss, including appropriate dialects, accommodations, modifications, and assistive technology. Prerequisite: SPE 207. Offered Fall, Spring.

SPE 300 Cr.3

Designing Sustainable Inclusive Classrooms

Establishing and maintaining productive learning environments is a key feature of an effective globally responsive educator's classroom. In this course, students will integrate foundational knowledge and learn how to create a classroom environment using developmentally-appropriate and responsive pedagogy based on the belief that all students have a variety of assets and all can learn at high levels. Key features of this class are understanding the role of the educator in intentionally creating learning opportunities uniquely designed for diverse learners and evaluating effectiveness in inclusive settings. Viewed through the lens of developmentally-appropriate and responsive practices, students will apply pedagogical frameworks to create a supportive classroom that will increase the likelihood of success for all learners and evaluate the impact of the practices to inform their teaching (e.g., Universal Design for Learning and Trauma-Informed Practices). Prerequisite: SPE 200 or SPE 401; EDS 402 or concurrent enrollment; admission to teacher education. Students cannot earn credit in both EDS 463 and SPE 300. Offered Fall, Winter, Spring, Summer.

SPE 340 Cr.3

Collaborative Partnerships and Transitions for Students with Disabilities

Effective communication and collaborative relationships between parents, students, and school and community personnel in a culturally responsive environment is an essential component of being a globally responsive educator. Students receiving special education services are supported by educational teams composed of students, parents, education professionals, and agency representatives. This course is designed to prepare special education teacher candidates for the responsibilities related to collaboration and transition associated with serving students with special education needs in grades K-12. This course focuses on effective collaboration processes as well as the development of transition plans for students with specific learning disabilities, emotional/behavioral disabilities, and intellectual disabilities; and the impact transition plans have on educational curriculum, instructional practices, career development, and placement practices. Prerequisite: SPE 200 or SPE 401. Offered Fall, Spring.

SPE 401/501 Cr.3

Introduction to Exceptional Individuals

This course is a general survey of exceptional individuals (disabled and gifted) from birth to 21 years of age. It provides an introduction to special education including history, law, definitions and classification systems, characteristics, etiology, provision of services and educational interventions and procedures related to the various disabilities covered under the law. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: successful completion/concurrent enrollment in one of the following courses: ART 361, BIO 454, CHM 454, ECE 327, EDS 351, EDS 402, ENG 355, HIS 304, MTH 454, MUS 378, MUS 379, or PHY 454; admission to teacher education; junior standing. Offered Fall, Winter, Spring, Summer.

SPE 420 Cr.3

Advanced Literacy and Math Practices for K-12 Students with Persistent Academic Challenges

This course will prepare teacher candidates with theoretical frameworks and practical applications of evidence-based practices in the areas of literacy and math. Teacher candidates will deepen their understanding of various developmental, remedial, and compensatory literacy and math evidence-based practices, critically analyze them, and apply their learning with students with exceptionalities in K-12 settings. These skills will allow teacher candidates to identify students who will experience school failure in the areas of math and literacy if they do not receive instruction that is responsive to their needs, evaluate and monitor their teaching effectiveness, and improve learning outcomes. Prerequisite: concurrent enrollment in SPE 460 or EDS 446; admission to teacher education. Offered Fall, Spring.

SPE 424 Cr.3

Advanced Practices for Students with Challenging Behaviors

This course will allow teacher candidates to use effective and varied behavior management strategies to support and enhance students' successful engagement and participation in the classroom. They will learn about laws and policies impacting behavior management planning and implementation; functional behavioral assessment and the use of its information in designing behavior intervention plans and making decisions for the student and the program; understand the rights and responsibilities of families and other professionals in assessing the needs of the student and the use of different behavior management strategies; and evaluate and modify instructional practices and monitor the progress of students with challenging behaviors. Teacher candidates are expected to perform at least 10 hours of clinical work with K-12 learners, by arrangement with the instructor. Lect. 2, Lab 1. Prerequisite: concurrent enrollment in SPE 460 or SPE 461; concurrent enrollment in SPE 446 or SPE 447 or SPE 455; admission to teacher education. Consent of department. Offered Fall, Spring.

SPE 430 Cr.1

Seminar in Special Education

This course provides teacher candidates, currently student teaching, to have directed discussions regarding issues that are occurring in the special education or inclusionary general classroom settings. Candidates will meet on-campus to analyze and discuss their experiences with their peers. This course is designed for persons seeking initial teaching licensure in general education and cross-categorical special education. Prerequisite: completion of all special education certification courses; completion of all general education licensure requirements for student teaching; junior standing; to be taken concurrently with SPE 483 or SPE 484. Consent of department. Pass/Fail grading. Offered Fall, Spring.

SPE 446 Cr.3

Methods in Cross-Categorical Special Education-Middle Childhood/Early Adolescence

This course focuses on curriculum, methods and strategies used in educating students with disabilities (emotional/behavioral disabilities, specific learning disabilities, and cognitive disabilities) at the middle childhood/early adolescence age level in a variety of educational placements. Topics covered within this course include academic instruction appropriate for students at the middle childhood/early adolescence age level. Prerequisite: SPE 401; EDS 402; admission to teacher education; concurrent enrollment with SPE 424 and SPE 461; junior standing. Consent of department. Offered Fall, Spring.

SPE 447 Cr.3

Methods in Cross-Categorical Special Education-Early Adolescence/Adolescence

This course focuses on curriculum, methods and strategies used in educating students with disabilities (emotional/behavioral disabilities, specific learning disabilities, and cognitive disabilities) at the early adolescence/adolescence age level in a variety of educational placements. Topics covered within this course include academic instruction appropriate for students at the early adolescence/adolescence age level. Prerequisite: SPE 401; EDS 351; admission to teacher education; concurrent enrollment with SPE 424 and SPE 461; junior standing. Consent of department. Offered Fall, Spring.

SPE 452 Cr.3

Assessment in Special Education

This course focuses on the role assessment plays in the diagnosis of a disability, determination of eligibility for special education services, and education of students with disabilities according to IDEA (the Individuals with Disabilities Education Act). Students will become familiar with the High Leverage Practices for assessment identified by the Council for Exceptional Children, including the use of multiple sources of information to develop a comprehensive understanding of a student's strengths and needs, interpretation and communication of assessment information with stakeholders to collaboratively design and implement education programs, and the use of student assessment data to analyze instructional practices and make necessary adjustments that improve student outcomes. Prerequisite: SPE 200 or SPE 401; SPE 300 or EDS 463 or concurrent enrollment; admission to teacher education. Offered Fall, Spring.

SPE 455 Cr.3

Methods in Cross-Categorical Special Education (K-12)

This course focuses on curriculum, methods, and strategies used in educating students with exceptionalities in various educational settings. Topics covered within this course include approaches to learning and teaching, Individualized Education Program (IEP), Social and Emotional Learning (SEL), learning strategies, content, and study skills. Teacher candidates will deepen their understanding and apply their learning with students with exceptionalities. Prerequisite: EDS 402; concurrent enrollment in SPE 424 and SPE 460; admission to teacher education. Consent of department. Offered Fall, Spring.

SPE 460 Cr.3

Field Experience in Special Education (K-12)

This course is a field experience for teacher candidates students seeking cross-categorical special education (K-12) licensure. Teacher candidates are placed in a variety of educational settings (e.g., special education setting, inclusive setting, interim alternative educational setting) in which they will observe, design, and implement various pedagogical practices with students with exceptionalities (i.e. specific learning disabilities, emotional and behavioral disorders, intellectual disabilities, etc.), and become familiar with special education teacher responsibilities. Teacher candidates will be under the direct supervision of a certified special education teacher and university supervisor (course instructor). Prerequisite: EDS 402; SPE 300; concurrent enrollment in SPE 424 and SPE 455 (concurrent enrollment in other field experience courses is not permitted); admission to teacher education. Consent of department. Offered Fall, Spring.

SPE 461 Cr.2

Field Experience in Special Education

This course is a field experience for students seeking special education licensure. Students are placed in a public school special education or inclusionary general education classroom setting in which they will experience daily activities with children identified with disabilities including specific learning, emotional/behavior, and cognitive disabilities and become familiar with special education teacher responsibilities. This experience consists of a partial-day classroom experience in school setting under the direct supervision of a teacher certified to teach students with mild disabilities at the middle childhood/early adolescence or early adolescence/adolescence age level. This experience provides a setting in which students are to develop observation and small group teaching experiences. This course is designed for persons seeking initial teaching licensure in general classroom instruction and cross-categorical special education. A multi-day, consistent schedule (typically three consecutive half days) to participate in the field experience classroom will be established by the course instructor in consultation with the teacher candidate and cooperating teacher. Prerequisite: SPE 401; EDS 351 or EDS 402 (concurrent enrollment with any other field course is not permitted); admission to teacher education; concurrent enrollment in SPE 424 and either SPE 446 or SPE 447; junior standing. Consent of department. Offered Fall, Spring.

SPE 475/575 Cr.1-3

Special Topics Seminar in Special Education

This course is designed to allow students to explore current topics, trends, and issues in the field of special education. Topic(s) to be studied are selected by the instructor based on interest and need. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit - maximum six. (Maximum three credits applicable to master's degree). Prerequisite: junior standing. Offered Occasionally.

SPE 483/583 Cr.1-11

Student Teaching Cross-Categorical Special Education: Middle Childhood-Early Adolescence

Student teaching is a full-day, full school semester experience in a public school special education or inclusionary general education classroom setting. Students are placed in a state approved special education program, serving students identified with disabilities (specific learning disabilities, emotional/behavioral disabilities, and/or cognitive disabilities) at middle childhood/early adolescence age level. This experience provides a setting in which students are to demonstrate teaching and assessment abilities related to students with special needs. Students work under the immediate supervision of a certified teacher and a university supervisor. This course is designed for persons seeking initial licensure in middle childhood/early adolescence education and cross-categorical special education at the middle childhood/early adolescence level. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: concurrent enrollment in SPE 430. Completion of special ed. certification courses; all requirements in education, including special methods courses; appropriate education faculty recommendation; 2.75 cum GPA and 2.75 GPA in major/minor/concentrations/prof. coursework; passing content competency benchmarks; passing scores in WI Foundations of Reading Test. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

SPE 484/584 Cr.1-11

Student Teaching Cross-Categorical Special Education: Early Adolescence-Adolescence

Student teaching is a full-day, full school semester experience in a public school special education or inclusionary general education classroom setting. Students are placed in a state approved special education program serving students identified with disabilities (specific learning disabilities, emotional/behavioral disabilities, and/or cognitive disabilities) at the early adolescence/adolescence age level. This experience provides a setting in which students are to demonstrate teaching and assessment abilities related to students with special needs. Students work under the immediate supervision of a certified teacher and a university supervisor. This course is designed for persons seeking initial licensure in early adolescence/adolescence and cross-categorical special education at early adolescence/adolescence level. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: concurrent enrollment in SPE 430. Completion of special ed. courses and all education requirements, including special methods courses; appropriate education faculty recommendation; 2.75 cum GPA and 2.75 GPA in major, minor, concentrations & professional coursework; passing content competency benchmarks; passing scores in WI Foundations of Reading Test. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

SPE 495 Cr.1-11

Teaching Internship in Special Education

Teaching internship in Special Education is a full day, full school semester, professional experience in selected PK-12 schools with qualified, approved cooperating teachers. Orientation, seminars, and other professional experiences are also required. Must apply and be selected for an approved internship opportunity through the Office of Field Experience. Must be licensed as an intern according to PI 34.028 of Wisconsin State code for educator licenses. Registration occurs through the Office of Field Experience only. Prerequisite: completion of other education course requirements; appropriate education faculty recommendation; 3.0 cum GPA; passing content competency benchmarks; passing scores in WI Foundations of Reading Test for SPE teacher candidates; acceptance into internship opportunity by Office of Field Experience. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

SPE 497 Cr.1-11

Student Teaching: Cross-Categorical Special Education (K-12)

This course is designed for candidates seeking initial licensure in K-12 cross-categorical special education. Student teaching is a culminating professional experience that spans "full days for a full semester following the daily schedule and semester calendar of the cooperating school" (per WI licensing statute 118.19(3)(a)) in selected K-12 schools with qualified, approved cooperating teachers. This experience includes placement in a regular and special education and/or inclusive regular education public school classroom that serves K-12 students with and without exceptionalities. This experience provides a setting where student teachers demonstrate planning, teaching, and assessment abilities related to K-12 students with and without exceptionalities. Student teachers work under the immediate supervision of regular and special education certified teachers and a university supervisor. Orientation, seminars, and other professional experiences are also required. Registration occurs through the Office of Field Experience only. Prerequisite: concurrent enrollment in EDS 492; completion of education requirements, including special methods courses; appropriate education faculty recommendation; 2.75 cum GPA and 2.75 GPA in major and professional coursework; passing content competency benchmarks; passing scores in WI Foundations of Reading Test. Consent of department. Satisfactory/Unsatisfactory grading. Offered Fall, Spring.

SPE 499 Cr.1-3

Individual Study

Reading and research in an area of student interest under the direction of an education instructor. Open to elementary and secondary education students with excellent records. Repeatable for credit - maximum three. Prerequisite: consent of advisor. Consent of instructor. Consent of department. Offered Occasionally.

Statistics (STAT) - Courses

Courses

+STAT 145 Cr.4

Elementary Statistics

An introductory course covering fundamentals of modern statistical methods. Topics include descriptive statistics, the binomial and normal distributions, estimation, and hypothesis testing. The z, t, F and chi-square test statistics are introduced. Instruction in computer use is included, and statistics software is used throughout the course for analyzing data files and carrying out statistical procedures. Prerequisite: MTH 050 or an appropriate placement test score. Offered Fall, Spring, Summer.

STAT 245 Cr.4

Probability and Statistics

An initial course in probability and statistics for students strong in mathematics. Probability topics include sample spaces, random variables, independence, and the binomial, Poisson, normal, and exponential distributions and their applications. Calculus-based methods will be used for analyzing continuous distributions. Statistics topics include descriptive statistics, sampling distributions, confidence intervals, hypothesis testing, regression, and ANOVA. Prerequisite: grade of "C" or better in MTH 208 or concurrent enrollment. Offered Fall, Spring.

STAT 345 Cr.3

Statistical Computing

An introductory course covering fundamentals of modern statistical computing. Topics include core programming concepts such as functions, data structures and debugging. Stochastic simulations and random variable generation are introduced, as well as accessing, filtering, and analyzing data from other resources. The R language will be used. Prerequisite: STAT 245 and CS 120. Offered Spring.

STAT 405/505 Cr.3

Statistical Methods

A survey of statistical methods from the point of view of how these methods are implemented with a standard statistics software package. Topics include descriptive statistics, graphical methods, tests of location, goodness of fit, simple and multiple regression, design of experiments, ANOVA, multiple comparisons, chi-square tests. Both parametric and nonparametric methods are treated. Computer use is an integral part of the course. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: grade of "C" or better in STAT 145 or STAT 245; junior standing. Offered Fall.

STAT 440 Cr.1

Statistical Consulting

Experiences will include interpersonal, written, and oral communication and interdisciplinary exposure as well as opportunities to apply statistical knowledge in a broad variety of situations. Students will take part in consultations (i.e. extracting information, listening, asking appropriate questions), apply knowledge in experimental design, data modeling, use of statistical software, and/or sampling; diagnose and conduct appropriate statistical procedures and interpret and communicate results. Reading past and present literature on statistical consulting also will be required. Repeatable for credit - maximum three. Prerequisites: grade of "C" or better in STAT 445 or STAT 446; consent of the Statistical Consulting Center director. Consent of instructor. Pass/Fail grading. Offered Fall, Spring, Summer.

STAT 441/541 Cr.3

Mathematical Statistics I

Review of discrete and continuous random variables. Moment generating functions, multivariate probability distributions, marginal and conditional probability distributions, functions of random variables, order statistics, Central Limit Theorem, point estimation and confidence intervals. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: grade of "C" or better in STAT 245 and MTH 310; junior standing. Offered Fall.

STAT 442/542 Cr.3

Mathematical Statistics II

Methods of estimating, including method of moments and maximum likelihood. Sufficient statistics, hypothesis testing, power of tests, likelihood ratio tests and introduction to regression and analysis of variance. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: grade of "C" or better in STAT 441; junior standing. Offered Spring.

STAT 443/543 Cr.3

Categorical Data Analysis

An introduction to categorical data analysis covering summaries and inference for categorical response and count data, analysis of contingency tables, generalized linear models for binary and count data, logistic regression, multcategory logit models and log-linear models for contingency tables with an emphasis on applications and implementation using computer software. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisites: grade of "C" or better in STAT 245 or STAT 405; junior standing. Offered Fall - Even Numbered Years.

STAT 445/545 Cr.3

Correlation and Regression Analysis

An introduction to simple linear regression, multiple regression, polynomial regression. Inferences, appropriateness of model, model diagnostics/adequacy, difficulties in the application of models are discussed. A computer package will be used. Course participants will be involved with hands-on statistical applications and consulting. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: grade of "C" or better in STAT 245 or STAT 405; junior standing. Offered Fall.

STAT 446/546 Cr.3

Analysis of Variance and Design of Experiments

An introduction to single factor, multiple factor, and randomized block designs in analysis of variance. Inferences, appropriateness of model, model diagnostics/adequacy, difficulties in the application of models are discussed. Design or structure of an experiment will be discussed. A computer package will be used. Course participants will be involved with hands-on statistical applications and consulting. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: grade of "C" or better in STAT 245 or STAT 405; junior standing. Offered Spring.

STAT 447/547 Cr.3

Nonparametric Statistics

An introductory course presenting the theory and procedures for using distribution-free methods in data analysis. Standard procedures, such as the Wilcoxon tests, Kruskal-Wallis, Kolmogorov-Smirnov, nonparametric confidence intervals, regression analysis, and powers of the tests will be included. Computer programs will be used when appropriate. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: grade of "C" or better in STAT 245 or STAT 405; junior standing. Offered Spring - Even Numbered Years.

STAT 448/548 Cr.3

Operations Research

An introductory course which applies mathematics/statistics to management decision making. Included are methods of optimizing systems, decision analysis, simulation, and reliability. Various programming techniques are introduced with the computer used as a tool where appropriate. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisites: grade of "C" or better in STAT 245 or STAT 405; junior standing. Offered Spring - Odd Numbered Years.

STAT 449/549 Cr.3

Applied Multivariate Statistics

An introduction to applied multivariate statistical methods covering multivariate analysis of variance, multivariate analysis of covariance, repeated measures design, factor analysis, principle component analysis, cluster analysis, discriminate analysis, and multivariate regression. Course participants will be involved with hands-on statistical applications. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: grade of "C" or better in STAT 245 or STAT 405; junior standing. Offered Fall - Odd Numbered Years.

STAT 452/552 Cr.1

Introduction to SAS

This course will provide students with an introduction to the statistical software SAS. Students will learn the syntax that is necessary to write SAS code to perform basic statistical techniques, including data manipulation, graphical displays, and common statistical inference procedures. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: STAT 405 or STAT 445 or STAT 446 or STAT 447 or STAT 449; junior standing. Pass/Fail grading. Offered Winter.

STAT 496/596 Cr.1-3

Special Topics in Statistics

Special topics in statistics not covered by regular courses taught in this department. The particular topic is decided by the instructor. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credits - maximum six. Prerequisite: junior standing. Consent of department. Offered Occasionally.

STAT 498 Cr.1-3

Independent Study

Directed readings or presentation of material not available in formal departmental courses under the supervision of a faculty member. Registration by written consent of supervising faculty member and department chair. Repeatable for credit - maximum six. Consent of instructor. Offered Occasionally.

STAT 499 Cr.1-3

Research Topics

An opportunity to pursue individual research topics under the direction of a faculty member. Depending on the nature of the research project, study is expected to involve substantial computational or theoretical work in addition to literature review and instruction. In addition to a written report to the supervising faculty member, expected outcomes may include: software, papers and presentations to the department and regional meetings. Not applicable to a statistics and mathematics major or minor. Registration by written consent of supervising faculty member. Repeatable for credit - maximum six. Offered Occasionally.

Teaching English to Speakers of Other Languages (TSL) - Courses

Courses

+TSL 200 Cr.1

Introduction to English Language Learners and Advocacy

In this course, students develop their understanding of and sensitivity to cultural diversity in the United States through the study of English learners (ELs) in public schools. Course topics include discovery of who ELs are, their educational rights, special challenges they may face in schools, and how to address those challenges. Students engage in inquiry-based learning as they ask essential questions about linguistic diversity, education, and educating a multilingual society. Students also learn to evaluate school environments for ELs, and practice skills needed to advocate for ELs. Students apply their knowledge through case studies, role plays, and online and face-to-face discussions. Seven-week course. Prerequisite: EDS 203 or EDS 206 recommended. Offered Fall, Winter, Spring.

TSL 250 Cr.3

Educating Multilingual Learners

In this course students develop their understanding of and sensitivity to the multilingualism and cultural diversity of the United States through the study of multilingual English learners (ELs) in public schools. Course topics include exploration of who ELs are, educational and linguistic rights, special challenges ELs may face in classrooms and schools, and how to overcome those challenges. Students engage in inquiry-based learning as they justify answers to essential questions about cultural and linguistic diversity in the U.S., education, and best practices for educating a multilingual society. Students learn to evaluate school environments for ELs and practice skills needed for equitable education for ELs. Prerequisite: sophomore standing. Offered Fall, Spring, Summer.

TSL 340 Cr.3

The Study of Language

This course offers an introduction to the study and nature of human language. Students investigate the structure of languages in general. They apply that structure to English and compare it to other languages. Prerequisite: ENG 110 or ENG 112; MLG 204 or a foreign language at the 102 level or higher. Students cannot earn credit in both ENG 331 and TSL 340. Offered Fall.

TSL 345 Cr.3

Intercultural Interactions

In this course, students learn about cultural influences in education and develop their ability to successfully navigate intercultural interactions while working with diverse populations within the United States or internationally. Course topics include definitions of culture, its deep structure and surface level expressions, relationships between culture and language and individual identity, how culture is expressed and transmitted in education, culturally-responsive teaching, and intercultural competence. Students compare their own cultural values across diverse groups and learn to apply culturally responsive pedagogy to diverse teaching contexts where they are likely to work in the future. Depending on individual focus, students create a case study or a unit plan focused on teaching culture and improving intercultural interactions. Students leave this course with greater cultural awareness, an understanding of how cultures are learned and taught, especially in educational settings, and the intercultural competence to live and work with those from cultures distinct from their own. Prerequisite: one of the following: AP foreign language score of 3 or higher; placement into 201-level or higher foreign language course; score 70 or higher on La Crosse Battery (non-native speakers of English); grade "B" or better in 102-level or higher foreign language course taken at UWL (taught in foreign language). Offered Spring.

TSL 400/500 Cr.3

Teaching English to Speakers of Other Languages (TESOL) Policies and Program Models

An overview of the teaching of English to speakers of other languages (ESOL) in the United States, topics include the history of bilingual and ESOL educational policies and practices in the U.S., historical and current program models for teaching English learners (ELs), and content-based instruction. Students learn how to plan for EL instruction in general education and ESOL classes. In addition, students develop skills to advocate for ELs in educational settings. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: TSL 345 or ENG 331; junior standing. Offered Spring.

TSL 420 Cr.1

TESOL Field Seminar

This course is designed to equip TESOL teacher candidates with a solid understanding of the theoretical and research-based second language acquisition processes in practice. Teacher candidates will learn about and practice the complex processes of planning instruction for ELs, engaging ELs in learning, and assessing EL learning. Candidates will further develop understanding and practices related to the topics of academic language, co-planning and co-teaching, intercultural communication, professionalism and advocacy and teacher performance assessment (edTPA). Prerequisite: TSL 400 or TSL 463 or concurrent enrollment; must be taken concurrently with EDS 402 or EDS 446; admission to teacher education. Consent of department. Offered Fall, Spring.

TSL 425 Cr.3

Global Issues in TESOL

The study of global English, cross-cultural second language proficiency standards, and sociopolitical issues related to educational practices. Students explore relationships between teaching English to speakers of other languages (TESOL) and current events in three or more world regions. Prerequisite: admission to teacher education or completion of one course from the following: ANT 196; CST 332; MLG 340; ENG 331, ENG 332, ENG 334; PHL 311; PSY 282, PSY 436; TSL 400. Offered Occasionally.

TSL 450/550 Cr.1-3

TESOL National/International Internship Program

Through the TESOL Internship, students gain practical experience tutoring or teaching non-native speakers of English in a variety of settings, including high school tutoring programs, adult literacy programs, after-school enrichment programs, university-level ESL programs, and EFL programs abroad. Undergraduates who are seeking ESL licensure must complete at least one credit in a high school (grades 9-12) setting. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit - maximum three. Prerequisite: TSL 400 or TSL 463 or concurrent enrollment; consent of TESOL director; junior standing. Consent of instructor. Pass/Fail grading. Offered Fall, Winter, Spring, Summer.

TSL 463/563 Cr.3

Teaching English to Speakers of Other Languages (TESOL) Methods

This course increases students' understanding of techniques and methods to teach English as a second or foreign language (ESL/EFL). Students identify the historical development of approaches and methodologies for teaching ESL/EFL, understand foundational principles of teaching ESL/EFL, and explore individual English learner (EL) differences, including age/grade level and language proficiency level, and how to account for these in instruction. Students also further develop the skills to plan instruction, including lesson and unit plans, and master teaching techniques for each of the four skills, grammar, and vocabulary. Additionally, students explore materials and technology available for teaching ESL/EFL. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: TSL 345 or ENG 331; junior standing. Offered Fall.

TSL 498 Cr.1-3

Independent Study

Field work, research, individual projects in a specific area related to teaching English to speakers of other languages. Repeatable for credit - maximum six. Prerequisite: junior standing. Consent of instructor. Offered Occasionally.

Theatre Arts (THA) - Courses

Courses

+THA 110 Cr.2

Theatre Appreciation

A study of theatre as an art form. Emphasis on the role of the audience as collaborators in the performance and their understanding and appreciation of the elements of a theatrical production. Offered Fall, Spring, Summer.

+THA 120 Cr.3

Acting for Non-Majors

This course emphasizes the development of the actor's instrument by introducing the student to the basic imaginative, physical, and vocal skills necessary for acting. It also enhances the student's understanding of the cooperative nature of acting. It prepares them to create, discuss, rehearse, and perform. The student will apply these techniques in an interactive studio setting. Offered Fall, Spring.

+THA 130 Cr.3

Multicultural U.S. Plays: Acting the Text

In this performance-based course students will study and perform dramatic literature from multiple cultures within the U.S. society. Plays will be selected from African-American, Asian-American, Native American, Hispanic-American, Lesbian/Gay/Transgendered/Bisexual and other cultures for study. Students will research cultural context, analyze the plays, develop basic skills in performance, and prepare and perform scenes from the plays under study, in order to enhance student awareness and exchange ideas about the multicultural nature of the U.S. No acting experience required. Offered Spring.

+THA 201 Cr.3

Dramatic Literature and Theatre Arts

From text to theatre, how does dramatic literature translate into live performance? To read plays is but one aspect of the art of drama. To create a theatrical performance from a playscript is to appreciate the full artistic potential of dramatic literature. International and multicultural theatre ranging from the classical to the contemporary will be the basis for explorations into the significance and beauty of the dramatic arts. An interdisciplinary approach in both content and method will be used as the dramatic literature is considered in the context of history and culture, literature and art. Offered Fall.

THA 210 Cr.3

Foundations of Theatrical Production

This course introduces the student to the fundamentals of theatre by exploring the theories and practices of production elements, script analysis and the specific goals, procedures and policies of the theatre arts department. Offered Fall.

THA 220 Cr.3

Acting I: Fundamentals

Theory and practice of the fundamentals of stage acting, including improvisational techniques, audition techniques, acting terminology and development of dramatic action. Offered Spring.

THA 221 Cr.3

Movement for the Stage

Theory and practice in training the actor's body to serve as a skillful and expressive means of communication. Emphasis on the student's awareness of movement as a foundation for character development. Offered Fall - Even Numbered Years.

THA 222 Cr.3

Voice and Diction for the Stage

Theory and practice of the fundamentals of vocal production: breathing control, articulation, projection, quality, and expressiveness for the actor. Offered Fall - Odd Numbered Years.

THA 223 Cr.2

Foundations of Dance

An introduction to the field of dance, this course examines the ideas, concepts, and trends important to studies in dance through lecture, readings, studio experience, and discussion. This course provides an overview of Western dance forms and esthetics, professional standards and practices related to rehearsal/productions, career options in dance, basic human anatomy, injury prevention, and conditioning for dance. Lect. 1, Studio 2. Offered Fall - Even Numbered Years.

THA 225 Cr.2

Jazz Dance I

This course is an introduction to the fundamentals of jazz dance technique. This course focuses on basic jazz dance vocabulary, style, rhythms, and progressions while developing strength and flexibility as well as an anatomical awareness of the dancer's body. Lect. 1, Studio 2. Offered Fall - Odd Numbered Years.

THA 226 Cr.2

Tap Dance I

This is an introduction to the fundamentals of basic tap techniques, style, and rhythms. Lect. 1, Studio 2. Offered Fall - Odd Numbered Years.

THA 227 Cr.2

Ballet Dance I

This course is an introduction to the fundamentals of ballet dance techniques. This course focuses on the history, vocabulary, and techniques of beginning ballet. Lect. 1, Studio 2. Offered Fall - Even Numbered Years.

THA 228 Cr.2

Modern Dance I

This course is an introduction to the fundamentals of modern dance techniques. Students learn and execute the fundamentals of modern dance by practicing movement exercises and dance phrases designed to increase knowledge of modern dance. Lect. 1, Studio 2. Offered Spring - Even Numbered Years.

THA 229 Cr.2

Musical Theatre Dance I

This course is an introduction to the fundamentals of dance techniques employed by musical theatre. This class will focus on the different styles and techniques of musical theatre dance. Lect. 1, Studio 2. Offered Fall - Even Numbered Years.

THA 231 Cr.3

Stagecraft

Theory and practice of scenic construction. A study of the stage and its equipment; the planning, building and painting of scenery and the practical aspects of stage lighting. Offered Spring.

THA 232 Cr.3

Costume Crafts

Theory and practice of basic costume construction. Emphasis on the construction of stage costumes and accessories, including, but not limited to, basic pattern adaptation, millinery techniques, costume jewelry techniques and mask construction. Prerequisite: THA 210 for theatre majors and minors. Offered Spring - Even Numbered Years.

THA 240 Cr.3

Rendering for Theatre

This course will focus on the study of the elements and principles of rendering and their application to theatrical design. Students will focus on application of various rendering techniques used by scenic, costume, lighting and makeup designers in the creative process of interpreting a play script and translating it into visual form. Repeatable for credit - maximum six. Offered Fall - Odd Numbered Years.

THA 241 Cr.3

Stage Makeup

The theory and practice of the fundamentals of painted theatrical makeup, including various theatrical makeup materials and their applications. The course will rely heavily on the imagination and creative skills of the student and will include research in physical analysis, character analysis, and color theory. Each student will serve as the makeup designer for all projects in this course. Offered Fall - Even Numbered Years.

THA 250 Cr.3

Theatre Studies I: Antiquity to the 18th Century

This course is a survey of Western theatre history, dramatic literature and theory in cultural context from origins through the 18th century. Particular attention is paid to the relationship of theatre to religion during antiquity and to the relationship of theatre to nation-building in the 17th and 18th centuries. Recommended to be taken before THA 350. Offered Fall - Odd Numbered Years.

THA 260 Cr.1

Participation in Theatre Arts Activities

A course for any university student who wishes to gain academic credit for participation in theatre arts. Students receive individual counsel, criticism and evaluation. Repeatable for credit - no maximum. Consent of instructor. Offered Fall, Spring, Summer.

THA 270 Cr.1-2

Music Theatre Vocal Study

Intensive study of the artistry of singing solo vocal musical theatre repertoire. Study will promote growth in and understanding of: musical theatre vocal technique, breath, body alignment, healthful use of the speaking voice, projection, diction and elocution for the stage. Technical work will be applied through study and performance of musical theatre repertoire. Attendance at a weekly studio class and final performance required. This course is intended for theatre majors pursuing an emphasis in music theatre, after completion of their applied voice requirement in their music minor. Repeatable for credit. Prerequisite: completion of applied voice requirement in music minor; theatre arts major-music theatre emphasis. Offered Fall, Spring.

THA 271 Cr.1-2

Singing for the Stage

Intensive study of the artistry of singing solo vocal musical theatre repertoire. Study will promote growth in and understanding of: musical theatre vocal technique, breath, body alignment, healthful use of the speaking voice, projection, diction and elocution for the stage. Technical work will be applied through study and performance of musical theatre repertoire. Attendance at a weekly studio class and final performance required. This course is available to theatre performance majors NOT pursuing an emphasis in music theatre. Repeatable for credit. Consent of instructor. Offered Fall, Spring.

THA 290 Cr.3

Stage Management for the Arts

This course will provide an introduction to Stage Management for the arts as well as a working understanding of the job of a stage manager. Emphasis on practical theory as well as the history of stage management will be combined with critical theories of running a production. The course will culminate in preparing students to stage-manage for a realized production. Offered Fall - Odd Numbered Years.

THA/MUS 304 Cr.3

History of Music Theatre

A survey of music theatre history and literature from origins to the present and its effect on popular culture, this course provides an understanding of the development of music theatre into the present day. Particular attention is given to the writers and composers who greatly influenced and/or continue to influence the development of this art form. Prerequisite: ENG 110 or ENG 112. (Cross-listed with MUS/THA; may only earn credit in one department.) Offered Spring - Odd Numbered Years.

THA 305 Cr.3

History of Dance

This course explores perspectives on dance in the 20th and 21st centuries including its relation to society, culture, and its future directions. Dance as an art form and as a reflection of historical events, cultural forces, and controversies are examined. Various forms of dance will be observed through readings, research, and video recordings. Offered Fall - Odd Numbered Years.

THA/MUS 310 Cr.3

The Singer/Actor

This course examines the process of acting through song and verse. Its purpose is to explore a variety of theoretical and practical approaches integrating acting, vocal and stylistic techniques which support and strengthen each other. Prerequisite: THA 220 or THA 222; MUS 266 and MUS 268 (or MUS 235, MUS 236, MUS 237, and MUS 238). (Cross-listed with MUS/THA; may only earn credit in one department.) Offered Fall - Odd Numbered Years.

THA 311 Cr.2

Dance Improvisation

This course explores the movement fundamentals of space, time, and energy in generation of spontaneous group composition. Experiencing dance improvisation is a skill for developing the core conceptual elements of dance. Lect. 1, Studio 2. Offered Spring - Odd Numbered Years.

THA 320 Cr.3

Acting II: Characterization

Theory and practice of realistic acting techniques and textual analysis in the development of characterization. Monologues and scenes from realistic drama to be performed. Prerequisite: THA 220. Offered Fall.

THA 321 Cr.3

Acting III: Styles

Theory and practice of advanced techniques of acting with emphasis on styles of acting from Greek to the present. Monologues and scenes from various theatrical periods to be performed. Prerequisite: THA 220, THA 320. Offered Spring.

THA/MUS 324 Cr.3

Cabaret Performance Workshop

Students work together in a workshop format to rehearse and eventually perform a cabaret set consisting of ensemble numbers, duets and solos on a common theme. Each number will be carefully rehearsed and staged. This is a studio course requiring active and regular participation. Repeatable for credit - maximum six. Prerequisite: admission to the music theatre emphasis. (Cross-listed with MUS/THA; may only earn credit in one department.) Offered Fall - Even Numbered Years.

THA 325 Cr.2

Jazz Dance II

This is an advanced course on jazz dance technique. This course focuses on jazz dance vocabulary, style, rhythms, and progressions while developing strength and flexibility as well as an anatomical awareness of the dancer's body. Lect. 1, Studio 2. Prerequisite: THA 225. Offered Fall - Odd Numbered Years.

THA 326 Cr.2

Tap Dance II

Through exercises, choreography, and discussions, this course is a dance movement class focusing on learning and refining tap techniques, style, and rhythms. Higher level techniques are incorporated into the understanding and exploration of both tap choreography and history. Lect. 1, Studio 2. Prerequisite: THA 226. Offered Spring - Even Numbered Years.

THA 327 Cr.2

Ballet Dance II

This dance movement class focuses on the advanced theory and techniques of ballet. Students work on advanced techniques, performance qualities, musicality, and artistry. Lect. 1, Studio 2. Prerequisite: THA 227. Offered Spring - Odd Numbered Years.

THA 328 Cr.2

Modern Dance II

This course provides the student with advanced development and practice in the diverse styles of contemporary/classical principles of modern dance technique. Advanced modern dance includes active participation in center, movement across the floor, proper alignment, improvisation, and personal growth within performance techniques. Lect. 1, Studio 2. Prerequisite: THA 228. Offered Spring - Even Numbered Years.

THA 329 Cr.2

Musical Theatre Dance II

This course is designed to give the musical theatre performer the essential training in various dance techniques, an understanding of the structure behind stage choreography, and an insight into the necessary showmanship and performance of that choreography. Students explore various dance styles through technical training and explore their historical context and artistic impact on the musical theatre genre. Students engage in comprehensive technique and training practices, movement analysis, and anatomical study, as well as prepare performance pieces in a variety of dance styles and techniques of developing choreography. Lect. 1, Studio 2. Prerequisite: THA 229. Offered Spring - Odd Numbered Years.

THA 330 Cr.3

Scene Painting

Theory and practice of scene painting techniques for the theatre. By studying theories utilized by professional scenic artists, students will learn to interpret a designer's rendering or scaled elevation. Practical exercises will introduce students to the techniques necessary to reproduce the aesthetics of designer's renderings or scaled elevations as actual scenic pieces. Offered Fall - Even Numbered Years.

THA 331 Cr.3

Theatre Technology

The research and application of current technology in the theatre, including the exploration of new materials and construction techniques. The course will include an introduction to computer-Assisted drafting and design, the operation and maintenance of new technologies in the theatre facility, and the examination of health, safety, and liability issues. Prerequisite: THA 210, THA 231. Offered Fall - Even Numbered Years.

THA 340 Cr.3

Scenery Design

A course in the principles and practices of designing stage scenery. Emphasis is on developing the creative abilities of the designer. Prerequisite: THA 210, THA 231, THA 240. Offered Spring - Even Numbered Years.

THA 341 Cr.3

Lighting Design

An introductory course in the principles and practices of designing and executing stage lighting. Emphasis is on developing the creative abilities of the designer. Prerequisite: THA 210, THA 231, THA 240. Offered Fall - Odd Numbered Years.

THA 342 Cr.3

Sound Design

The course provides the student with a working knowledge of sound design for theatre. It emphasizes the creation of sound environments for theatre through the use of modern digital and physical sound technology. The course also covers basic acoustics through the lens of theatrical sound. Prerequisite: THA 210. Offered Spring - Odd Numbered Years.

THA/MUS 347 Cr.3

Sound Recording and Engineering

Students will explore the theory, methods, and technologies of live sound engineering and sound recording. Through hands-on projects, students will learn basic acoustics, sound technologies, live sound mixing, as well as the recording and digital editing of music. Lect. 2, Lab 2. Prerequisite: junior standing. (Cross-listed with MUS/THA; may only earn credit in one department.) Offered Spring - Even Numbered Years.

THA 350 Cr.3

Theatre Studies II: 19th Century to the Present

This course is a survey of Western theatre history, dramatic literature and theory in cultural context from the 19th century to the present day. Particular attention is paid to realism and the explosion of styles in reaction to it, along with the study of political, environmental, feminist, multicultural, and postmodern theatre and performance art. Recommended to be taken after THA 250. Offered Fall - Even Numbered Years.

+THA 351 Cr.3

World Theatre

Survey of historical and contemporary theatre in cultural context from various cultures/geographic regions around the world. These areas include India and the near east, China, Japan, and the far east, Africa, Latin America, and the middle east. Particular attention is paid to local custom, religious practice and theatrical practice. Prerequisite: THA 110. Offered Spring - Odd Numbered Years.

THA 355 Cr.3

Dramaturgy

This course introduces students to the role of the dramaturg on a theatrical production. Students will learn to conduct historical, social, political, and cultural research and analysis, and develop best practices for sharing this information with actors, audiences, and creative teams in both print and digital formats. Prerequisite: THA 110 or THA 201 or THA 210 or THA 250. Offered Spring - Even Numbered Years.

THA 360 Cr.1-3

Theatre Arts Practicum

Specialized, intensive study and participation in theatre. Projects are designed in consultation with a faculty adviser in the department. Repeatable for credit - no maximum. Consent of instructor. Offered Fall, Spring, Summer.

+THA/ECO 376 Cr.3

Economics of Art and Entertainment

The overall goal of this course is to enable participants to make or evaluate selected decisions and policy issues pertaining to the arts and to better understand the unique status the arts hold in the American economy. Prerequisite: sophomore standing. (Cross-listed with ECO/THA; may only earn credit in one department.) Offered Spring - Odd Numbered Years.

THA 390 Cr.2

Advanced Stage Management

This course provides advanced study of the specific skills required of a stage manager on a theatrical production through discussion and hands-on projects designed to improve the student's understanding and execution of the leadership, organizational, and creative components of stage management. Repeatable for credit - maximum eight. Prerequisite: THA 290. Offered Fall.

THA 420 Cr.3

Directing

Theory and practice of directing for the stage. Emphasis on analysis, preparation and presentation of dramatic scenes. Prerequisite: THA 210, THA 220; six credits from THA 250, THA 350, THA 351. Offered Fall - Even Numbered Years.

THA 421 Cr.3

Performance Studio

This is an advanced performance studio that provides an opportunity for students to research, explore, and create performance within a specific style or genre. The course will provide directing and/or acting students with both theoretical and practical experiences in the art of theatre performance and will occasionally feature a guest artist. Examples of offerings include: improvisation, traditional (comedy of manners, commedia dell'arte) and non-traditional styles (absurdism, post-modernism, expressionism), auditioning and others. Repeatable for credit - no maximum. Prerequisite: THA 321 and/or THA 420. Offered Spring.

THA 422 Cr.3

Acting IV: Audition Techniques

This upper level acting course works specifically on the art and technique of auditioning. It will further develop and expand the range and skills of the performance student by exploring the audition process. Students will learn basic stage and camera audition techniques, develop an extensive repertoire of audition monologues and research career opportunities. It prepares the students for a variety of audition styles and situations. Prerequisite: THA 220, THA 320, THA 321. Offered Fall - Even Numbered Years.

THA 424 Cr.3

Composition of Dance

This course is an introduction to dance composition. Students use basic choreographic elements and principles to analyze and construct dance compositions. Through the use of improvisation, movement exploration, and the understanding and application of both traditional and experimental dance forms, students compose original solo and group studies. Through this exploration, students begin to discover the choreographic process as well as their choreographic voice. Offered Spring - Even Numbered Years.

THA 440 Cr.3

Costume Design/History

A course in the principles and practices of designing stage costumes. Emphasis on the creative capabilities of the designer with a working knowledge of historical periods used in stage costuming. Prerequisite: THA 210. Offered Spring - Odd Numbered Years.

THA 450 Cr.3-15

Internship in Theatre Arts

An academically relevant work experience focusing on career development through professional contexts. Students pursue practical applications of course work in community or professional theatre or related areas. A written project relating the internship experience to the academic preparation will be required. Credit depends on the demands and complexity and the duration of the work the student performs. Evaluation is a joint effort of the cooperating firm or group, the department supervisor, and the Cooperative Education Internship liaison. Note: three to six credit hours may count toward a theatre arts major in the College of Liberal Studies. Prerequisite: 15 credits in THA; junior standing. Consent of department. Offered Fall, Spring, Summer.

THA 471 Cr.3

Playwriting

A study of the fundamentals of playwriting, with emphasis on creating stageworthy plots, characters, dialogue and spectacle, and finding venues for having plays produced. Course will culminate in the writing of a one-act or full-length play. Offered Occasionally.

THA 472 Cr.3

Theatre Management

The principles and methods involved in the operation of the non-commercial theatre: organization, play selection, building an audience, publicity, advertising, graphic reproduction, ticket sales, box office routines, house management, touring, and business records. Prerequisite: THA 110, with the exception of theatre arts majors and minors; junior standing. Offered Spring - Even Numbered Years.

THA 474 Cr.3

Advanced Studies in Arts Administration

This course will provide advanced study in specific competencies required of an arts administrator including legal issues, arts policy, and audience development through discussion and hands-on projects. Prerequisite: THA 376 or THA 472. Offered Spring - Odd Numbered Years.

THA 481 Cr.1-3

Independent Study

Directed individual study under an assigned faculty member. Student is responsible for submitting study proposal for approval before registration. Repeatable for credit - no maximum. Prerequisite: junior standing. Consent of instructor. Offered Fall, Spring, Summer.

THA 482 Cr.1-3

Special Topics Theatre Arts

Workshops, directed individual readings, or projects involving significant content and/or activities not available through regular offerings within the Department of Theatre Arts. Repeatable for credit - no maximum. Consent of instructor. Offered Occasionally.

THA 490 Cr.3

Capstone Project in Theatre Arts

The Capstone project is an independent project that reflects the student's knowledge and abilities in theatre arts. It should integrate knowledge from coursework with practical experience in theatre production, and may focus on research, design, technical theatre, performance, directing, management or other area within theatre arts. The project should involve significant research, preparation, and presentation. The project may involve work in production, or in more traditional research. The student is responsible for developing and submitting a proposal for approval one semester in advance, under advisement of a faculty member in theatre arts. Prerequisite: senior standing. Consent of instructor. Offered Fall, Spring, Summer.

Therapeutic Recreation (RTH) - Courses

Courses

RTH 250 Cr.3

Introduction to Therapeutic Recreation

This course is designed as an introduction to the history and foundations of therapeutic recreation. Models of health care/human services and therapeutic recreation are presented. Students will gain knowledge of services and settings; professional, legal and community resources; professional and ethical behavior. Prerequisite: REC 150 or taken concurrently. Offered Fall, Spring.

RTH 252 Cr.3

Innovative Activities in Therapeutic Recreation

This course acquaints students who will work with persons with disabilities and special needs in therapeutic recreation settings with various recreation activities to enhance functional skills and foster meaningful recreation participation. Activity selection, analysis, planning, and modifications will be combined with various leadership styles. Prerequisite: REC 150, RTH 250. Offered Fall, Spring.

RTH 319 Cr.3

Management Functions in Therapeutic Recreation

This course provides students with perspectives on the management of therapeutic recreation services. The class will focus on first-line therapeutic recreation managers and the areas of management identified by the National Council of Therapeutic Recreation Certification (NCTRC). In-depth coverage is given to the five basic functions of management: planning, organization, staffing, influencing, and controlling. In addition, modules will be provided on key concepts integral to the management of therapeutic recreation programs, including internship supervision, clinical supervision, volunteer management, and managing marketing. Prerequisite: REC 150, RTH 250. Offered Fall, Spring.

RTH 329 Cr.3

Diagnostic Groups in Therapeutic Recreation

This course provides an understanding of the International Classification of Function Disability and Health (ICF) from the World Health Organization (WHO) framework for classifying the consequences of disease into diagnostic groups. The language of the ICF is neutral as to etiology, placing the emphasis on function rather than condition or disease. It also is carefully designed to be relevant across cultures as well as age groups and genders. A broad working knowledge of a variety of diagnostic groups and therapeutic recreation interventions for each will be provided. A focus on symptomology, etiology, prognosis, and remediation using therapeutic recreation interventions is included. In addition, how illness and disability affects the family will be discussed. Prerequisite: REC 150, RTH 250. Offered Fall, Spring, Summer.

RTH 333 Cr.3

Therapeutic Recreation and Corrections

This course provides an overview of the use of leisure and recreation for individuals in correctional settings. The following topics are addressed: settings, psychiatric disorders, laws/juvenile codes, intervention strategies, activity adaptations, current trends and the criminal justice system. Functional improvement, leisure education and recreation participation are the focus of therapeutic recreation services. Prerequisite: RTH 250 or RTH 329; RTH major/minor or CYC minor. Offered Fall.

RTH 355 Cr.3

Medical Language

An introduction to medical terminology with emphasis on word roots, combining forms, prefixes and suffixes through the various systems. There is also a unit on basic pharmacology. Prerequisite: REC 150 and RTH 250; or ESS pre-professional major. Offered Fall, Spring, Summer.

RTH 414/514 Cr.3

Adaptive Sports and Therapeutic Recreation

This course will provide an introduction to how therapeutic recreation specialists use adaptive sports, recreation, and leisure activities for individuals with disabilities to meet treatment goals and improve quality of life. Emphasis is given to the history and rules of a variety of adaptive sports, and possible settings where these could take place. The examination of each sport will include a focus on its connection to the therapeutic recreation profession. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: RTH 252, RTH 319, and RTH 329; admission to the therapeutic recreation program; junior standing. Offered Spring.

RTH 420 Cr.3

Nature and Forest Therapy

This course is designed to provide students with specialized sessions relating to nature-based therapy knowledge and application in outdoor leisure and therapeutic recreation settings from international and domestic perspectives. The course will provide special emphases on general nature-based therapy concepts and benefits, planning for nature-based therapy walks with various clients with and/or without special needs, the process of implementing nature-based therapy walks, actualizing mindfulness in nature, nature connection, relevant environmental literature (e.g., outdoor therapies related to trauma or depression), interactions between humans and environments, medicinal plants, and practice doing therapeutic walks. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: RTH 252, RTH 319, RTH 329; junior standing. Offered Fall, Summer.

RTH 430/530 Cr.3

Therapeutic Recreation and Mental Health

This course is designed to provide students with information regarding therapeutic recreation services to persons with mental illness, and substance abuse disorders, or individuals served in behavioral health treatment facilities. Course emphasizes mental health recovery, activities to facilitate change in different behavioral domains, therapeutic interventions for adults and children, treatment settings and services, and trends in recreation therapy program delivery. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: RTH 252, RTH 319, RTH 329; RTH major/minor or CYC minor; junior standing. Offered Fall.

RTH 432/532 Cr.3

Therapeutic Recreation for Persons With Physical Disabilities

This course is designed to provide students with information relating to therapeutic recreation services for individuals with physical disabilities. Programming considerations will include treatment concerns, community inclusion, wheelchair sports and leisure activities. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: RTH 252, RTH 319, RTH 329; RTH major/minor; junior standing. Offered Spring.

RTH 434/534 Cr.3

Therapeutic Recreation for Individuals with Intellectual and Developmental Disabilities

This course will introduce students to therapeutic recreation interventions and facilitation techniques commonly used by professionals who work with individuals who have intellectual and developmental disabilities. The course will emphasize behavioral and developmental approaches to working with this population and address the social and sensory needs of this population within a leisure context. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: RTH 252, RTH 319, RTH 329; RTH major/minor; junior standing. Offered Fall.

RTH 445/545 Cr.3

Recreational Therapy for Older Adults

This course teaches students to facilitate psychosocial intervention to address needs, strategies, techniques, and approaches for older adults with chronic health conditions through health promotion and leisure activities. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: RTH 252, RTH 319, RTH 329; junior standing. Offered Spring.

RTH 456/556 Cr.3

Program Design and Administration of Therapeutic Recreation

This course is designed to present a rationale and foundation for systematic program design, program implementation and program evaluation in various therapeutic recreation settings. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: STAT 145; RTH 252, RTH 319, RTH 329; RTH major or inclusive recreation minor; junior standing. Offered Fall, Spring.

RTH 462/562 Cr.3

Inclusive Recreation Program Administration

This course is designed to provide the student with information relating to recreation in inclusive settings. General Administration concepts, management concepts, advocacy, legislation, and therapeutic recreation as a related service in the schools will receive special emphasis in this course. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: RTH 355, RTH 456, RTH 470; junior standing. Offered Fall, Spring.

RTH 470/570 Cr.3

Facilitation Techniques in Therapeutic Recreation

This course presents an overview of concepts and interaction techniques used in the provision of goal-oriented therapeutic recreation services. Included are counseling techniques, leadership and instructional techniques appropriate for use in treatment, leisure education and recreation participation. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: STAT 145; RTH 252, RTH 319, RTH 329; RTH 456 or concurrent enrollment; RTH major/minor or CYC minor; junior standing. Offered Fall, Spring.

RTH 476/576 Cr.3

Assessment and Treatment Planning-Therapeutic Recreation

Overview of individual client assessments used in therapeutic recreation practice; development of individualized treatment/program plans in a therapeutic recreation context; review resources, standards and issues related to client assessment and program planning in therapy, leisure education and recreation participation programs. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: RTH 355, RTH 456, RTH 470; junior standing. Offered Fall, Spring.

RTH 480/580 Cr.3

Leisure Education in Therapeutic Recreation

This course is designed to provide a philosophical understanding and overview of leisure education as well as to emphasize the approaches and strategies that can be utilized in enabling people to enhance the quality of their own lives in leisure. The focus will be leisure education as a major component of therapeutic recreation services. Topics included are leisure theory, leisure education conceptual models, leisure education programming techniques, facilitation of leisure education groups for various ages. Gerontology students should have completed one core gerontology course and have permission from the director of therapeutic recreation. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: RTH 355, RTH 456, RTH 470; RTH major/minor or GTL emphasis; junior standing. Offered Fall, Spring.

RTH 490 Cr.1-3

Workshop in Therapeutic Recreation

Group study of varying therapeutic recreation topics. University professors as well as visiting lecturers will be invited to address the students and conduct specialized phases of the workshops. Repeatable for credit under different subtitles. Prerequisite: RTH major plan. No student may earn more than six credits in REC 375, RTH 490, REC 491, and RTH 491. Offered Occasionally.

RTH 491/591 Cr.1-3

Workshop in Therapeutic Recreation

Group study of varying therapeutic recreation topics. University professors as well as visiting lecturers will be invited to address the students and conduct specialized phases of the workshops. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Repeatable for credit under different subtitles. No student may earn more than six credits in REC 375, RTH 490, REC 491, and RTH 491. Offered Occasionally.

RTH 493/593 Cr.3

Therapeutic Recreation Trends and Issues

This course provides an examination of current issues, trends and professionalization concerns in therapeutic recreation, including professional organizations, ethics, current legislation, professional development, professional standards, credentialing, accreditation standards, improving organizational performance, and current professional controversies. Course should be taken the last semester prior to internship. This course is taught largely at an undergraduate level. Graduate students will have additional course requirements/expectations. Prerequisite: STAT 145; RTH 355, RTH 456, RTH 470; RTH major; junior standing. Offered Fall, Spring.

RTH 495 Cr.1-3

Independent Study in Therapeutic Recreation

Individualized study of areas not available in existing courses. Repeatable for credit - maximum six. Prerequisite: RTH major. Consent of department. Offered Fall, Spring, Summer.

RTH 496 Cr.3

Fieldwork Preparation in Therapeutic Recreation

This course prepares students for their senior fieldwork experience. Students are orientated to accreditation requirements, supported in facilitating their internship search, and afforded experiences in clinical skill assessment and evaluation. Upon completion of this course, students work to secure their required senior internship. This course should be taken two semesters prior to enrollment in RTH 498. Prerequisite: RTH 252, RTH 319, RTH 329; junior standing. Offered Fall, Spring.

RTH 497 Cr.1-3

Special Projects in Therapeutic Recreation

Individualized study areas not available in existing courses or independent study. Program project includes the planning, implementation, and evaluation of a project. These projects will be completed under the supervision and direction of a staff member with permission from the student's advisor within the department. Examples: wheelchair sports/coaching, wheel-a-thon, special recreation programs, Special Olympics, wheelchair dancing, and other events. Repeatable for credit - maximum six. Prerequisite: RTH 456; junior standing; consent of student's advisor; RTH major. Consent of instructor. Offered Fall, Spring, Summer.

RTH 498 Cr.12-16

Internship in Therapeutic Recreation

Application of the methods and techniques of therapeutic recreation, leadership, program development and administration through a supervised internship experience in therapeutic recreation, special recreation, leisure education and/or treatment programs. Prerequisite: senior standing; RTH major, all required REC/RTH courses completed; 2.50 cum GPA. American Red Cross Standard First Aid certification or its equivalent must be current throughout the RTH 498 experience. Offered Fall, Spring, Summer.

University-Wide Learning (UWL) - Courses

Courses

UWL 150 Cr.1

International Student Cultural Engagement

International students in this course will learn strategies to be successful in college. The focus will be on identifying and utilizing available college and community resources. Topics will include USA academic culture, immigration regulations, study skills, wellness, intercultural communication, and cultural awareness and reflection. Recommended for all entering new and transfer undergraduate international students. Prerequisite: new and/or transfer international student. Consent of department. Pass/Fail grading. Offered Fall, Spring.

UWL 199 Cr.1-3

Special Topics: New Student

Topics of interest to undergraduate students new to the university will be offered periodically with a focus on expanding traditional course content to specific applications. Offerings will be determined by student interest, programmatic needs, and availability of teaching resources. Repeatable for credit - maximum six. Departmental option for letter grade. Pass/Fail grading. Offered Occasionally.

UWL 299 Cr.1-3

Special Topics: Intermediate

Topics of interest to undergraduate students with some college experience from across the university will be offered periodically with a focus on expanding traditional course content to specific applications. Offerings will be determined by student interest, programmatic needs, and availability of teaching resources. Repeatable for credit - maximum six. Departmental option for letter grade. Depending on the specific topic to be addressed, prerequisites may be required. Pass/Fail grading. Offered Occasionally.

UWL 300 Cr.3-16

International Study Abroad

Resident study for an extended term at an approved university or other institution of higher education outside the United States. International study programs are available in virtually all major fields and in more than 50 countries around the world. Admission requirements, prerequisite, and costs vary. Complete information is available from the UWL Office of International Education & Engagement. Upon satisfactory completion of course work abroad, appropriate credits are entered upon the student's permanent record. Offered Fall, Winter, Spring, Summer.

UWL 399 Cr.1-3

Special Topics: Advanced

Topics of interest to undergraduate students with several years experience of college from across the university will be offered periodically with a focus on expanding traditional course content to specific applications. Offerings will be determined by student interest, programmatic needs, and availability of teaching resources. Repeatable for credit - maximum six. Departmental option for letter grade. Depending on the specific topic to be addressed, prerequisites may be required. Pass/Fail grading. Offered Occasionally.

UWL 499 Cr.1-3

Special Topics: Senior Advanced

Topics of interest to senior level undergraduate students across the university will be offered periodically with a focus on expanding traditional course content to specific applications. Offerings will be determined by student interest, programmatic needs, and availability of teaching resources. Repeatable for credit - maximum six. Departmental option for letter grade. Depending on the specific topic to be addressed, prerequisites may be required. Pass/Fail grading. Offered Occasionally.

Faculty and Staff

As of July 31, 2022, based on records provided by the UWL Human Resource Office. Academic staff includes 50% and above appointments.

Campus Resources	46	Communication Studies Minor: Public Communication and Advocacy Emphasis	139
Chemistry and Biochemistry Department (CHM)	413	Community Health Education (CHE) - Courses	664
Chemistry (CHM) - Courses	652	Computational Science (CMP) - Courses	665
Chemistry Major - Bachelor of Science (BS)	417	Computational Science Minor	436
Chemistry Major (with ACS Certification) - Bachelor of Science (BS) ..	419	Computational Science Program (CMP)	436
Chemistry Major with Business Concentration - Bachelor of Science (BS) ..	422	Computational Thinking (CT) - Courses	666
Chemistry Major with Environmental Science Concentration - Bachelor of Science (BS) ..	424	Computer Engineering (CPE) - Courses	666
Chemistry Major: Science Education (Grades 4-12) Concentration - Bachelor of Science (BS) ..	426	Computer Engineering Major - Bachelor of Science (BS) ..	438
Chemistry Minor	430	Computer Science (CS) - Courses	667
Child/Youth Care (CYC) - Courses	656	Computer Science Department (CS/CPE/CT)	437
Child/Youth Care Program (CYC)	114	Computer Science Major - Bachelor of Science (BS) ..	440
Chinese (CHI) - Courses	656	Computer Science Major - Computer Engineering Technology Emphasis - Bachelor of Science (BS) ..	443
Chinese Proficiency Certificate	199	Computer Science Major: Cybersecurity Emphasis - Bachelor of Science (BS) ..	444
Chinese Studies Minor	198	Computer Science Major: Embedded Systems Emphasis - Bachelor of Science ..	447
Clinical Laboratory Science - Bachelor of Science (BS) ..	430	Computer Science Minor	459
Clinical Laboratory Science (CLI) - Courses	657	Cooperative Education and Internship (CEI) - Courses	671
Clinical Laboratory Science Program (CLI)	430	Cooperative Education and Internships	45
Coaching Competitive Athletics Concentration	470	Course Descriptions - Undergraduate	630
College of Arts, Social Sciences, and Humanities (CASSH)/School of Visual and Performing Arts (VPA) ..	71	Course Information - Undergraduate	35
College of Business Administration (CBA) ..	338	Creative Writing Minor	163
College of Science and Health (CSH) ..	369	Criminal Justice Minor	277
Communication Studies (CST) - Courses	659	Criminal Justice Minor	303
Communication Studies Department (CST) ..	116	Cultural Anthropology Honors Program ..	90
Communication Studies Major: Interpersonal Communication Emphasis - Bachelor of Arts (BA) ..	117	Curriculum and Instruction (CI) - Courses ..	672
Communication Studies Major: Interpersonal Communication Emphasis - Bachelor of Science (BS) ..	120	D	
Communication Studies Major: Media Studies Emphasis - Bachelor of Arts (BA) ..	122	Dance Minor	336
Communication Studies Major: Media Studies Emphasis - Bachelor of Science (BS) ..	125	Degree Requirements - Undergraduate ..	60
Communication Studies Major: Organizational and Professional Communication Emphasis - BA ..	127	Diagnostic Medical Sonography (DMS) - Courses ..	672
Communication Studies Major: Organizational and Professional Communication Emphasis - BS ..	130	Digital Media Studies and Design Minor ..	140
Communication Studies Major: Public Communication and Advocacy Emphasis - Bachelor of Arts (BA) ..	132	Dual Degree Program in Biology and Physical Therapy ..	410
Communication Studies Major: Public Communication and Advocacy Emphasis - Bachelor of Science (BS) ..	135	Dual Degree Program in Chemistry and Engineering ..	428
Communication Studies Minor: Interpersonal Communication Emphasis ..	138	Dual Degree Program in Clinical Laboratory Science and Clinical Microbiology ..	433
Communication Studies Minor: Media Studies Emphasis ..	138	Dual Degree Program in Computer Science and Engineering ..	450
Communication Studies Minor: Organizational and Professional Communication Emphasis ..	139	Dual Degree Program in Computer Science and Master of Software Engineering ..	452
		Dual Degree Program in Computer Science: Cybersecurity and Master of Software Engineering ..	454
		Dual Degree Program in Computer Science: Embedded Systems and Master of Software Engineering ..	457
		Dual Degree Program in Mathematics and Engineering ..	503

Dual Degree Program in Physics and Engineering	544	English Honors Program	167
Dual Degree Program in Physics and Physical Therapy	546	English Language and Literature Minor	163
Dual Degree Program in Recreation Management: Generalist B.S. & Recreation Management M.S.	578	English Major: Literary and Cultural Studies Emphasis - Bachelor of Arts (BA)	148
Dual Degree Program in Recreation Management: Outdoor Recreation B.S. & Recreation Management M.S.	580	English Major: Medical Professions Emphasis - Bachelor of Arts (BA) .	152
Dual Degree Program in Recreation Mgmt: Community-Based Recreation B.S. & Recreation Management M.S.	575	English Major: Medical Professions Emphasis - Bachelor of Science (BS)	154
Dual Degree Program in Recreation Mgmt: Tourism & Event Management B.S. & Recreation Management M.S.	583	English Major: Writing and Rhetoric Studies Emphasis - Bachelor of Arts (BA)	157
Dual Degree Program in Statistics and Applied Statistics	504	Environmental Studies (ENV) - Courses	696
Dual Degree Program in Therapeutic Recreation B.S. and M.S.	586	Environmental Studies Minor	168
E		Environmental Studies Program (ENV)	167
Early Childhood Education (Birth-Grade 3) Major - Bachelor of Science (BS)	602	ESS Major: Physical, Adapted, and School Health Education (Grades K-12) - Bachelor of Science (BS)	466
Early Childhood Education (ECE) - Courses	675	Ethics Minor	264
Earth Science (ESC) - Courses	678	Ethnic and Racial Studies (ERS) - Courses	697
Earth Science Minor	486	Exercise and Sport Science Department (ESS)	460
Economics Department (ECO)	141	Exercise and Sport Science (ESS) - Courses	697
Economics Department (ECO)	344	Exercise and Sport Science Major: Exercise Science Fitness Track - Bachelor of Science (BS)	461
Economics (ECO) - Courses	678	Exercise and Sport Science Major: Exercise Science Pre-Professional Track - Bachelor of Science	463
Economics Honors Program	147	Exercise and Sport Science Major: Sport Management Emphasis - Bachelor of Science (BS)	468
Economics Honors Program	347	Expenses - Undergraduate	26
Economics Major - Bachelor of Arts (BA)	142	Expenses, Financial Aid, and Scholarships - Undergraduate	26
Economics Major - Bachelor of Science (BS)	145	F	
Economics Major - Bachelor of Science (BS)	345	Faculty and Staff	815
Economics Minor	147	Faculty and Staff - Emeriti	852
Economics Minor	347	Finance Department (FIN)	347
Educational Foundations (EFN) - Courses	680	Finance (FIN) - Courses	704
Educational Studies Department (EDS)	601	Finance Major - Bachelor of Science (BS)	348
Educational Studies (EDS) - Courses	681	Finance Major: Risk, Insurance, and Financial Planning Concentration - Bachelor of Science (BS)	350
Elementary/Middle Education (Grades K-9) and TESOL (Grades K-12) Major - Bachelor of Science (BS)	618	Financial Aid and Scholarships - Undergraduate	27
Elementary/Middle Education (K-9) and French Education (K-12) Major - Bachelor of Science (BS)	608	First-Year Seminar (FYS) - Courses	706
Elementary/Middle Education (K-9) and Spanish Education (K-12) Major - Bachelor of Science (BS)	611	French Education (Grades K-12) and TESOL (Grades K-12) Major - Bachelor of Science (BS)	179
Elementary/Middle Education (K-9) and Special Education (K-12) Major - Bachelor of Science (BS)	615	French Education (Grades K-12) Major - Bachelor of Science (BS)	176
Elementary/Middle Education Major (Grades K-9) - Bachelor of Science (BS)	605	French (FRE) - Courses	706
English as a Second Language (ESL) - Courses	693	French Major - Bachelor of Arts (BA)	171
English as a Second Language Program (ESL)	624	French Major with Business Concentration - Bachelor of Arts (BA)	174
English Department (ENG)	147	French Minor	198
English Education (Grades 4-12) Major - Bachelor of Science (BS)	160	French Proficiency Certificate	200
English (ENG) - Courses	685		

G

General Education Program	66
General Science for Teachers Minor	548
Geoarchaeology Minor	487
Geographic Information Science Certificate	488
Geographic Information Science Minor	487
Geography and Earth Science Department (GEO/ESC)	471
Geography and Earth Science Honors Program	488
Geography (GEO) - Courses	708
Geography Major: Environmental Science Concentration - Bachelor of Arts (BA)	472
Geography Major: Environmental Science Concentration - Bachelor of Science (BS)	474
Geography Major: Geographic Information Science Concentration - Bachelor of Arts (BA)	477
Geography Major: Geographic Information Science Concentration - Bachelor of Science (BS)	479
Geography Major: Humans and the Environment Emphasis - Bachelor of Arts (BA)	482
Geography Major: Humans and the Environment Emphasis - Bachelor of Science (BS)	484
German (GER) - Courses	712
German Studies Major - Bachelor of Arts (BA)	182
German Studies Major with Business Concentration - Bachelor of Arts (BA)	185
German Studies Minor	198
Gerontology Certificate	169
Gerontology Program (GTL)	169
Global Cultures and Languages Department (GCL)	170
Global Cultures and Languages (GCL) - Courses	713
Grading System, Grading and Credit Policies, and Final Exams - Undergraduate	37
Graduate & Extended Learning - Undergraduate	627
Graduation/Commencement - Undergraduate	39

H

Health and Wellness Management (HWM) - Courses	714
Health Education (HED) - Courses	716
Health Information Management and Technology (HIMT) - Courses ..	717
Health Information Management and Technology Major - Bachelor of Science (BS)	355
Health, Physical Education, and Recreation (HPR) - Courses	720
Health Professions Department (HP)	488
Health Professions (HP) - Courses	720
Healthcare Analytics Management Minor	365
History Department (HIS)	201

History (HIS) - Courses	720
History Major with Regional Emphasis - Bachelor of Arts (BA)	202
History Major with Regional Emphasis - Bachelor of Science (BS)	206
History Major with Topical Emphasis - Bachelor of Arts (BA)	210
History Major with Topical Emphasis - Bachelor of Science (BS)	214
History Major with World History Emphasis - Bachelor of Arts (BA) ...	219
History Major with World History Emphasis - Bachelor of Science (BS)	223
History Minor	227
Hmong and Hmong-American Studies Certificate	297
Hmong (HMG) - Courses	730
Human and Environmental Geography Minor	487
Human Rights and Criminal Justice Certificate	304

I

Inclusive Recreation Minor	588
Information Systems Department (IS)	352
Information Systems (IS) - Courses	730
Information Systems Major - Bachelor of Science (BS)	353
Information Systems Minor	358
International and Global Studies Minor	227
International and Global Studies Program (INS)	227
International Business (IB) - Courses	732
International Business Major - Bachelor of Science (BS)	359
International Business Minor	361
International Business Program (IB)	358
International Studies (INS) - Courses	732

J

Japanese (JPN) - Courses	732
--------------------------------	-----

L

Latina/o and Latin American Studies	229
Leadership Development Minor	141
Legal Studies Minor	277
Liberal Studies (LS) - Courses	733
Liberal Studies Program (LS)	229
Library Department	629
Linguistics Minor	164
Literary and Cultural Studies Minor	165

M

Majors, Minors, and Other Programs	13
Management Department (MGT)	361
Management Major - Bachelor of Science (BS)	362
Management (MGT) - Courses	733

Marketing Department (MKT)	365	Music (MUS) - Courses	747
Marketing Major - Bachelor of Science (BS)	366	Music Performance Minor	259
Marketing (MKT) - Courses	736	N	
Mathematics and Statistics Department (MTH/STAT)	489	Neuroscience Interdisciplinary Minor	287
Mathematics Education (Grades 4-12) Major - Bachelor of Science (BS)	497	Neuroscience (NEU) - Courses	757
Mathematics for Teachers Minor	507	Nuclear Medicine Technology Major - Bachelor of Science (BS)	520
Mathematics Honors Program	507	Nuclear Medicine Technology (NMT) - Courses	757
Mathematics Major - Bachelor of Arts (BA)	490	Nuclear Medicine Technology Program (NMT)	519
Mathematics Major - Bachelor of Science (BS)	493	Nutrition Minor	522
Mathematics Major with Applied Emphasis (BS)	495	Nutrition (NUT)	522
Mathematics Minor	507	Nutrition (NUT) - Courses	759
Mathematics (MTH) - Courses	738	O	
Microbiology Department (MIC)	508	On-Campus Life	55
Microbiology Honors Program	519	P	
Microbiology Major - Bachelor of Science (BS)	509	Philosophy Department (PHL)	259
Microbiology Major: Biomedical Concentration - Bachelor of Science (BS)	511	Philosophy Honors Program	265
Microbiology Major: Business Concentration - Bachelor of Science (BS)	514	Philosophy Major - Bachelor of Arts (BA)	260
Microbiology Major: Environmental Science Concentration - Bachelor of Science (BS)	516	Philosophy Major - Bachelor of Science (BS)	262
Microbiology (MIC) - Courses	743	Philosophy Minor	265
Microbiology Minor	519	Philosophy (PHL) - Courses	759
Military Science Department (MS)	229	Photography Minor	101
Military Science Minor	230	Physics and Astronomy Honors Program	549
Military Science (MS) - Courses	746	Physics Department (PHY)	523
Mindfulness (MIND) - Courses	747	Physics Major - Bachelor of Arts (BA)	523
Missions	10	Physics Major - Bachelor of Science (BS)	525
Murphy Library	628	Physics Major with Applied Emphasis - Bachelor of Science (BS)	527
Music Applied (MUA) - Courses	754	Physics Major with Astronomy Emphasis - Bachelor of Arts (BA)	529
Music Department (MUS)	231	Physics Major with Astronomy Emphasis - Bachelor of Science (BS)	531
Music Education Major: Choral and General Music Emphasis (Grades K-12) - Bachelor of Science (BS)	253	Physics Major with Biomedical Concentration - Bachelor of Science (BS)	533
Music Education Major: Instrumental and General Music Emphasis (Gr K-12) - Bachelor of Science (BS)	256	Physics Major with Business Concentration - Bachelor of Science (BS)	535
Music Major: Jazz Performance Emphasis - Bachelor of Arts (BA)	243	Physics Major with Computational Physics Emphasis - Bachelor of Science (BS)	537
Music Major: Jazz Performance Emphasis - Bachelor of Science (BS)	245	Physics Major with Optics Emphasis - Bachelor of Science (BS)	539
Music Major: Music Theory Emphasis - Bachelor of Arts (BA)	238	Physics Major: Science Education (Grades 4-12) Concentration - Bachelor of Science (BS)	541
Music Major: Music Theory Emphasis - Bachelor of Science (BS)	240	Physics Minor	548
Music Major: Performance Emphasis - Bachelor of Arts (BA)	233	Physics Minor with Astronomy Emphasis	549
Music Major: Performance Emphasis - Bachelor of Science (BS)	235	Physics (PHY) - Courses	762
Music Major: Piano Pedagogy - Bachelor of Arts (BA)	248	Political Science and Public Administration Department (POL/PUB) ..	265
Music Major: Piano Pedagogy - Bachelor of Science (BS)	250	Political Science and/or Public Administration Honors Program	278
Music Minor	259	Political Science Major - Bachelor of Arts (BA)	266

Political Science Major - Bachelor of Science (BS)	269
Political Science Minor	278
Political Science (POL) - Courses	767
Professional and Technical Writing Certificate	167
Professional and Technical Writing Minor	166
Psychology Department (PSY)	279
Psychology Honors Program	287
Psychology Major - Bachelor of Arts (BA)	280
Psychology Major - Bachelor of Science (BS)	283
Psychology Minor	286
Psychology (PSY) - Courses	771
Public Administration Major - Bachelor of Arts (BA)	272
Public Administration Major - Bachelor of Science (BS)	274
Public Administration Minor	278
Public Administration (PUB) - Courses	778
Public Health and Community Health Education Department (HED/CHE/ PH/HWM/SHE)	549
Public Health and Community Health Education Major - Bachelor of Science (BS)	551
Public Health (PH) - Courses	779
R	
Race, Gender, and Sexuality Studies Department (ERS/RGS)	287
Race, Gender, and Sexuality Studies Major - Bachelor of Arts (BA)	290
Race, Gender, and Sexuality Studies Major - Bachelor of Science (BS) .	293
Race, Gender, and Sexuality Studies Minor	296
Race, Gender, and Sexuality Studies (RGS) - Courses	779
Radiation Therapy (RT) - Courses	783
Radiologic Science Major: Diagnostic Medical Sonography with Echocardiography/Vascular Emphasis - BS	554
Radiologic Science Major: Diagnostic Medical Sonography with General/ Vascular Emphasis - BS	556
Radiologic Science Major: Radiation Therapy Emphasis - Bachelor of Science (BS)	559
Radiologic Science Major: Radiologic Technology Emphasis - Bachelor of Science (BS)	561
Radiologic Science Program (DMS/RT/RAD)	553
Radiologic Technology (RAD) - Courses	785
Reading (RDG) - Courses	787
Recreation Management and Therapeutic Recreation Department (REC/ RTH/MIND)	564
Recreation Management Major: Community-Based Recreation Emphasis - Bachelor of Science (BS)	565
Recreation Management Major: Generalist Emphasis - Bachelor of Science (BS)	567
Recreation Management Major: Outdoor Recreation Emphasis - Bachelor of Science (BS)	569

Recreation Management Major: Tourism and Event Management Emphasis - Bachelor of Science (BS)	571
Recreation Management Minor	589
Recreation Management Minor for Therapeutic Recreation Majors ...	589
Recreation Management (REC) - Courses	787
Registration and Schedules - Undergraduate	40
Russian (RUS) - Courses	790
Russian Studies Certificate	200

S

School Health Education (SHE) - Courses	791
School of Education (SOE)	591
Social Justice Minor	296
Society, Health, and Medicine Certificate	304
Sociology and Criminal Justice Department (SOC)	298
Sociology Honors Program	304
Sociology Major - Bachelor of Arts (BA)	299
Sociology Major - Bachelor of Science (BS)	301
Sociology Minor	304
Sociology (SOC) - Courses	791
Spanish Education (Grades K-12) and TESOL (Grades K-12) Major - Bachelor of Science (BS)	194
Spanish Education Major (Grades K-12) - Bachelor of Science (BS) ...	191
Spanish for Business and Organizations Certificate	200
Spanish for the Health Professions Certificate	201
Spanish Major - Bachelor of Arts (BA)	188
Spanish Minor	198
Spanish (SPA) - Courses	797
Special Education (SPE) - Courses	801
State Authorization	11
Statistics Major - Bachelor of Science (BS)	499
Statistics Major with Concentration in Actuarial Science - Bachelor of Science (BS)	501
Statistics Minor	507
Statistics (STAT) - Courses	804
Student Conduct	42
Sustainable Business Minor	368
Sustainable Business Program	368
T	
Teaching English to Speakers of Other Languages (TESOL) Minor	622
Teaching English to Speakers of Other Languages (TSL) - Courses ...	806
Theatre Arts Department (THA)	305
Theatre Arts Major: Arts Administration Emphasis - Bachelor of Arts (BA)	306

Theatre Arts Major: Arts Administration Emphasis - Bachelor of Science (BS)	308
Theatre Arts Major: Design/Technical Emphasis - Bachelor of Arts (BA)	310
Theatre Arts Major: Design/Technical Emphasis - Bachelor of Science (BS)	313
Theatre Arts Major: General Emphasis - Bachelor of Arts (BA)	316
Theatre Arts Major: General Emphasis - Bachelor of Science (BS)	318
Theatre Arts Major: Musical Theatre Emphasis - Bachelor of Arts (BA)	321
Theatre Arts Major: Musical Theatre Emphasis - Bachelor of Science (BS)	323
Theatre Arts Major: Performance Emphasis - Bachelor of Arts (BA) ...	326
Theatre Arts Major: Performance Emphasis - Bachelor of Science (BS)	328
Theatre Arts Major: Stage Management Emphasis - Bachelor of Arts (BA)	331
Theatre Arts Major: Stage Management Emphasis - Bachelor of Science (BS)	333
Theatre Arts Minor: Arts Administration Emphasis	337
Theatre Arts Minor: Design/Technical Emphasis	337
Theatre Arts Minor: General Emphasis	337
Theatre Arts Minor: Performance Emphasis	338
Theatre Arts Minor: Stage Management Emphasis	338
Theatre Arts (THA) - Courses	807
Therapeutic Recreation Major - Bachelor of Science (BS)	573
Therapeutic Recreation (RTH) - Courses	811
Tourism and Event Management Minor	589

U

Undergraduate Catalog	8
University Academic Calendar	12
University-Wide Learning (UWL) - Courses	813

V

Veteran Benefits	30
